

# BTL driver for CD-ROMs

## BA5972FP

The BA5972FP is a 4-channel BTL driver developed for use with CD-ROMs. A multi-purpose operational amplifier is equipped in each channel to allow use in a variety of applications. Also, by applying independent power supplies for both the pre-stage and power-stage, with the power-stage power supply further split into two so one power supply handles two channels each, a highly efficient driver has been realized.

### ●Applications

CD-ROM, DVD-ROM, MD, and optical discs

### ●Features

- 1) Wide dynamic range ( $V_{OUT} = 4V$  [Typ.] when  $PreV_{CC} = 8V$ ,  $PowV_{CC} = 5V$ , and  $R_L = 8\Omega$ ).
- 2) Internal thermal shutdown circuit.
- 3) Internal mute functions.
- 4) Internal standby functions.

### ●Absolute maximum ratings ( $T_a = 25^\circ C$ )

Parameter	Symbol	Limits	Unit
Power supply voltage	$PreV_{CC}, PowV_{CC}$	13.5	V
Power dissipation	$P_d$	1.7*1	W
Operating temperature	$T_{opr}$	$-35 \sim +85$	$^\circ C$
Storage temperature	$T_{stg}$	$-55 \sim +150$	$^\circ C$

\*1 When mounted on a 70mm × 70mm × 1.6mm glass epoxy board with copper foil coverage of less than 3%.  
Reduced by 13.6mW for each increase in  $T_a$  of 1 $^\circ C$  over 25 $^\circ C$ .

### ●Recommended operating conditions ( $T_a = 25^\circ C$ )

Parameter	Symbol	Limits	Unit
Power supply voltage	$PreV_{CC}$	4.5~13.2	V
	$PowV_{CC}$	4.5~ $PreV_{CC}$	V

## ● Block diagram

## ● Pin descriptions

Pin No.	Pin name	Function	Pin No.	Pin name	Function
1	BIAS IN	Bias amplifier input	15	V <sub>O4</sub> (+)	Driver channel 4 positive output
2	OPIN1 (+)	Channel 1 pre-amplifier non-inverse input	16	V <sub>O4</sub> (-)	Driver channel 4 negative output
3	OPIN1 (-)	Channel 1 pre-amplifier inverse input	17	V <sub>O3</sub> (+)	Driver channel 3 positive output
4	OPOUT1	Channel 1 pre-amplifier output	18	V <sub>O3</sub> (-)	Driver channel 3 negative output
5	OPIN2 (+)	Channel 2 pre-amplifier non-inverse input	19	PowV <sub>cc</sub>	PowV <sub>cc</sub> (channels 3 and 4)
6	OPIN2 (-)	Channel 2 pre-amplifier inverse input	20	STN-BY	Standby
7	OPOUT2	Channel 2 pre-amplifier output pin	21	GND	GND
8	GND	GND	22	OPOUT3	Channel 3 pre-amplifier output
9	MUTE	Mute control for all channels	23	OPIN3 (-)	Channel 3 pre-amplifier inverse input
10	PowV <sub>cc</sub>	PowV <sub>cc</sub> (channels 1 and 2)	24	OPIN3 (+)	Channel 3 pre-amplifier non-inverse input
11	V <sub>O2</sub> (-)	Driver channel 2 negative output	25	OPOUT4	Channel 4 pre-amplifier output
12	V <sub>O2</sub> (+)	Driver channel 2 positive output	26	OPIN4 (-)	Channel 4 pre-amplifier inverse input
13	V <sub>O1</sub> (-)	Driver channel 1 negative output	27	OPIN4 (+)	Channel 4 pre-amplifier non-inverse input
14	V <sub>O1</sub> (+)	Driver channel 1 positive output	28	PreV <sub>cc</sub>	PreV <sub>cc</sub>

Note: Positive output and negative output are the polarities with respect to the input.  
(For example, if pin 4 voltage is high, then pin 14 voltage becomes high.)

