

# CCD multichannel detector head C7020, C7021, C7025

Designed for front-illuminated CCD area image sensors

C7020, C7021 and C7025 are high sensitivity multichannel detector heads for use with front-illuminated FFT-CCD area image sensors. C7020 is designed for the non-cooled front-illuminated CCD image sensors (S7010 series), while C7021 and C7025 for the TE-cooled CCD image sensors (S7011/S7015 series) for detection at even lower light levels. C7020, C7021 and C7025 incorporate a low-noise driver/amplifier circuit that provide reliable operation from simple external signals. C7021 and C7025 also include a highly stable temperature controller that cools the sensor to a preset temperature level ( $T_s = -10^\circ\text{C}$ ) as soon as the power is turned on. If the cooler fails and causes internal circuitry to overheat, the built-in protection circuit automatically turns off the power to the thermoelectric cooler. Despite its compact size, the housing configuration is designed for good heat dissipation, and threaded mounting holes on the front panel allow connections to other devices such as monochrometers.

The table below shows front-illuminated CCD image sensors for C7020, C7021 and C7025. C7020, C7021 and C7025 do not come with a CCD image sensor, so select the desired sensor and order it separately.

Multichannel detector head controller C7310-02 is also available.

## Features

- Designed for front-illuminated CCD area image sensor \*<sup>1</sup>  
C7020: for non-cooled type  
C7021, C7025: for TE-cooled types
- Binning operation \*<sup>2</sup>
- Driver/amplifier circuit for low noise CCD operation
- Highly stable temperature controller (C7021, C7025)  
Cooling temperature: fixed at  $-10 \pm 0.05^\circ\text{C}$   
(Ta=10 to 35 °C)
- Simple signal input operation
- Compact configuration

## Applications

- Fluorescence spectroscopy
- Raman spectroscopy
- Other low light level detection

## ■ Selection guide

The table below shows CCD area image sensors applicable for C7020, C7021, C7025.

Since C7020, C7021, C7025 do not include a CCD area image sensor, so select the desired sensor and order it separately.

Type No.	CCD area image sensor			
	Type No.	Number of pixels	Number of active pixels	Active area [mm (H) × mm (V)]
C7020	S7010-0906	532 × 64	512 × 60	12.288 × 1.440
	S7010-0907	532 × 128	512 × 124	12.288 × 2.976
	S7010-0908	532 × 256	512 × 252	12.288 × 6.048
	S7010-1006	1044 × 64	1024 × 60	24.576 × 1.440
	S7010-1007	1044 × 128	1024 × 124	24.576 × 2.976
	S7010-1008	1044 × 256	1024 × 252	24.576 × 6.048
C7021	S7011-0906	532 × 64	512 × 60	12.288 × 1.440
	S7011-0907	532 × 128	512 × 124	12.288 × 2.976
	S7011-1006	1044 × 64	1024 × 60	24.576 × 1.440
	S7011-1007	1044 × 128	1024 × 124	24.576 × 2.976
C7025	S7015-0908	532 × 256	512 × 252	12.288 × 6.048
	S7015-1008	1044 × 256	1024 × 252	24.576 × 6.048

\*<sup>1</sup>: The FFT-CCD (full frame transfer CCD) has charge transfer sections that are also used as light receiving areas, being different from interline transfer CCD (IT-CCD) commonly used in video cameras. Compared to the IT-CCD, the FFT-CCD offers advantages of low dark current, a 100 % open area ratio and low image lag.

\*<sup>2</sup>: The FFT-CCD was originally designed as a two-dimensional image sensor. However, it can be operated like a linear image sensor having a large active area by transferring all the pixel signals in the vertical direction to the horizontal register (this is referred to as line binning).

## ■ Specifications for temperature controller (C7021, C7025)

(Ta=25 °C, VD1=+5 V, VA1+=+15 V, VA1=- -15 V, VA2=+24 V, VD2=+5 V, Vp=+5 V, VF=+12 V)

Parameter <sup>*7</sup>	Symbol	Min.	Typ.	Max.	Unit
Cooling temperature	T <sub>s</sub>	-11	-10	-9	°C
Temperature control range	ΔT <sub>s</sub>	-0.05	-	+0.05	°C
Power dissipation of TE-cooler element	P <sub>p</sub>	-	-	7	W
Cool down time to reset temperature	t <sub>o</sub>	-	-	5	min.
Setting temperature for overheat protection	T <sub>o</sub>	-	+45	-	°C

