

# CT1469-2

## MIL-STD-1397 Type E 10MHz Transceiver

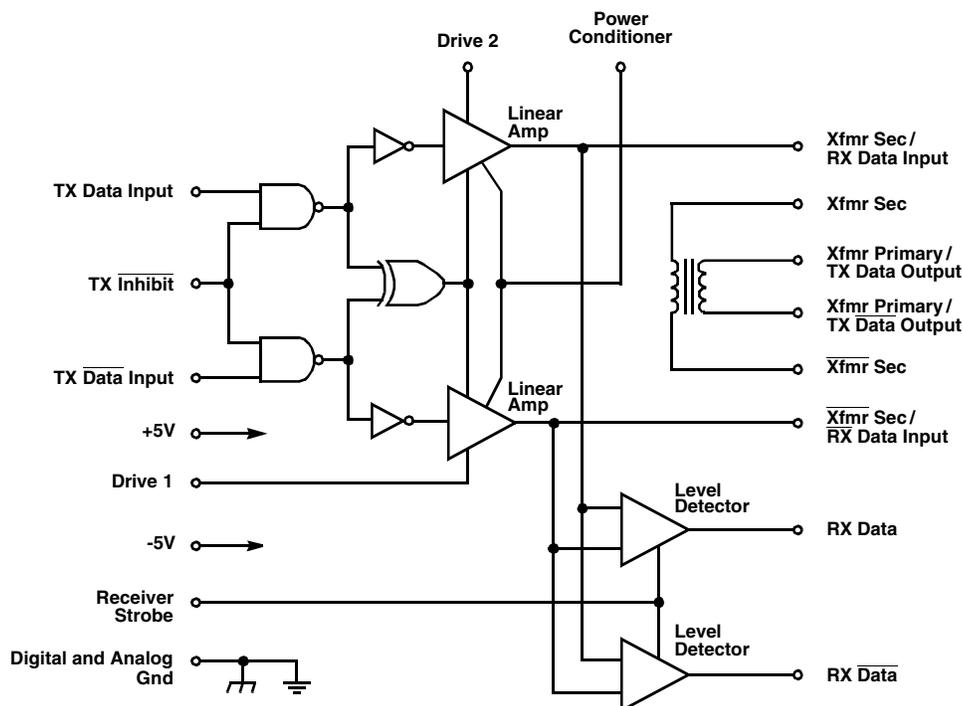

### Features

- Low Level  $\pm 0.65V$  output
- Optional transformer isolation
- Internally set threshold
- Operates with  $\pm 5$  volt supply
- Matched to 50 ohms system impedance power on or off
- Bipolar construction for radiation resistance
- Power management
- Interfaces directly to the CT1496-2 (Manchester Encoder) and CT1508-2 (Manchester Decoder)
- MIL-PRF-38534 compliant devices available

### General Description

CT1469-2 is a hybrid microcircuit which incorporates a MIL-STD 1397 Type E 10MHz transceiver in a single package. The transmitter section accepts 10MHz serial Manchester encoded TTL NRZ data from the encoder and transformer couples a bipolar  $\pm 0.65$  volt (nominal) signal level to a 50 ohm triaxial cable for transmission up to 1000 ft. The CT1469-2 receiver accepts a bipolar signal level and outputs an NRZ TTL serial data or SIS/SOS signal to the decoder (CT1508-2). Aeroflex Circuit Technology is a 80,000 square foot MIL-PRF-38534 certified facility in Plainview, N.Y.

## **Introduction**

The specification detailed herein encompasses a hybrid transceiver designed to meet the requirements of STANAG 4153 and Type E requirements of MIL-STD-1397. The transceiver is transformer coupled to the specified triaxial cable and is available compliant to MIL-PRF 38534.

## **Electrical Requirements**

See Figure 1 for block diagram. All input and output signals are manchester encoded. The transformer is internal to the package with its use being optional.
