

MSM80C31F/MSM80C51F**CMOS 8-Bit Microcontroller****GENERAL DESCRIPTION**

The OKI MSM80C31F/MSM80C51F microcontroller is a low-power, 8-bit device implemented in OKI's silicon-gate complementary metal-oxide semiconductor process technology. The device includes 4K bytes of mask programmable ROM (MSM80C51F only), 128 bytes of data RAM, 32 I/O lines, two 16-bit timer/counters, a five-source two-level interrupt structure, a full duplex serial port, and an oscillator and clock circuitry. In addition, the device has two software selectable modes for further power reduction — Idle and Power Down. Idle mode freezes the CPU's in-instruction execution while maintaining RAM and allowing the timers, serial port and interrupt system to continue functions. Power Down mode saves the RAM contents but freezes the oscillator causing all other device functions to be inoperative.

FEATURES

- Low power consumption by 2 μm silicon gate CMOS process technology
- Fully static circuit
- Internal program memory : 4K bytes (MSM80C51F)
- External program memory space : 64K bytes
- Internal data memory (RAM) : 128 bytes
- External data memory (RAM) space : 64K bytes
- I/O ports : 8-bit \times 4 ports
- Two 16-bit timer/counters
- Multifunctional serial port (UART)
- Five interrupt sources (Priority can be set)
- Four sets of working registers (R0-7 \times 4)
- Stack : Internal data memory (RAM)
128-byte area can be used arbitrarily (by SP specified)
- Two CPU power-down modes
 - (1) Idle mode : CPU stopped while oscillation continued.
(Software setting)
 - (2) PD mode : CPU and oscillation all stopped.
(Software setting)
(Setting I/O ports to floating status possible)
- Operating temperature : -40 to $+85^\circ\text{C}$ (@ 12 MHz, $V_{CC} = 5\text{ V} \pm 20\%$)
 -20 to $+70^\circ\text{C}$ (@ 16 MHz, $V_{CC} = 5\text{ V} \pm 5\%$)
- 2-byte 1-machine cycle instructions : 1 μsec . @ 12 MHz
0.75 μsec . @ 16 MHz
- Multiplication/division instructions : 4 μsec . @ 12 MHz
3 μsec . @ 16 MHz
- Instruction code addressing method
 - Byte specification : Data addressing (direct)
 - Bit specification : Bit addressing