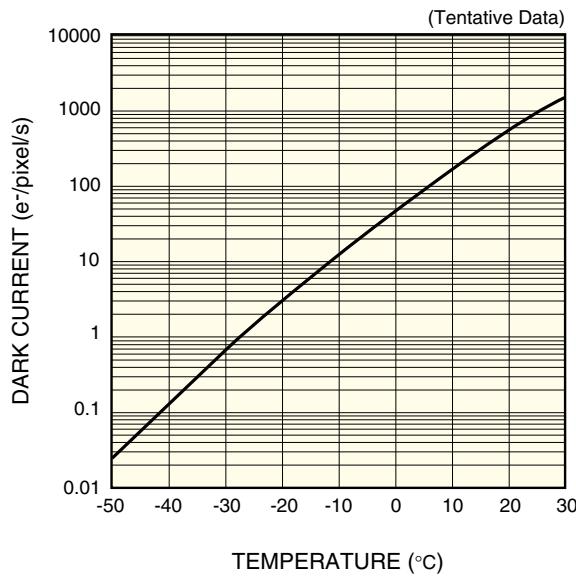

\*7: Other functions include error display, automatic power off, and detection of electrical opens and shorts by the thermosensor.

## ■ Pin assignment of "SIGNAL I/O" connector

15-pin D-sub connector

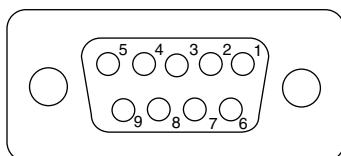

KACCC0069EA

Pin No.	Terminal name	Description
1	Mode select	Digital input signal used to select between the line binning operation and area scanning operation. HCMOS compatible. High level or left open: line binning operation Low level: area scanning operation
2	Data video	Analog video output. Positive polarity
3	VA1+ (+15 V)	Analog power supply
4	VA1- (-15 V)	Analog power supply
5	VD1 (+5 V)	Digital power supply
6	Start	Digital input signal for initializing the circuit. HCMOS compatible. Positive logic. The interval of the start pulses determines the integration time of the CCD image sensor.
7	CLK	Digital input signal for operating the circuit. HCMOS compatible. Rising edge operation.
8	EOS	Digital input signal for indicating end-of-scan of the image sensor. HCMOS compatible. Negative logic.
9	A. GND	Analog ground
10	A. GND	Analog ground
11	VA2 (+24 V)	Analog power supply
12	D. GND	Digital ground
13	D. GND	Digital ground
14	D. GND	Digital ground
15	Trigger	Digital output signal for A/D conversion. HCMOS compatible. Positive logic.

## ■ Pin assignment of "TE CONTROL I/O" connector (C7021, C7025)

9-pin D-sub connector

KACCC0075EA

Pin No.	Terminal name	Description
1	VD2 (+5 V)	Digital power supply
2	Temp monitor	Analog output signal of the temperature of the CCD image sensor
3	Cooling control	Digital input signal for starting to cool down. HCMOS compatible. High level or left open: cooling Low level: stand-by
4	Vp (+5 V)	Power supply for the thermoelectric cooler in the CCD image sensor. (Please use AWG 18 wire)
5	VF (+12 V)	Power supply for cooling fan
6	D. GND	Ground
7	D. GND	Ground
8	P. GND	Power supply return of the thermoelectric cooler mounted in the CCD image sensor. (Please use AWG 18 wire)
9	F. GND	Power supply return for cooling fan

