

1A STEP DOWN SWITCHING REGULATOR

- UP TO 1A STEP DOWN CONVERTER
- OPERATING INPUT VOLTAGE FROM 8V TO 55V
- PRECISE 5.1V REFERENCE VOLTAGE
- OUTPUT VOLTAGE ADJUSTABLE FROM 3.3V TO 50V
- SWITCHING FREQUENCY ADJUSTABLE UP TO 500KHz
- VOLTAGE FEEDFORWARD
- ZERO LOAD CURRENT OPERATION
- INTERNAL CURRENT LIMITING (PULSE-BY-PULSE AND HICCUP MODE)
- PROTECTION AGAINST FEEDBACK DISCONNECTION
- THERMAL SHUTDOWN

DESCRIPTION

The L4976 is a step down monolithic power switching regulator delivering 1A at a voltage between 3.3V and 50V (selected by a simple external divider). Realized in BCD mixed technology, the device uses an internal power D-MOS transistor (with a typical $R_{DS(on)}$ of 0.25Ω) to obtain very high efficiency and high switching speed.

A switching frequency up to 250Khz is achievable (the maximum power dissipation of the pack-

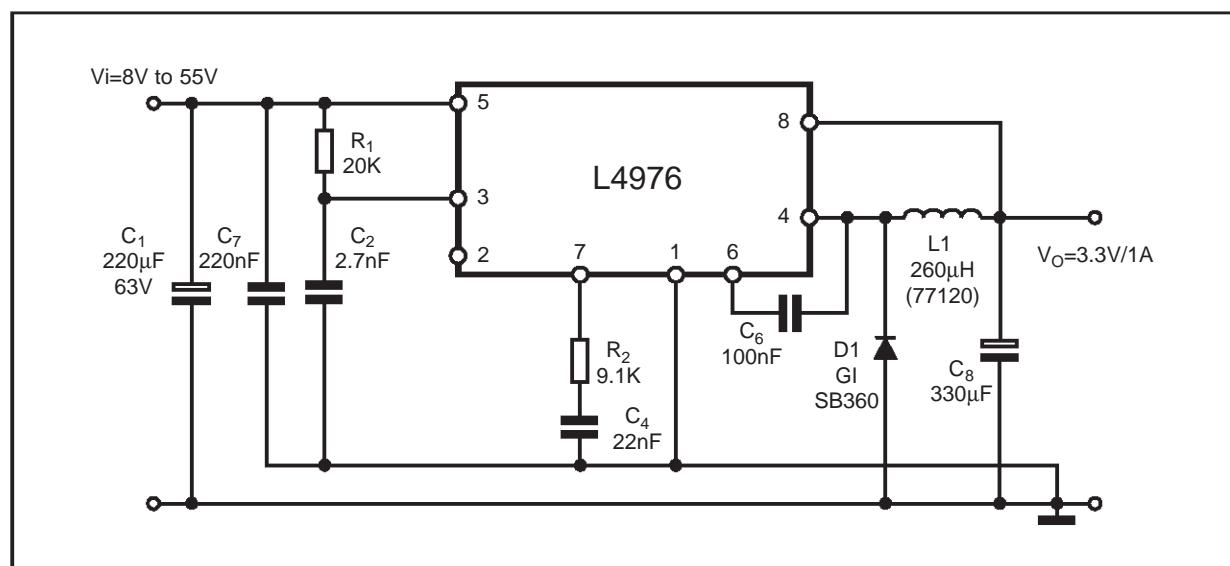

ages must be observed).

A wide input voltage range between 8V to 55V and output voltages regulated from 3.3V to 40V cover the majority of today's applications.

Features of this new generations of DC-DC converter include pulse-by-pulse current limit, hiccup mode for short circuit protection, voltage feedforward regulation, protection against feedback loop disconnection and thermal shutdown.