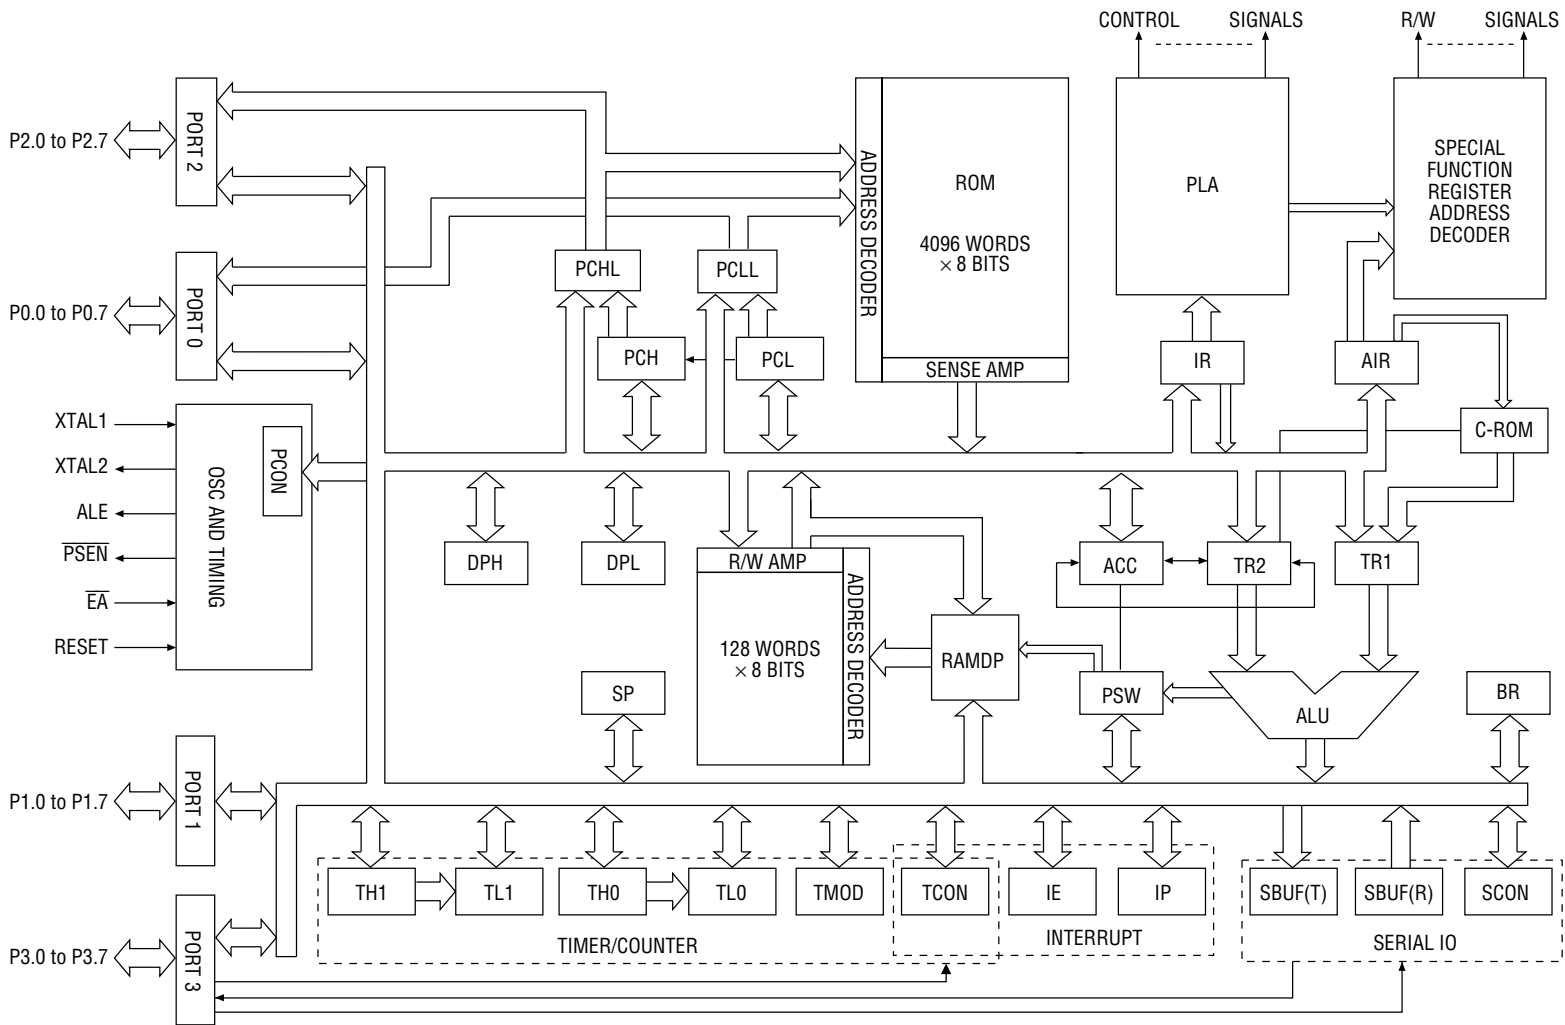

- Package options
 - 40-pin plastic DIP (DIP40-P-600-2.54) : (MSM80C31F-xxxRS) (MSM80C51F-xxxRS)
 - 44-pin plastic QFP (QFP44-P-910-0.80-2K) : (MSM80C31F-xxxGS) (MSM80C51F-xxxGS)
 - 44-pin plastic QFJ (PLCC) (QFJ44-P-S650-1.27) : (MSM80C31F-xxxJS) (MSM80C51F-xxxJS)
- xxx indicates the code number.

DIFFERENCES BETWEEN MSM80C31F/MSM80C51F AND MSM80C31/MSM80C51

- Operating frequency
 - 0.5 to 16 MHz MSM80C31F-1/MSM80C51F-1
 - 0.5 to 12 MHz MSM80C31/MSM80C51/MSM80C31F/MSM80C51F
- External clock input terminal
 - XTAL1 MSM80C31F(-1)/MSM80C51F(-1)
 - XTAL2 MSM80C31/MSM80C51
- Emulation mode
 - Output impedance of ALE and $\overline{\text{PSEN}}$ pins becomes about 20 kΩ while CPU is being reset in MSM80C31F/MSM80C51F.

