IF Amplifier

For Use in Communication Equipment

Features:

- Input resistance - 100 k Ω typ.
- Output resistance - 70 Ω typ.
- Voltage gain - 24 dB typ. @ 1.75 MHz
- Push-pull input, single-ended output
- -3 dB bandwidth - 11 MHz typ.
- AGC range - 80 dB typ.
- Useful frequency range DC to 15 MHz

Applications:

- Product detector
- IF & video amplifier
- AM detector
- Schmitt trigger

The CA3002 integrated-circuit IF amplifier is a balanced differential amplifier that can be used with either a single-ended or a push-pull input and can provide either a direct-coupled or a capacitance-coupled single-ended output. Its applications include RC-coupled IF amplifiers that use the internal silicon output-coupling capacitor, video amplifiers that use an external coupling capacitor, envelope detectors, product detectors, and various trigger circuits.

The CA3002 is supplied in the 10-lead hermetic TO-5 style package.

ABSOLUTE-MAXIMUM VOLTAGE AND CURRENT LIMITS, at $T_A = 25^\circ\text{C}$

Indicated voltage or current limits for each terminal can be applied under the specified operating conditions for other terminals.

All voltages are with respect to ground ($-V_{CC}$, $+V_{EE}$) or common terminal of Positive and Negative DC supplies).

- 1) Increase both input-signal tones until the $2f_2 - f_1$ and $2f_1 - f_2$ output-signal voltages are 30 dB below the f_1 and f_2 output-signal voltages.
- 2) Measure rms values of the input and output signal voltages.
- 3) The measured input signal voltage is that value when the 3rd-harmonic intermodulation products are 30 dB below the fundamental outputs.
