

**400MHz Quadrature Modulator and AGC**

The HFA3763 is a highly integrated baseband converter for quadrature modulation applications. The HFA3763 400MHz quadrature modulator and AGC is one of the seven chips in the

PRISM® full duplex chip set (see Typical Application Diagram). It features all the necessary blocks for baseband modulation of I and Q signals. An output AGC and Baseband shaping filters are integrated in the design. Four filter bandwidths are programmable via a two bit digital control interface. In addition, these filters are continuously tunable over a ±20% frequency range via one external resistor. The modulator channel receives digital or analog I and Q data for processing. To achieve broadband operation, the Local Oscillator frequency input is required to be twice the desired frequency of modulation. A selectable buffered divide by 2 LO output and a stable reference voltage are provided for convenience of the user.

**Ordering Information**

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
HFA3763IN	-40 to 85	80 Ld TQFP	Q80.14x14

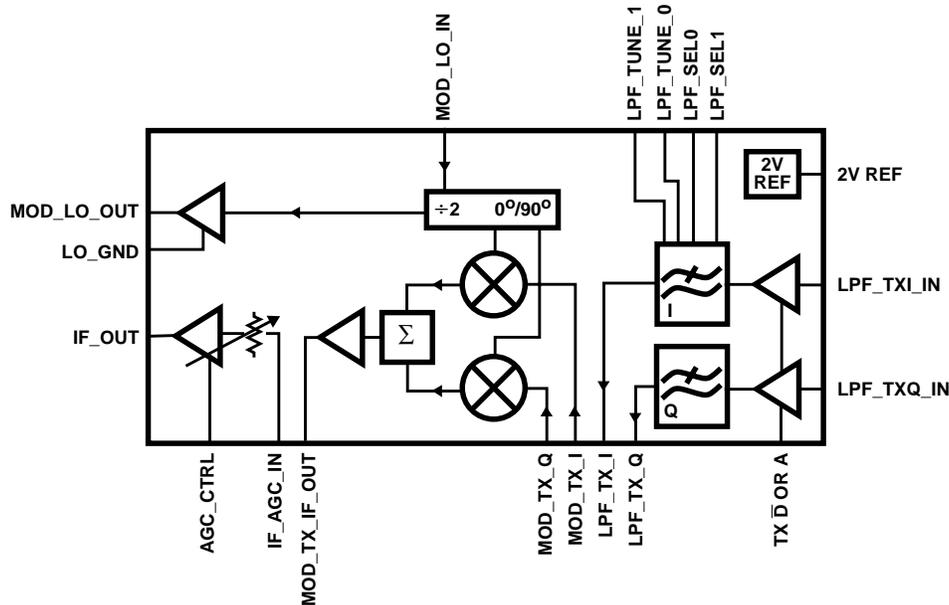

**Features**

- Integrates all IF Transmit Functions
- Broad Frequency Range . . . . . 10MHz to 400MHz
- I/Q Amplitude and Phase Balance . . . . . 0.2dB, 2°
- 5th Order Programmable Low Pass Filter. . . . . 2.2MHz - 17.6MHz
- 400MHz Output AGC Amplifier/Attenuator . . . . . .45dB
- Selectable Digital or Analog TX Baseband Inputs
- Low LO Drive Level . . . . . -15dBm
- Fast Transmit-on Switching . . . . . 1µs
- Power Management/Standby Mode
- Single Supply 2.7V to 5.5V Operation