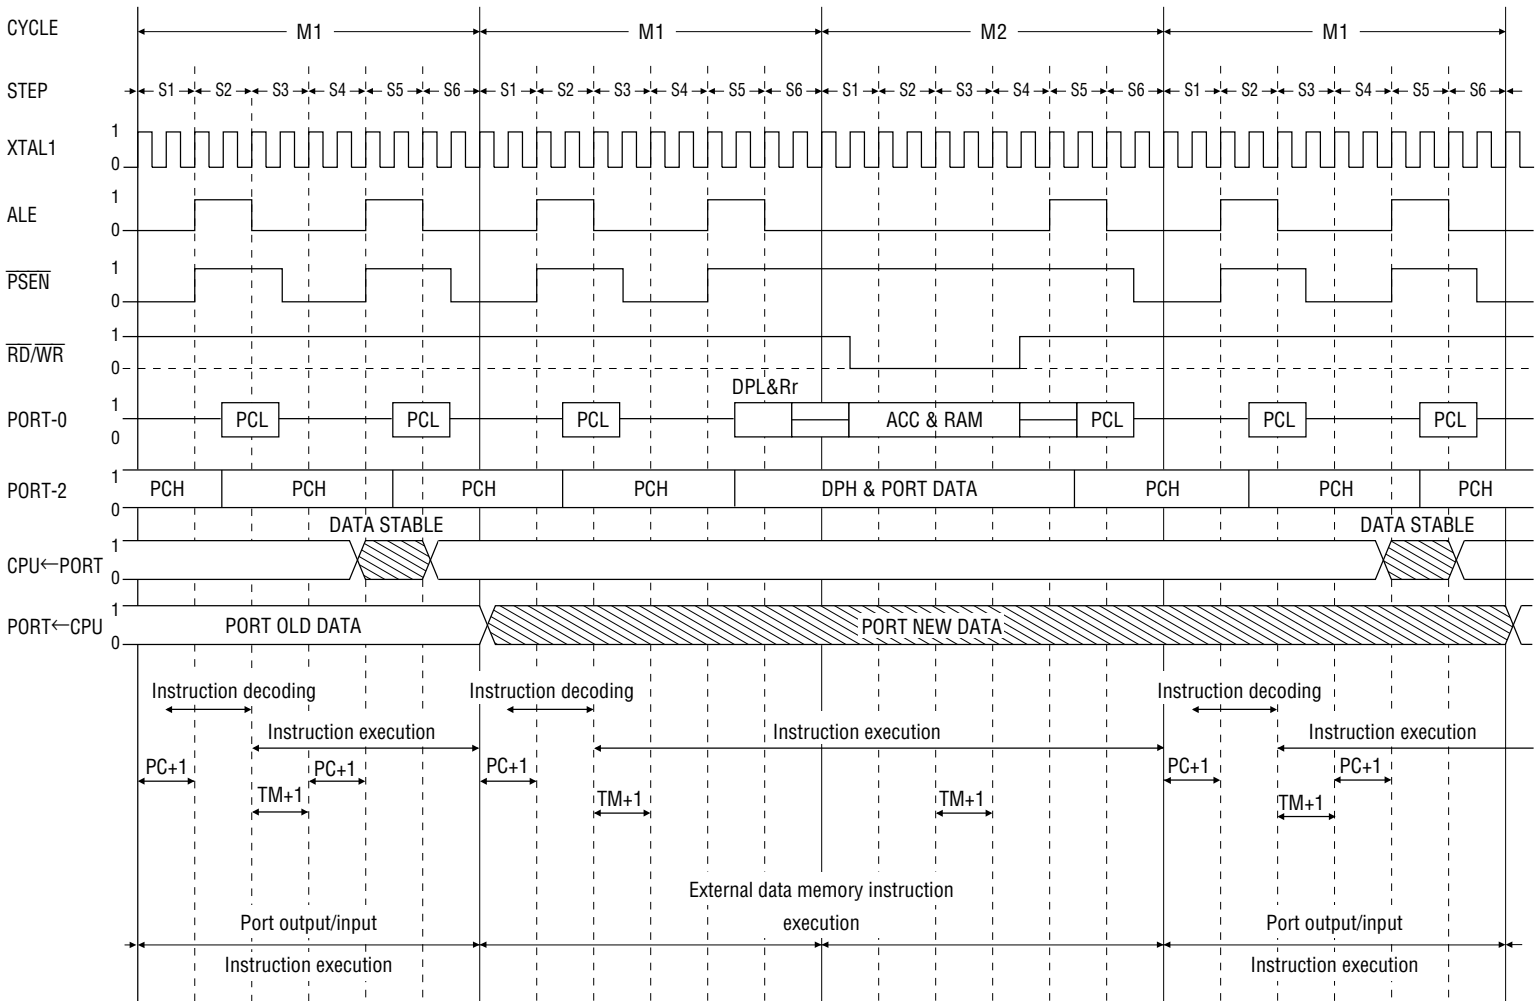

Any other functions and electrical characteristics of MSM80C31F/MSM80C51F except for above three differences are the same as those of MSM80C31/MSM80C51.

40-Pin Plastic DIP

PIN DESCRIPTION

Symbol	Description																		
V _{SS}	Ground potential																		
V _{CC}	Supply voltage during Normal, Idle and Power Down operation																		
Port 0.0 - 0.7	Port 0 is an 8-bit open-drain bidirectional I/O port. It is also the multiplexed low-order address and data bus during accesses to external memory.																		
Port 1.0 - 1.7	Port 1 is an 8-bit bidirectional I/O port with internal pull-ups. It can drive CMOS inputs without external pull-ups.																		
Port 2.0 - 2.7	Port 2 is an 8-bit bidirectional I/O port with internal pull-ups. It outputs the high-order address byte during accesses to external memory. It can drive CMOS inputs without external pull-ups.																		
Port 3.0 - 3.7	<p>Port 3 is an 8-bit bidirectional I/O port with internal pull-ups. It also provides various special features, as shown below:</p> <table border="0"> <thead> <tr> <th>Port Pin</th> <th>Alternate Function</th> </tr> </thead> <tbody> <tr> <td>P3.0</td> <td>RXD (serial input port)</td> </tr> <tr> <td>P3.1</td> <td>TXD (serial output port)</td> </tr> <tr> <td>P3.2</td> <td>INT0 (external interrupt)</td> </tr> <tr> <td>P3.3</td> <td>INT1 (external interrupt)</td> </tr> <tr> <td>P3.4</td> <td>T0 (Timer 0 external input)</td> </tr> <tr> <td>P3.5</td> <td>T1 (Timer 1 external input)</td> </tr> <tr> <td>P3.6</td> <td>WR (external data memory write strobe)</td> </tr> <tr> <td>P3.7</td> <td>RD (external data memory read strobe)</td> </tr> </tbody> </table> <p>Port 3 can drive CMOS inputs without external pull-ups.</p>	Port Pin	Alternate Function	P3.0	RXD (serial input port)	P3.1	TXD (serial output port)	P3.2	INT0 (external interrupt)	P3.3	INT1 (external interrupt)	P3.4	T0 (Timer 0 external input)	P3.5	T1 (Timer 1 external input)	P3.6	WR (external data memory write strobe)	P3.7	RD (external data memory read strobe)
Port Pin	Alternate Function																		
P3.0	RXD (serial input port)																		
P3.1	TXD (serial output port)																		
