

LC374100SM, ST

4 MEG (524288 words× 8 bits) Mask ROM Internal Clocked Silicon Gate

Preliminary

Overview

The LC374100SM and LC374100ST are 524,288-word \times 8-bit organization (4,194,304-bit) mask programmable read only memories. They feature a wide operating voltage range (2.6 to 5.5 V), a 100-ns access time (t_{CA}) at V_{CC} = 4.5 to 5.5 V, and a 200-ns access time at V_{CC} = 2.6 to 3.3 V.

Features

- 524288 words × 8 bits organization
- Power supply voltage range: 2.6 to 5.5 V
- Fast access time(t_{AA}): 120 ns (max.) $V_{CC} = 4.5$ to 5.5 V

(t_{CA}): 100 ns (max.) $V_{CC} = 4.5$ to 5.5 V 200 ns (max.) $V_{CC} = 2.6$ to 5.5 V

Operating current: 55 mA (max.)
Standby current: 30 μA (max.)
Full static operation (internal clocked type)

• 3 state outputs

• JEDEC standard pin configuration

· Package type

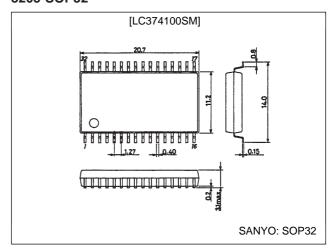

LC374100SM: SOP32 (525 mil)

LC374100ST: TSOP32 (8 mm \times 20 mm)

Package Dimensions

System Design Notes

These ICs adopt the ATD technique, in which operation starts when a change in either the $\overline{\text{CE}}$ or address inputs is detected. This means that the output data immediately after power is applied is invalid. When using these ICs as program memory for Z80 and similar microprocessors, applications must take into account the fact that valid data will not be output after power is first applied unless the value of either the $\overline{\text{CE}}$ or at least one of the address lines is changed after the power supply has stabilized.

Another point due to the use of the ATD technique is that these ICs are sensitive to input noise. Do not apply voltages outside the allowable DC input levels for extended periods and do not apply input voltages with large noise components.
