

CA139, CA139A, CA239, CA239A CA339, CA339A, LM339*, LM339A*

Quad Voltage Comparators

For Industrial, Commercial, and Military Applications

Features:

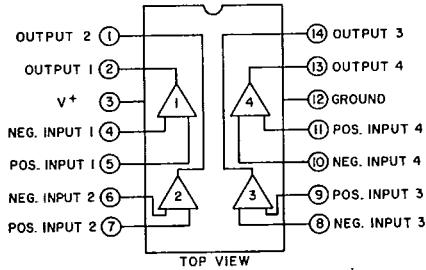

- Operation from single or dual supplies
- Common-mode input-voltage range to ground
- Output voltage compatible with TTL, DTL, ECL, MOS and CMOS
- Differential input-voltage range equal to the supply voltage
- Maximum input-offset voltage (V_{IO}):
CA139A, CA239A, CA339A - 2 mV
CA139, CA239, CA339 - 5 mV
- Replacement for industry types 139, 239, 339, 139A, 239A, and 339A

The RCA-CA139, CA239, CA339, CA139A, CA239A, and CA339A types consist of four independent single- or dual-supply voltage comparators on a single monolithic substrate. The common-mode input voltage range includes ground even when operated from a single supply, and the low power supply current drain makes these comparators suitable for battery operation. These types were designed to directly interface with TTL and CMOS.

Types CA139A, CA239A, and CA339A have all the features and characteristics of their prototype counter parts CA139, CA239, and CA339 plus an even lower input-offset-voltage characteristic. These devices are supplied in a 14-lead dual-in-line plastic package (E suffix) and in a 14-lead dual-in-line hermetic (frit-seal) ceramic package (F suffix). The CA339 is also available in chip form (H suffix).

Applications:

- Square-wave generators
- Time-delay generators
- Pulse generators
- Multivibrators
- High-voltage digital logic gates
- A/D converters
- MOS clock timers