P3.2	INT0 (external interrupt)																		
P3.3	INT1 (external interrupt)																		
P3.4	T0 (Timer 0 external input)																		
P3.5	T1 (Timer 1 external input)																		
P3.6	WR (external data memory write strobe)																		
P3.7	RD (external data memory read strobe)																		
RESET	Reset input pin. A reset is accomplished by holding the RESET pin high for at least 1μs, even if the oscillator has been stopped. The CPU responds by executing an internal reset. An internal pull-down resistor permits Power-On reset using only a capacitor connected to V _{CC} . This pin does not receive the power down voltage since the function has been transferred to the V _{CC} pin.																		
ALE	Address Latch Enable. This output latches for latching the low byte of the address during accesses to external memory. For this purpose, ALE is activated twice every machine cycle or at a constant rate of 1/6th the oscillator frequency, except during an external memory access at which time one ALE pulse is skipped. ALE can drive CMOS inputs without an external pull-up.																		
$\overline{\text{PSEN}}$	Program Store Enable output. This output is the read strobe to external program memory. For this purpose, $\overline{\text{PSEN}}$ is activated twice every machine cycle. (However, when executing out of external program memory, two activations of $\overline{\text{PSEN}}$ are skipped during each access to external data memory.) $\overline{\text{PSEN}}$ is not activated during fetches from internal program memory. It can drive CMOS inputs without an external pull-up.																		
$\overline{\text{EA}}$	External Access input pin. When $\overline{\text{EA}}$ is held high, the CPU executes out of internal program memory (unless the program counter exceeds 0FFFH). When $\overline{\text{EA}}$ is held low, the CPU executes only out of external program memory. $\overline{\text{EA}}$ must not be floated.																		
XTAL1	Crystal 1 pin. It is an input to the inverting amplifier which forms the internal oscillator.																		
XTAL2	Crystal 2 pin. It is an output of the inverting amplifier that forms the internal oscillator.