**Applications**

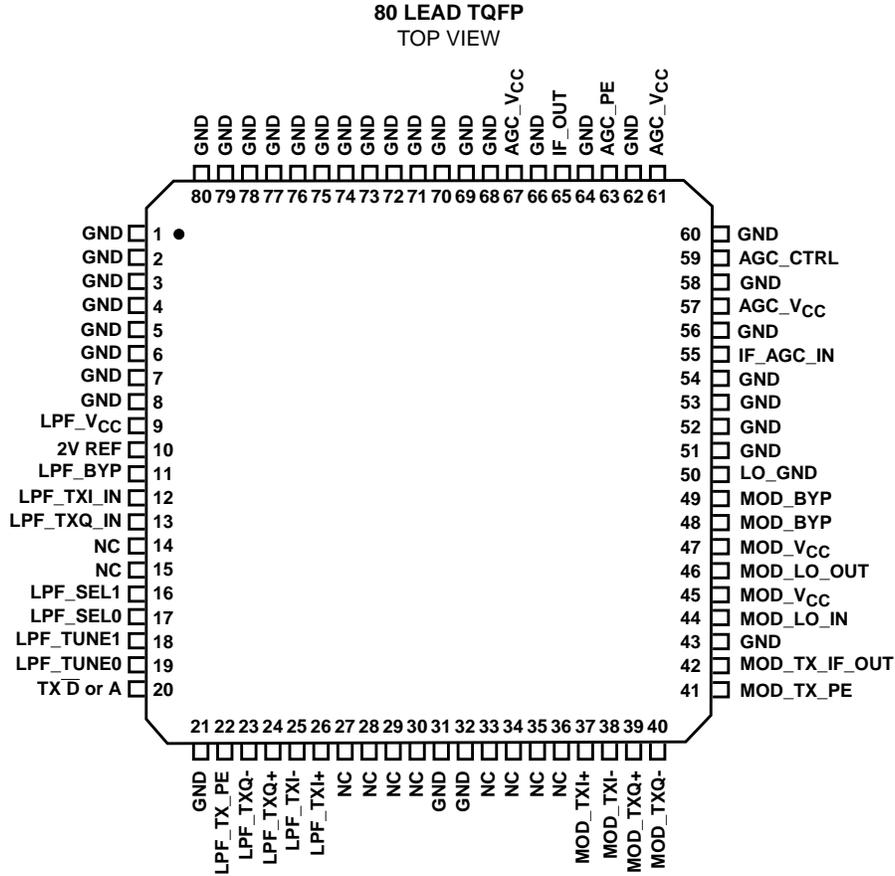

- Wireless Local Loop Systems
- Wireless Local Area Networks
- PCMCIA Wireless Duplex Transceivers
- ISM Systems
- TDMA Packet Protocol Radios
- PCS/Wireless PBX

## Pinout

## Typical Application Diagram

Block Diagram

NOTE: V<sub>CC</sub>, GND and Bypass capacitors not shown.

