## 16-Bit Grid Driver with 4 to 16-Decoder

---

### GENERAL DESCRIPTION

The MSC7166 is a driver IC designed to directly drive the grids of a vacuum fluorescent display tube.

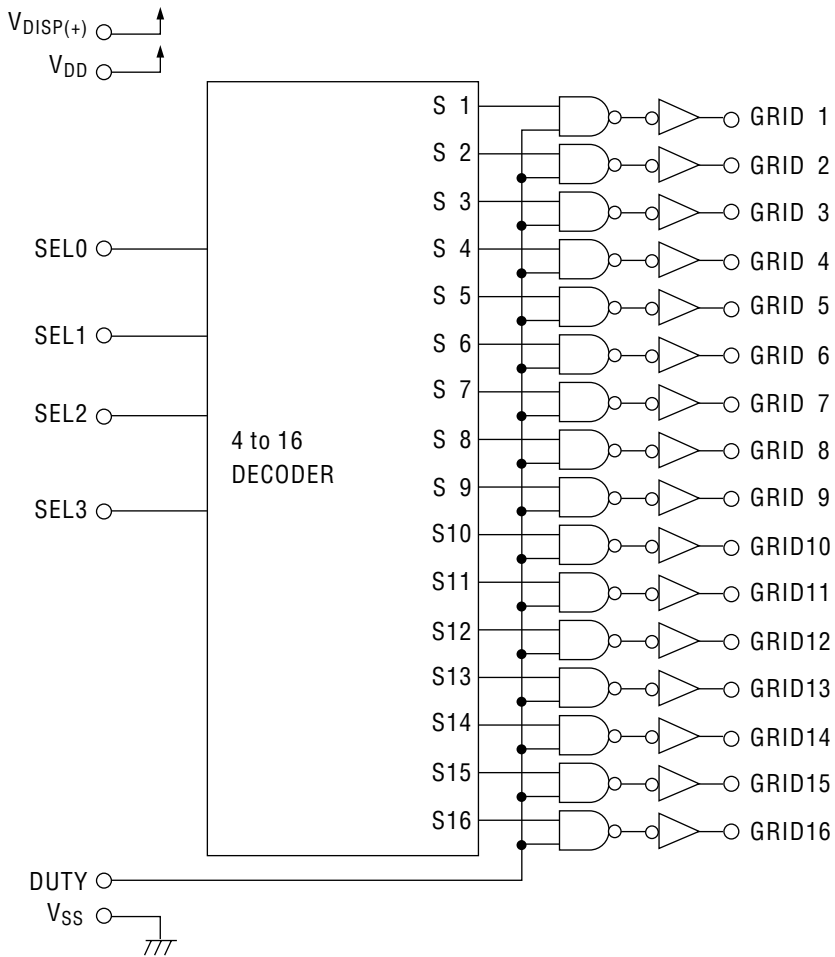

Since this IC has a built-in 4 to 16-line decoder and 16 output circuits, a signal device of MSC7166 can replace a set of the following three: two devices of either MSL912 or MSL918 and one device of either MSM4514 or MSM74HC4514.

Setting the DUTY pin to the "L" level makes all driver outputs go "L". Blanking can be set using this function.

### FEATURES

- Logic supply voltage : 5V
- Driver supply voltage : 65V
- Driver output current  $I_{OH}$  : -40 mA  
 $I_{OL}$  : 1 mA
- Can be directly connected to VF display tube without pull-down resistor
- Built-in 4- to 16-line decoder
- Brightness can be adjusted by DUTY pin
- Package  
24-pin plastic SOP (SOP24-P-430-1.27-K) (Product name: MSC7166GS-K)

**PIN DESCRIPTIONS**

Symbol	Type	Description
SELO-3	I	4- to 16-line decoder input pins. The input 4-bit binary signals are converted into hexadecimal signals, then output through driver output pins.
DUTY	I	Duty control signal input pin. Setting this pin to "L" makes all driver outputs go "L", so this pin can be used for brightness control.
GRID1-16	O	High withstand voltage driver output pins for driving fluorescent display tube. These pins can directly be connected to the grid of fluorescent display tube without pull-down resistor.
V <sub>DISP(+)</sub>	—	Power supply pin for the fluorescent display tube driver circuit.
V <sub>DD</sub>	—	Logic power supply pin.
V <sub>SS</sub>	—	Ground pin.

\*1 The maximum supply voltage for V<sub>SS</sub>.

\*2 Permanent damage to the device may be caused if the voltage is supplied over the the absolute maximum rating value.

\*3 Thermal resistance of the package (between junction and atmosphere).

The junction temperature (T<sub>j</sub>) given by the equation indicated below should not exceed 150°C.

$$T_j = P \times R_{j-a} + T_a \quad (P: \text{maximum power consumption of IC})$$

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.

Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