INSTRUCTION LIST

List of Instruction Symbols

A	: Accumulator
AB	: Register pair
AC	: Auxiliary carry flag
B	: Arithmetic operation register
C	: Carry flag
DPTR	: Data pointer
PC	: Program counter
Rr	: Register indicator (r = 0 to 7)
SP	: Stack pointer
AND	: Logical product
OR	: Logical sum
XOR	: Exclusive-OR
+	: Addition
-	: Subtraction
X	: Multiplication
/	: Division
(X)	: Denotes the contents of X
((X))	: Denotes the contents of address determined by the contents of X
#	: Denotes the immediate data
@	: Denotes the indirect address
=	: Equality
≠	: Non-equality
←	: Substitution
→	: Substitution
—	: Negation
<	: Smaller than
>	: Larger than
bit address	: RAM and the special function register bit specifier address (b ₀ to b ₇)
code address	: Absolute address (A ₀ to A ₁₅)
data	: Immediate data (I ₀ to I ₇)
relative offset	: Relative jump address offset value (R ₀ to R ₇)
direct address	: RAM and the special function register byte specifier address (a ₀ to a ₇)

ABSOLUTE MAXIMUM RATINGS

Parameter	Symbol	Condition	Rating	Unit
Supply Voltage	V_{CC}	$T_a = 25^{\circ}\text{C}$	-0.5 to +7.0	V
Voltage from Any Pin to V_{SS}	V_I	$T_a = 25^{\circ}\text{C}$	-0.5 to $V_{CC} + 7.0$	V
Storage Temperature	T_{STG}	—	-55 to +150	$^{\circ}\text{C}$

OPERATING RANGE

Parameter	Symbol	Condition	Range	Unit
Supply Voltage	V_{CC}	See figure below	2.5 to 6 *1	V
Memory Retention Voltage	V_{CC}	$f_{osc} = \text{Oscillation stop}$	2 to 6	V
Oscillation Frequency	f_{osc}	See figure below	DC to 16 *2	MHz
Ambient Temperature	T_a	MSM80C31F/51F	-40 to +85	$^{\circ}\text{C}$
		MSM80C31F-1	-20 to +70	

*1 DC & AC characteristics in the range of $2.5\text{ V} \leq V_{CC} < 4\text{ V}$ will be specified by DC & AC Characteristics 2.

*2 Specify MSM80C31F-1 when using MSM80C31F at 12 MHz to 16 MHz.

GUARANTEED OPERATING RANGE

ELECTRICAL CHARACTERISTICS

DC Characteristics 1

(MSM80C31F/51F $V_{CC} = 5\text{ V} \pm 20\%$, $V_{SS} = 0\text{ V}$, $T_a = -40^\circ\text{C}$ to $+85^\circ\text{C}$)
 (MSM80C31F-1/51F-1 $V_{CC} = 5\text{ V} \pm 5\%$, $V_{SS} = 0\text{ V}$, $T_a = -20^\circ\text{C}$ to $+70^\circ\text{C}$)