**Pin Descriptions**

PIN	SYMBOL	DESCRIPTION																		
9	LPF_VCC	Supply pin for the Low pass filter. Use high quality decoupling capacitors right at the pin.																		
10	2V REF	Stable 2V reference voltage output for external applications. Loading must be higher than 10kΩ. A bypass capacitor of at least 0.1μF is required.																		
11	LPF_BYP	Internal reference bypass pin. This is the common voltage (V <sub>CM</sub> ) used for the LPF digital thresholds. Requires 0.1μF decoupling capacitor.																		
12	LPF_TXI_In	Low pass filter in phase (I) channel transmit input. Conventional or attenuated direct coupling is required for digital inputs. AC couple for analog input.																		
13	LPF_TXQ_In	Low pass filter quadrature (Q) channel transmit input. Conventional or attenuated direct coupling is required for digital inputs. AC couple for analog input.																		
14	NC	Connected internally for test purpose. Leave this pin floating.																		
15	NC	Connected internally for test purpose. Leave this pin floating.																		
16	LPF_Sel1	Digital control input pins. Selects four programmed cut off frequencies for the transmit channel. Tuning speed from one cutoff to another is less than 1μs.																		
17	LPF_Sel0																			
		<table border="1"> <thead> <tr> <th>SEL1</th> <th>SEL0</th> <th>CUTOFF FREQUENCY</th> <th>SEL1</th> <th>SEL0</th> <th>CUTOFF FREQUENCY</th> </tr> </thead> <tbody> <tr> <td>LO</td> <td>LO</td> <td>2.2MHz</td> <td>HI</td> <td>LO</td> <td>8.8MHz</td> </tr> <tr> <td>LO</td> <td>HI</td> <td>4.4MHz</td> <td>HI</td> <td>HI</td> <td>17.6MHz</td> </tr> </tbody> </table>	SEL1	SEL0	CUTOFF FREQUENCY	SEL1	SEL0	CUTOFF FREQUENCY	LO	LO	2.2MHz	HI	LO	8.8MHz	LO	HI	4.4MHz	HI	HI	17.6MHz
SEL1	SEL0	CUTOFF FREQUENCY	SEL1	SEL0	CUTOFF FREQUENCY															
LO	LO	2.2MHz	HI	LO	8.8MHz															
LO	HI	4.4MHz	HI	HI	17.6MHz															
18	LPF_Tune1	These two pins are used to fine tune the Low pass filter cutoff frequency. A resistor connected between the two pins (R <sub>TUNE</sub> ) will fine tune the transmit filters. Refer to the tuning equation in the LPF AC specifications.																		
19	LPF_Tune0																			
20	TX $\bar{D}$ or A	Selects the configuration of the Transmit baseband input for either Digital or Analog (500mV <sub>p-p</sub> max). Tie to a High for Analog and Ground for Digital inputs. Requires decoupling capacitor for analog and a simple direct coupled attenuator for digital inputs.																		
22	LPF_TX_PE	Digital input control pin to enable the LPF transmit mode of operation. Enable logic level is High.																		
23	LPF_TXQ-	Negative output of the transmit Low pass filter, quadrature channel. AC coupling is required. Normally connects to the inverting input of the quadrature Modulator (Mod_TXQ-), pin 40.																		
24	LPF_TXQ+	Positive output of the transmit Low pass filter, quadrature channel. AC coupling is required. Normally connects to the non inverting input of the quadrature Modulator (Mod_TXQ+), pin 39.																		
25	LPF_TXI-	Negative output of the transmit Low pass filter, in phase channel. AC coupling is required. Normally connects to the inverting input of the in phase Modulator (Mod_TXI-), pin 38.																		
26	LPF_TXI+	Positive output of the transmit Low pass filter, in phase channel. AC coupling is required. Normally connects to the non inverting input of the in phase Modulator (Mod_TXI+), pin 37.																		
27	NC	Connected internally for test purpose. Leave this pin floating.																		
28	NC	Connected internally for test purpose. Leave this pin floating.																		
29	NC	Connected internally for test purpose. Leave this pin floating.																		
30	NC	Connected internally for test purpose. Leave this pin floating.																		
33	NC	Connected internally for test purpose. Leave this pin floating.																		
34	NC	Connected internally for test purpose. Leave this pin floating.																		
35	NC	Connected internally for test purpose. Leave this pin floating.																		
36	NC	Connected internally for test purpose. Leave this pin floating.																		
37	Mod_TXI+	In phase modulator non inverting input. AC coupling is required. This input is normally coupled to the Low pass filter positive output (LPF_TXI+), pin 26.																		
38	Mod_TXI-	In phase modulator inverting input. AC coupling is required. This input is normally coupled to the Low pass filter negative output (LPF_TXI-), pin 25.																		
39	Mod_TXQ+	Quadrature modulator non inverting input. AC coupling is required. This input is normally coupled to the Low pass filter positive output (LPF_TXQ+), pin 24.																		
40	Mod_TXQ-	Quadrature modulator inverting input. AC coupling is required. This input is normally coupled to the Low pass filter negative output (LPF_TXQ-), pin 23.																		