## ● Measurement circuit switch table

(1) Circuit current and standby ( $V_{MT} = 0V$ ,  $V_{IN} = 2.5V$ ,  $R_L \rightarrow OFF$ ,  $OPB \rightarrow 1$ ,  $NF \rightarrow 1$ ,  $OPRL \rightarrow 1$ )

Symbol	Input	Remarks	Measurement point
	$V_{ST}$		
$I_O$	5V	—	$I_O$
$I_{ST}$	0V	—	$I_O$
$V_{STON}$	0.5V	—	$I_O$
$V_{STOFF}$	2.0V	—	$I_O$

(2) Driver block ( $V_{ST} = 5V$ ,  $R_L \rightarrow ON$ ,  $OPB \rightarrow 1$ ,  $NF \rightarrow 1$ ,  $OPRL \rightarrow 1$ )

Symbol	Input		Remarks	Measurement point
	$V_{IN}$	$V_{MT}$		
$V_{OO1}$	2.5V	0.5V	—	$V_O$ (channel 1, 2)
$V_{OO2}$	2.5V	0.5V	—	$V_O$ (channel 3, 4)
$V_{OOM1}$	$\pm 2.0V$	0.5V	$V_{IN} = 0.5V$ and $4.5V$	$V_O$ (channel 1, 2)
$V_{OOM2}$	$\pm 2.0V$	0.5V	$V_{IN} = 0.5V$ and $4.5V$	$V_O$ (channel 3, 4)
$G_{VC1}$	$\pm 0.5V$	0.5V	$V_{IN} = 2.0V$ and $3.0V$	$V_O$ (channel 1, 2)
$G_{VC2}$	$\pm 0.5V$	0.5V	$V_{IN} = 2.0V$ and $3.0V$	$V_O$ (channel 3, 4)
$V_{MTON}$	3.0V	2.0V	Verify output voltage is muted	$V_O$
$V_{MTOFF}$	3.0V	0.5V	Verify output voltage is muted	$V_O$

(3) Pre-stage operational amplifier block ( $V_{ST} = 5V$ ,  $V_{MT} = 0V$ ,  $R_L \rightarrow OFF$ )

Symbol	Switch			Input	Remarks	Measurement point
	OPB	NF	OPRL	$V_{IN}$		
$V_{OFOP}$	1	1	1	2.5V	—	$V_{IOF}$
$V_{BOP}$	3	2	1	2.5V	—	$V_{BOP}/1M\Omega$
$V_{OHOP}$	1	1	1	5V	—	$V_{OOP}$
$V_{OLOP}$	1	1	1	0V	—	$V_{OOP}$
$I_{SI}$	1	1	3	2.5V	—	$V_{DROP}/50\Omega$
$I_{SO}$	1	1	2	2.5V	—	$V_{DROP}/50\Omega$
$S_{ROP}$	2	1	1	$\pm 1V$	100kHz rectangular wave, $2.5 \pm 1V$ input	$V_{OOP}$

●Application example

Fig.2

### ● Operation notes

(1) The BA5972FP contains a thermal shutdown circuit.

When the chip temperature reaches 175°C (Typ.), the output current is muted. If the chip temperature then drops below 150°C (Typ.), then the mute is released.

(2) By having the mute pin (pin 7) voltage pulled up to 2.0V or greater, you can mute the output current for channels 1 and 4. For normal conditions, have pin 7 open or at 0.5V or below.

(3) If the voltage of the bias pin (pin 1) drops below 1.4V (Typ.), outputs are muted.

For normal conditions, have the voltage above 1.7V.

(4) If the power supply voltage drops below 3.8V (Typ.), internal circuits turn off. If the power supply voltage then rises to 4.0V (Typ.), the circuits turn on.

(5) If the voltage of the thermal shutdown, mute ON, or bias pin drops, or if the power supply voltage drops, the mute is activated; however, in these situations, only the drivers are muted.

Also, the output pin voltage becomes the internal bias voltage (approx.  $V_{cc}/2$ ).

(6) If the standby pin voltage is open or 0.5V or below, the circuit current enters the standby condition.

For normal operation, have the standby pin voltage pulled up to 2.0V or greater.

(7) Connect a bypass capacitor (approx. 0.1 $\mu$ F) between the bases of the power supply pins of this IC.

(8) Even though the radiation fins are connected to ground within the package, be sure to also connect them to a ground externally as well.

(9) The application example will assure excellent results, but nevertheless, be sure to carefully check all characteristics during use. During use with constants in the external circuitry modified, be sure to leave a sufficient margin in order to take into consideration fluctuations in the static and transient characteristics of the external components and this IC.

Also, be aware that ROHM has not sufficiently performed all confirmations regarding patent rights.