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit	Measuring circuit
Low Input Voltage	V_{IL}	—	-0.5	—	$0.2 V_{CC} - 0.1$	V	1
High Input Voltage	V_{IH}	Except XTAL1, RESET and \overline{EA}	$0.2 V_{CC} + 0.9$	—	$V_{CC} + 0.5$	V	
High Input Voltage	V_{IH1}	XTAL1, RESET and \overline{EA}	$0.7 V_{CC}$	—	$V_{CC} + 0.5$	V	
Low Output Voltage (Port 1, 2 and 3)	V_{OL}	$I_{OL} = 1.6\text{ mA}$	—	—	0.45	V	
Low Output Voltage (Port 0, ALE and \overline{PSEN})	V_{OL1}	$I_{OL} = 3.2\text{ mA}$	—	—	0.45	V	
High Output Voltage (Port 1, 2 and 3)	V_{OH}	$I_{OH} = -60\ \mu\text{A}$ $V_{CC} = 5\text{ V} \pm 10\%$	2.4	—	—	V	
		$I_{OH} = -30\ \mu\text{A}$	$0.75 V_{CC}$	—	—	V	
		$I_{OH} = -10\ \mu\text{A}$	$0.9 V_{CC}$	—	—	V	
High Output Voltage (Port 0, ALE and \overline{PSEN})	V_{OH1}	$I_{OH} = -400\ \mu\text{A}$ $V_{CC} = 5\text{ V} \pm 10\%$	2.4	—	—	V	
		$I_{OH} = -150\ \mu\text{A}$	$0.75 V_{CC}$	—	—	V	
		$I_{OH} = -40\ \mu\text{A}$	$0.9 V_{CC}$	—	—	V	
Output Current at Low Input/High Output Power Supply	I_{IL} / I_{OH}	$V_I = 0.45\text{ V}$ $V_O = 0.45\text{ V}$	-10	—	-200	μA	2
Output Current (Port 1, 2 and 3) at transition from H to L	I_{TL}	$V_{IL} = 2.0\text{ V}$	—	—	-500	μA	
Input Leakage Current (Floating Port 0 and \overline{EA})	I_{LI}	$V_{SS} < V_I < V_{CC}$	—	—	± 10	μA	3
RESET Pull-down Resistor	R_{RST}	—	20	40	125	$\text{k}\Omega$	2
Input Pin Capacitor	C_{IO}	$T_a = 25^\circ\text{C}$, $f = 1\text{ MHz}$ 5 V (except XTAL1)	—	—	10	pF	—
Power Down Current	I_{PD}	$V_{CC} = 2\text{ V}$	—	1	50	μA	4

DC Characteristics 2

($V_{CC} = 2.5$ to 4.0 V, $V_{SS} = 0$ V, $T_a = -40$ to $+85^\circ\text{C}$)

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit	Measuring circuit

External Data Memory Read Cycle

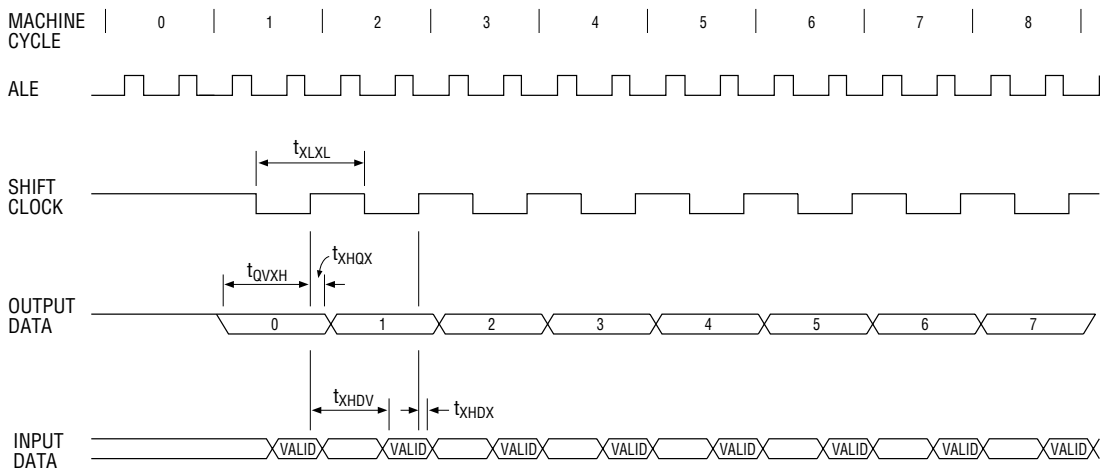

External Data Memory Write Cycle

Serial Port Timing (I/O Expansion Mode) AC Characteristics 1

(Ta = -40°C to +85°C ; VCC = 5 V ±20% ; VSS = 0 V)

