

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

**TC74HC4017AP, TC74HC4017AF****DECade Counter / Divider**

The TC74HC4017A is a high speed CMOS DECADE JOHNSON COUNTER fabricated with silicon gate C<sup>2</sup>MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

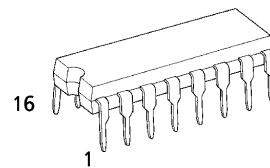

It contains 5-stage divided-by-10 Johnson counter with 10 decoded output (Q0 - Q9) and carry-out bit.

This counter is advanced on the positive edge of clock signal when clock enable signal ( $\overline{CE}$ ) input is held low, or it is advanced on the negative edge of the  $\overline{CE}$  when CK input is held high, and selected one of ten outputs goes high. Holding high the CLR input, this counter is cleared to its zero state without regard to the other input conditions.

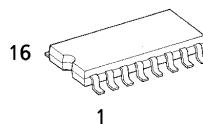

All inputs are equipped with protection circuits against static discharge or transient excess voltage.
