**ID LOGIC® Interface with PLL**

## Overview

The LC7041 is the central IC to the ID LOGIC Module and Electronic Tuning Radio.

It performs the interface between the receiver's main microprocessor and ID LOGIC's 256 kB database ROM and its 2 kB update RAM. The LC7041 also contains the Phase-Locked Loop (PLL) circuitry responsible for electronic tuning and it offers several I/O ports.

The LC7041 permits the easy integration of the ID LOGIC Module in a receiver. It contains all the appropriate software to send and receive serial instructions and data to and from the receiver's main microprocessor. An instruction is given simply by having the main microprocessor send a one byte-long function code followed, when necessary, by the appropriate data. Upon execution, the LC7041 returns its response data, if any, to the microprocessor for display or other processing. Further the SUPER DX search control function is added to the LC7041.

### Note

It is necessary to enter into an "ID LOGIC Licensing Contract" with PRS. Corp. before sample devices can be shipped.

## Functions

### (1) ID LOGIC Status read

- Read current (receiver) location
- Read cbroadcast station location

### (2) State/province set

- Set/read state up
- Set/read state down

### (3) City set (in current state)

- Set/read city up
- Set/read city down

### (4) Travel

- 1 grid move north
- 1 grid move east
- 1 grid move south
- 1 grid move west
- Set preset location (1 of 8)
- Return to preset location (1 of 8)
- Display main (largest) city in grid

### (5) DX status and search control

- Set LCL ON (Local = 1 grid search)
- Set DX ON (DX = 9 grid search)
- Set SUPER DX ON (25 grid search)

### (6) Format scanning

- Format search up (1 of 7 general format keys) in selected LCL/DX
- Search up another format
- Write to RAM last station format
- Read from RAM last station format

### (7) User formats

- Read user format in key (1 of 8 user keys)
- User format search up (1 of 8 user keys)
- Search up another user format
- Search down another user format
- Display user format up (1 of 32 formats)
- Display user format down
- Set user format (1 of 32 formats in 1 of 8 user keys)
- Write to RAM last station user format
- Read from RAM last station user format

### (8) Prior multi-station

- Set prior multi-station
- Reset prior multi-station

### (9) Updates (tuning changes)

- Update mode ON
- Update mode cancel
- Update mode OFF (completed)
- Change frequency
- Change call sign
- Change format up/down
- Enter new station
- Reset 1 updated station (cancel update)
- Reset all update stations memories (cancel all updates)

### (10) Tuning (seek or manual)

- Tune 1 channel up
- Tune 1 channel down
- Read status upon tuning change (Can be canceled midway by applying a LOW pulse signal (10µs or longer) to the INT pin)
- IF count start
- Multi-station check
- Read station status

**SANYO Electric Co.,Ltd. Semiconductor Business Headquarters**

TOKYO OFFICE Tokyo Bldg., 1-10, 1 Chome, Ueno, Taito-ku, TOKYO, 110 JAPAN

## (11) Band change

- Switch to AM
- Switch to FM

## (12) I/O port and RAM

- OUT1 to OUT5 High/Low control
- IN1 to IN5 input/read
- Read ADC data
- Read INFF data

## (13) Preset memory

- Write to preset memory with ID LOGIC mode ON
- Read from preset memory with ID LOGIC mode ON

## (14) Initialization

- Set initial data :
  - IF or IF counter
  - FM channel separation
  - FM low frequency
  - FM channel number
- Read hot/cold status
- Load frequency
- Load AM and FM frequencies
- Set initial location (grid + largest city in grid)

## (15) Other

- ROM data (version) read

Addtion item from LC7040N

- Super DX ON
- Next user format search down

Elimination item from LC7040N

- ID LOGIC ON/OFF
- Preset memory with ID LOGIC mode OFF
- ROM data
- Initiate user set format

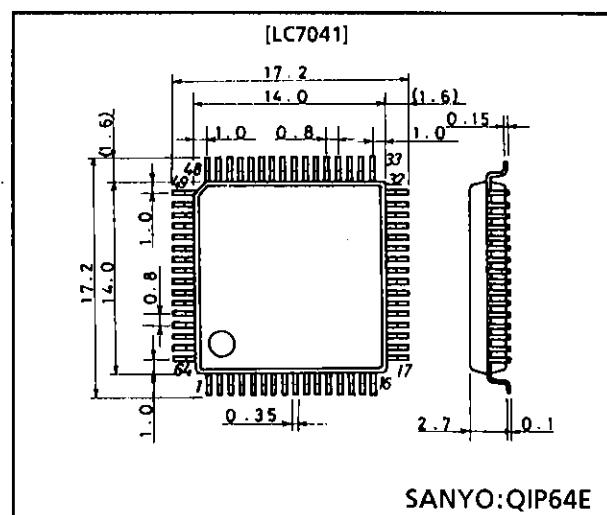

Alteration item from LC7040N

- Read user format (Unentry is represented by "F-No. — "FF" ",with format No. being "don't care".)
- Set user format (A format entered can be cleared by setting "FF" to F-No.)
- The search method has been changed as follows : The earlier method that 1 of 32 formats is entered for searching has been changed to a new method that 10 of 32 formats are selected and if at least 1 of these 10 formats matches a broadcast station is assumed to exist.

