

## DESCRIPTION

The ES6168A Vibratto™S DVD processor is a super high-performance single-chip MPEG video decoding solution that provides not only DVD decoding, but also MPEG-4 support, allowing users to view video clips (from the Internet, a camcorder, or other source) on DVD players.

The ES6168A integrates a state-of-the-art progressive-scan video feature to provide brilliant and sharp, flicker-free output to the video display, built-in CPRM, and S/PDIF input and output support. The ES6168A performs audio/video stream data processing, TV encoding, Macrovision™ copy protection, DVD system navigation, system control, and housekeeping functions.

The Vibratto-S DVD processor is built on the ESS proprietary dual CPU Programmable Multimedia Processor (PMP) core consisting of 32-bit RISC and 64-bit DSP processors and offers the best DVD feature set. The processing units enable simultaneous parallel execution of system commands and data processing to perform specialized encoding and decoding tasks.

The RISC processor performs bit stream parsing, control audio data output, transfer video and audio data to the vector engine and service system control and housekeeping functions. The vector engine performs audio and video micro-code processing required by A/V standards, such as Dolby® Digital, MPEG and JPEG imaging. These processing tasks include video motion compensation and estimation, loop filtering, Discrete Cosine Transforms (DCT), inverse DCT, quantization, and inverse quantization.

The Vibratto-S DVD processor supports both parallel and serial DVD loader interfaces, industry standard I<sup>2</sup>S audio data input and output, EPROM and DRAM access, and audio/video data buffering. It also supports both letterbox and pan-and-scan displays, sub-picture overlay, and On-Screen Display (OSD). In addition, the Vibratto-S DVD solution plays Karaoke, CD+G, DVD-Audio, HDCD, CD-DA, MP3, and WMA.

The ES6168A DVD processor is available in a 208-pin Plastic Quad Flat Pack (PQFP) device package.