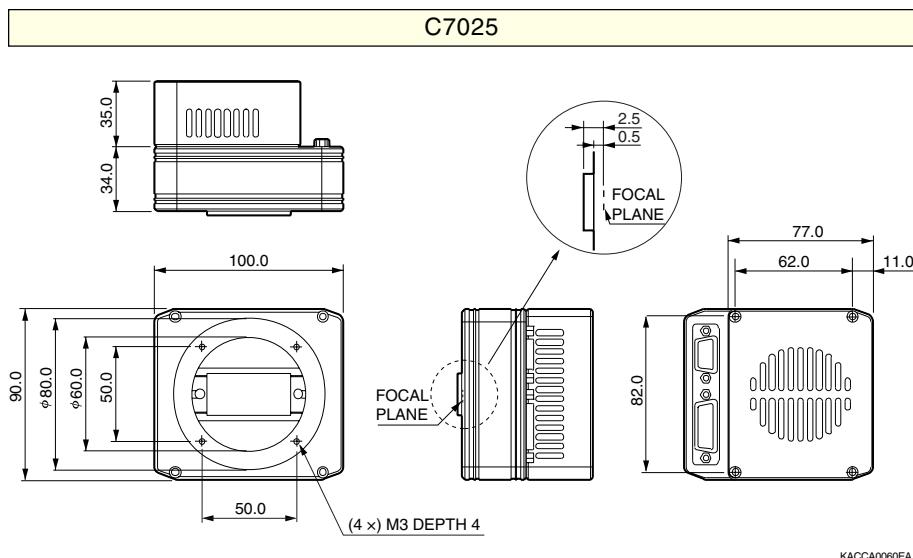

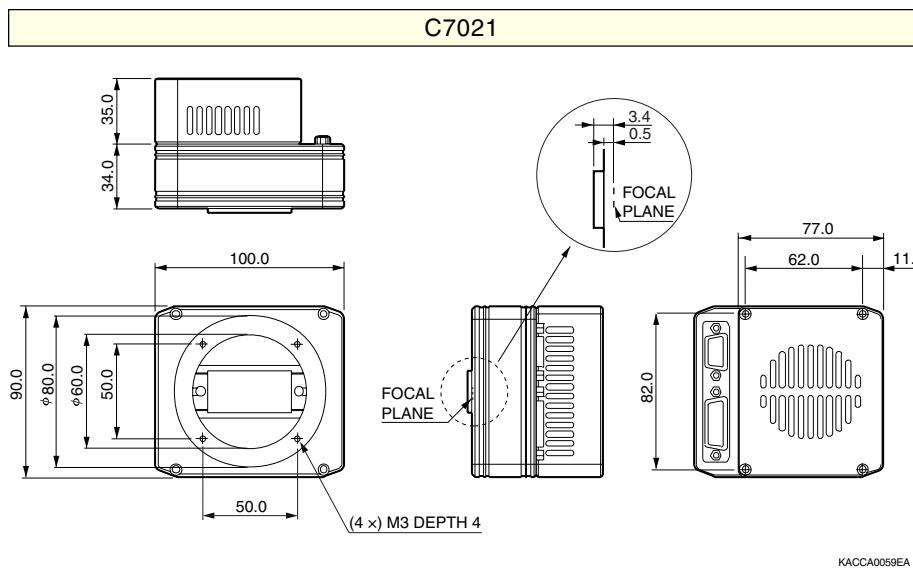

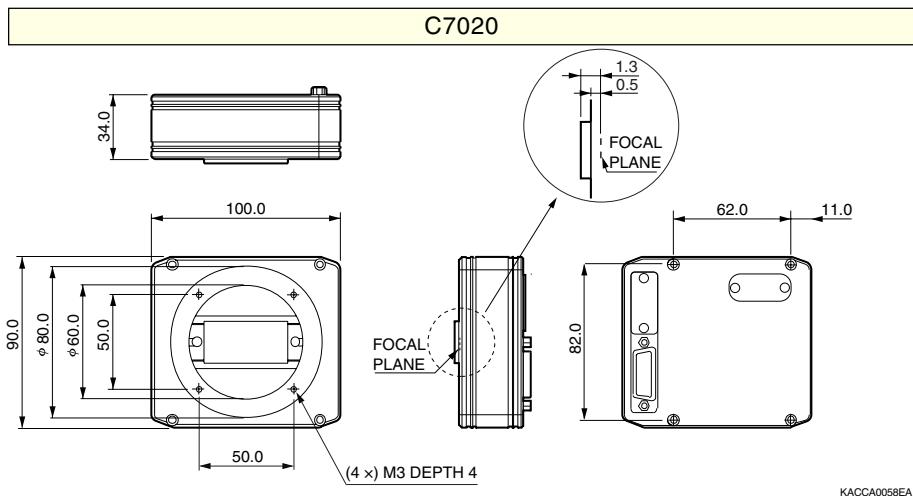

Available for using same power supply (+5 V) for "+VD2" and "+Vp".

Caution: Do not connect "VD2" and "Vp" together on the backside of the 9-pin D-sub connector.

These may be connected (shorted) at the power supply end, not 9-pin D-sub connector.