## Package Dimensions

unit:mm

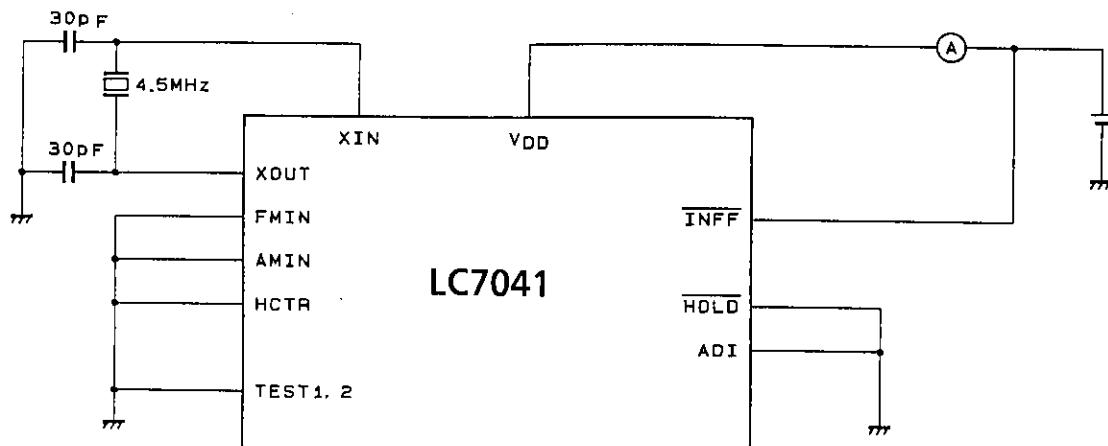

3159-QIP64E

SANYO:QIP64E

## Test Circuit

### Backup Mode

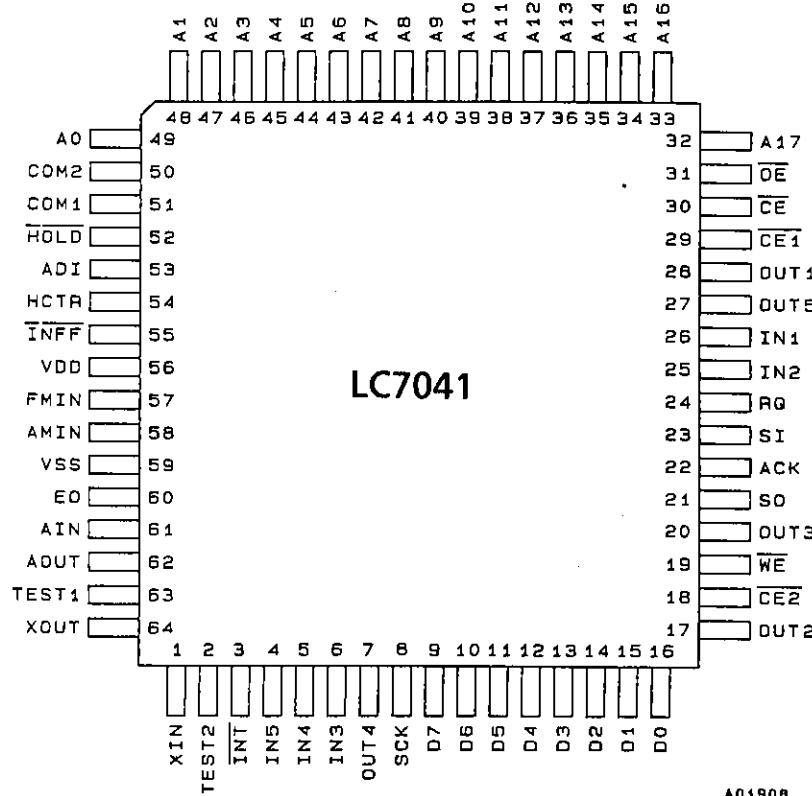

**Figure 1**

Note

Pins IN1 to IN5, OUT1 to OUT5, D0 to D7, RQ, SI, SO, SCK, ACK and WE are all left open.