Parameter	Symbol	Min.	Max.	Unit
Serial port clock cycle time	t_{XLXL}	$12t_{CLCL}$	—	ns
Output data setup to clock rising edge	t_{QVXH}	$10t_{CLCL} - 133$	—	ns
Output data hold after clock rising edge	t_{XHGX}	$2t_{CLCL} - 117$	—	ns
Input data hold after clock rising edge	t_{XHDX}	0	—	ns
Clock rising edge to input data valid	t_{XHDX}	—	$10t_{CLCL} - 133$	ns

Serial Port Timing (I/O Expansion Mode) AC Characteristics 2

(Ta = -40°C to +85°C ; V_{CC} = 2.5 to 4.0 V ; V_{SS} = 0 V)

Parameter	Symbol	Min.	Max.	Unit
Serial port clock cycle time	t _{XLXL}	12t _{CLCL}	—	ns
Output data setup to clock rising edge	t _{QVXH}	10t _{CLCL} - 133	—	ns
Output data hold after clock rising edge	t _{XHQX}	2t _{CLCL} - 117	—	ns
Input data hold after clock rising edge	t _{XHDX}	0	—	ns
Clock rising edge to input data valid	t _{XHDV}	—	10t _{CLCL} - 133	ns

AC Characteristics Measuring Conditions

Input/output signal

* The input signals in AC test mode are either V_{OH} (logic "1") or V_{OL} (logic "0") input signals where logic "1" corresponds to a CPU output signal waveform measuring point in excess of V_{IH} , and logic "0" to a point below V_{IL} .

Floating

* The port 0 floating interval is measured from the time the port 0 pin voltage drops below V_{IH} after sinking to GND at 2.4 mA when switching to floating status from a "1" output, and from the time the port 0 pin voltage exceeds V_{IL} after connecting to a 400 μ A source when switching to floating status from a "0" output.

XTAL1 External Clock Input Waveform Conditions

Parameter	Symbol	Variable Clock		
		See Guaranteed Operating Range		
		Min.	Max.	Unit
External Clock Frequency	$1/t_{CLCL}$	DC	16	MHz
High Time	t_{CHCX}	20	—	ns
Low Time	t_{CLCX}	20	—	ns
Rise Time	t_{CLCH}	—	20	ns
Fall Time	t_{CHCL}	—	20	ns

PACKAGE DIMENSIONS

(Unit : mm)

(Unit : mm)

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, TQFP, LQFP, SOJ, QFJ (PLCC), SHP, and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage. Therefore, before you perform reflow mounting, contact Oki's responsible sales person on the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

NOTICE

1. The information contained herein can change without notice owing to product and/or technical improvements. Before using the product, please make sure that the information being referred to is up-to-date.
2. The outline of action and examples for application circuits described herein have been chosen as an explanation for the standard action and performance of the product. When planning to use the product, please ensure that the external conditions are reflected in the actual circuit, assembly, and program designs.
3. When designing your product, please use our product below the specified maximum ratings and within the specified operating ranges including, but not limited to, operating voltage, power dissipation, and operating temperature.
4. Oki assumes no responsibility or liability whatsoever for any failure or unusual or unexpected operation resulting from misuse, neglect, improper installation, repair, alteration or accident, improper handling, or unusual physical or electrical stress including, but not limited to, exposure to parameters beyond the specified maximum ratings or operation outside the specified operating range.
5. Neither indemnity against nor license of a third party's industrial and intellectual property right, etc. is granted by us in connection with the use of the product and/or the information and drawings contained herein. No responsibility is assumed by us for any infringement of a third party's right which may result from the use thereof.
6. The products listed in this document are intended for use in general electronics equipment for commercial applications (e.g., office automation, communication equipment, measurement equipment, consumer electronics, etc.). These products are not authorized for use in any system or application that requires special or enhanced quality and reliability characteristics nor in any system or application where the failure of such system or application may result in the loss or damage of property, or death or injury to humans. Such applications include, but are not limited to, traffic and automotive equipment, safety devices, aerospace equipment, nuclear power control, medical equipment, and life-support systems.
7. Certain products in this document may need government approval before they can be exported to particular countries. The purchaser assumes the responsibility of determining the legality of export of these products and will take appropriate and necessary steps at their own expense for these.
8. No part of the contents contained herein may be reprinted or reproduced without our prior permission.