**Pin Descriptions** (Continued)

PIN	SYMBOL	DESCRIPTION
41	Mod_TX_PE	Digital input control to enable the Modulator section. Enable logic level is High for transmit.
42	Mod_TX_IF_Out	Modulator open collector output, single ended. Termination resistor to V <sub>CC</sub> with a typical value of 250Ω.
44	Mod_LO_In (2XLO)	Single ended local oscillator current input. Frequency of input signal must be twice the required modulator carrier LO frequency. Input current is optimum at 200μA <sub>RMS</sub> . Input matching networks and filters can be designed for a wide range of power and impedances at this port. Typical input impedance is 130Ω. This pin requires AC coupling. NOTE: High second harmonic content input waveforms may degrade I/Q phase accuracy.
45	Mod_V <sub>CC</sub>	Modulator supply pin. Use high quality decoupling capacitors right at the pin.
46	Mod_LO_Out	Divide by 2 buffered output reference from "Mod_LO_in" input. Used for external applications where the modulating and demodulating carrier reference frequency is required. 50Ω single end driving capability. AC coupling is required. This output can be disabled by shorting to V <sub>CC</sub> or floating pin 50.
47	Mod_V <sub>CC</sub>	Modulator supply pin. Use high quality decoupling capacitors right at the pin.
48	MOD_BYP	This pin must be connected to pin 49 and decoupled to gnd. (Note 1)
49	MOD_BYP	This pin must be connected to pin 48. (Note 1)
50	LO_GND	When grounded, this pin enables the LO buffer (Mod_LO_Out). When open (NC) it disables the LO buffer.
55	IF_AGC_IN	AC coupled input to the AGC amplifier.
57	AGC_V <sub>CC</sub>	AGC supply pin supply pin. Use high quality decoupling capacitors right at the pin.
59	AGC_CTRL	AGC control DC control voltage input requires external resistor to set scale factor. 10K for optimum temp. co. May require decoupling filtering capacitor.
61	AGC_V <sub>CC</sub>	AGC supply pin supply pin. Use high quality decoupling capacitors right at the pin.
63	AGC_PE	Digital input control for the AGC amplifier. Enable logic level is High.
65	AGC_IF_OUT	AGC amplifier output. Output impedance of 250Ω. Need to be connected to V <sub>CC</sub> by an inductor with reactance well above 250Ω.
67	AGC_V <sub>CC</sub>	AGC supply pin supply pin. Use high quality decoupling capacitors right at the pin.
See Pinout	GND	All remaining pins not listed above must be connected to a solid ground plane.

NOTE:

1. If pin 50 is grounded, otherwise float.

# HFA3763

## Absolute Maximum Ratings $T_A = 25^{\circ}\text{C}$

Supply Voltage . . . . . -0.3V to +6.0V  
 Voltage on Any Other Pin . . . . . -0.3V to  $V_{CC} + 0.3\text{V}$

## Operating Conditions

Supply Voltage Range . . . . . +2.7V to +5.5V  
 Operating Temperature Range . . . . .  $-40^{\circ}\text{C} \leq T_A \leq 85^{\circ}\text{C}$

## Thermal Information

Thermal Resistance (Typical, Note 1)  $\theta_{JA}$  ( $^{\circ}\text{C}/\text{W}$ )  
 TQFP Package . . . . . 75  
 Package Power Dissipation at  $70^{\circ}\text{C}$   
 Plastic TQFP Package . . . . . 1.1W  
 Maximum Junction Temperature (Plastic Package) . . . . .  $150^{\circ}\text{C}$   
 Maximum Storage Temperature Range . . . . .  $-65 \leq T_A \leq 150$   
 Maximum Lead Temperature (Soldering 10s) . . . . .  $300^{\circ}\text{C}$   
 (TQFP - Lead Tips Only)

*CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.*

### NOTE:

1.  $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

## Cascaded DC Electrical Specifications $V_{CC} = 4.5\text{V}$ to $5.5\text{V}$ , Unless Otherwise Specified

NOTES:

1. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
2. All dimensions and tolerances per ANSI Y14.5M-1982.
3. Dimensions D and E to be determined at seating plane -C-.
4. Dimensions D1 and E1 to be determined at datum plane -H-.
5. Dimensions D1 and E1 do not include mold protrusion. Allowable protrusion is 0.25mm (0.010 inch) per side.
6. Dimension b does not include dambar protrusion. Allowable dambar protrusion shall not cause the lead width to exceed the maximum b dimension by more than 0.08mm (0.003 inch).
7. "N" is the number of terminal positions.