### Pin assignment

## Pin functions

Number	Name	I/O	Equivalent circuit	Description
26	IN1	I	<p>A01910</p>	Low-threshold input ports. Built-in 100 kΩ (typ) pull-down resistance. Input is prohibited when HOLD is LOW.
25	IN2			Main microcontroller serial communications request signal
24	RQ			Main microcontroller serial communications data input signal
23	SI	O	<p>A01888</p>	Main microcontroller serial communications acknowledge signal
22	ACK			Main microcontroller serial communications data output signal
21	SO			General-purpose output port
20	OUT3			RAM write enable signal
19	WE			RAM control signal
18	CE2			General-purpose output port
17	OUT2	I	<p>A01911</p>	ROM and RAM data input pins. Input is prohibited when HOLD is LOW.
16 to 9	D0 to D7			
6 to 4	IN3 to IN5	I		General-purpose input ports. Input is prohibited when HOLD is LOW.
3	INT	I	<p>A01891</p>	Processor interrupt input. Valid for LOW-level pulses of 10 µs or longer. Interrupts are prohibited during backup mode.
8	SCK	O	<p>A01892</p>	Main microcontroller serial communications clock signal. N-channel open-drain, high-voltage port for use with a pull-up resistor. High impedance when HOLD goes LOW.
7	OUT4			General-purpose output port. N-channel open-drain, high-voltage port for use with a pull-up resistor. High impedance when HOLD goes LOW.
32 to 49	A17 to A0	O	<p>A01912</p>	ROM and RAM address signal
27	OUT5			General-purpose output ports
28	OUT1			Input is prohibited when HOLD is LOW.
29	CE1			
30	CE			ROM and RAM control signals
31	OE	O		Leave open for normal use.
51	COM1			
50	COM2			
57	FMIN	I	<p>A01913</p>	FM VCO input. Capacitively couple for normal use.
58	AMIN			AM VCO input. Capacitively couple for normal use.

# LC7041

Number	Name	I/O	Equivalent circuit	Description
54	HCTR	I	 A01914	IF counter input. Capacitively couple for normal use. 0.4 to 12 MHz input frequency.
53	ADI	I	 A01915	A/D converter input 6-bit sequential approximation type with full scale (3FH data) of $(63/96) \times V_{DD}$ .
61	AIN	I	 A01916	LPF amplifier transistor connections.
62	AOUT	O		
60	EO	O	 A01917	Standard frequency, programmable divider output, phase comparison error output. With built-in charge pump.
55	TINFF	I	 A01901	Serial communications speed select. High-speed mode when HIGH, and low-speed mode when LOW.
52	HOLD	I	 A01901	Backup-mode select. Backup mode is selected when LOW. High withstand voltage when synchronized to the main power switch.
1	XIN	I	 A01902	4.5 MHz crystal oscillator connections. With built-in feedback resistor.
64	XOUT	O		
63	TEST1			Test pins. Leave open or tie to VSS for normal use.
2	TEST2			
56	VDD			Supply pins
59	VSS			

## Block Diagram

### Note

HOLD can be placed under microprocessor control to implement time control, immediately after device wake-up, and stable reception.

**Specifications****Absolute Maximum Ratings**

Parameter	Symbol	Rating s	Unit
Supply voltage	V <sub>DD</sub> max	-0.3 to +6.5	V
IN3 to IN5, HOLD, ADI, INT and INFF input voltage	V <sub>IN1</sub>	-0.3 to +13	V
Input voltage for all other inputs	V <sub>IN2</sub>	-0.3 to V <sub>DD</sub> + 0.3	V
OUT4, SCK and AOUT output voltage	V <sub>OUT1</sub>	-0.3 to +15	V
Output voltage for all other outputs	V <sub>OUT2</sub>	-0.3 to V <sub>DD</sub> + 0.3	V
OUT4 and SCK output current	I <sub>OUT1</sub>	0 to 5	mA
D0 to D7 output current	I <sub>OUT2</sub>	0 to 3	mA
OUT2, OUT3, ACK, SO, WE and CE2 output current	I <sub>OUT3</sub>	0 to 1	mA
AOUT output current	I <sub>OUT4</sub>	0 to 2	mA
Power dissipation (T <sub>opf</sub> = -40 to +85 °C)	P <sub>d</sub> max	400	mW
Operating temperature range	T <sub>opf</sub>	-40 to +85	°C
Storage temperature range	T <sub>stg</sub>	-45 to +125	°C

**Allowable Operating Ranges at Ta = -40 to +85 °C, V<sub>DD</sub> = 4.5 to 5.5 V**

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Supply voltage	V <sub>DD1</sub>	CPU and PLL operating	4.5	-	5.5	V
	V <sub>DD2</sub>	For RAM data backup	1.3	-	5.5	V
IN3 to IN5 HIGH-level input voltage	V <sub>IH1</sub>		0.7V <sub>DD</sub>	-	8.0	V
INFF HIGH-level input voltage	V <sub>IH2</sub>		2.5	-	8.0	V
