### DESCRIPTION

The HEF4043B is a quadruple R/S latch with 3-state outputs with a common output enable input (EO). Each latch has an active HIGH set input (S<sub>0</sub> to S<sub>3</sub>), an active HIGH reset input (R<sub>0</sub> to R<sub>3</sub>) and an active HIGH 3-state output (O<sub>0</sub> to O<sub>3</sub>).

When EO is HIGH, the state of the latch output (O<sub>n</sub>) can be determined from the function table below. When EO is LOW, the latch outputs are in the high impedance OFF-state. EO does not affect the state of the latch.

The high impedance off-state feature allows common bussing of the outputs.

INPUTS			OUTPUT O <sub>n</sub>
EO	S <sub>n</sub>	R <sub>n</sub>	
L	X	X	Z
H	L	H	L
H	H	X	H
H	L	L	latched

### Notes

1. H = HIGH state (the more positive voltage)  
 L = LOW state (the less positive voltage)