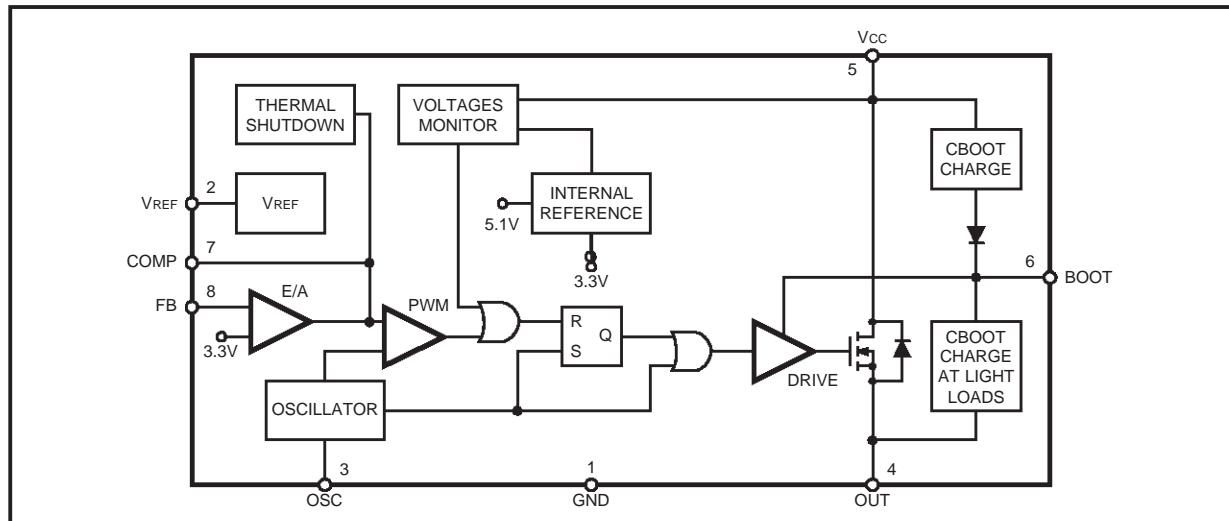

The device is available in plastic dual in line, MINIDIP 8 for standard assembly, and SO16W for SMD assembly.

TYPICAL APPLICATION CIRCUIT

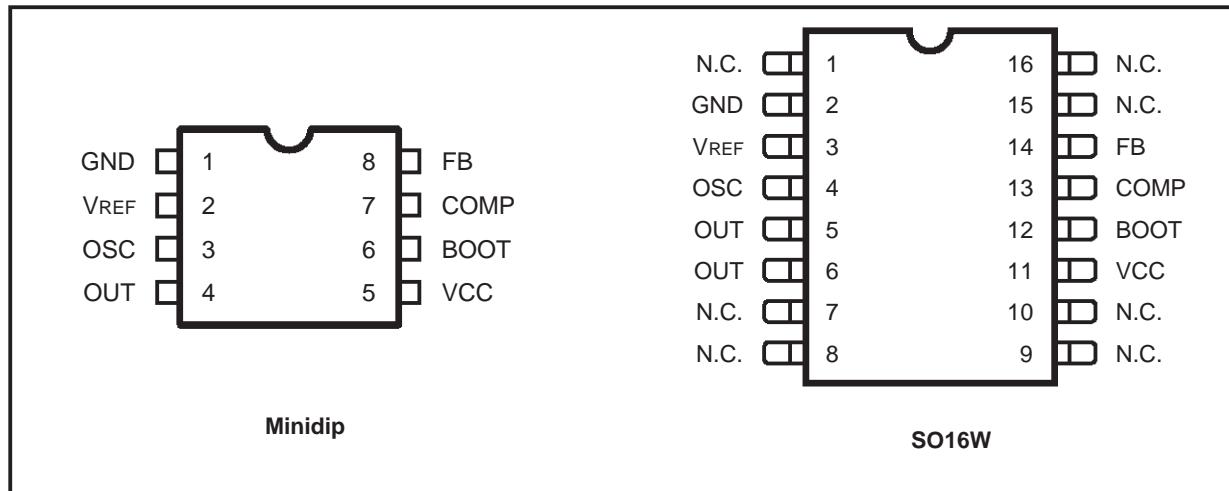

L4976

BLOCK DIAGRAM

PIN CONNECTIONS

PIN FUNCTIONS

DIP	SO (*)	Name	Function
1	2	GND	Ground
2	3	VREF	5.1V Reference voltage with 20mA current capability.
3	4	OSC	An external resistor connected between the unregulated input voltage and this pin and a capacitor connected from this pin to ground fix the switching frequency. (Line feed forward is automatically obtained)
4	5, 6	OUT	Stepdown regulator output
5	11	Vcc	Unregulated DC input voltage
6	12	BOOT	A capacitor connected between this pin and OUT allows to drive the internal VDMOS
7	13	COMP	E/A output to be used for frequency compensation
8	14	FB	Stepdown feedback input. Connecting directly to this pin results in an output voltage of 3.3V. An external resistive divider is required for higher output voltages.

(*) Pins 1, 7, 8, 9, 10, 15 and 16 are not internally, electrically connected to the die.
