

General Description

The AAT3125 USB On-the-Go (OTG) charge pump is a member of AnalogicTech's Total Power Management IC™ (TPMIC™) product family. The device integrates a high efficiency 1.5X fractional 100mA regulated charge pump for supplying V_{BUS} with the additional functions required for OTG devices (formerly known as dual role devices). Four voltage detectors monitor V_{BUS} , and a current source dedicated for V_{BUS} pulsing is provided for compliance with Session Request Protocol (SRP) as defined by the USB OTG Supplement.

The charge pump section uses a high efficiency fractional topology, with a high frequency 750kHz switching speed which enables the use of small capacitors (less than 3.3 μ F). The AAT3125 features extremely low quiescent current to extend battery run time. Additionally, the device integrates protection features such as under-voltage lockout, and output short circuit and thermal protection.

The AAT3125 is available in a Pb-free, surface mount QFN44-16 package and is rated over the -40°C to +85°C temperature range.

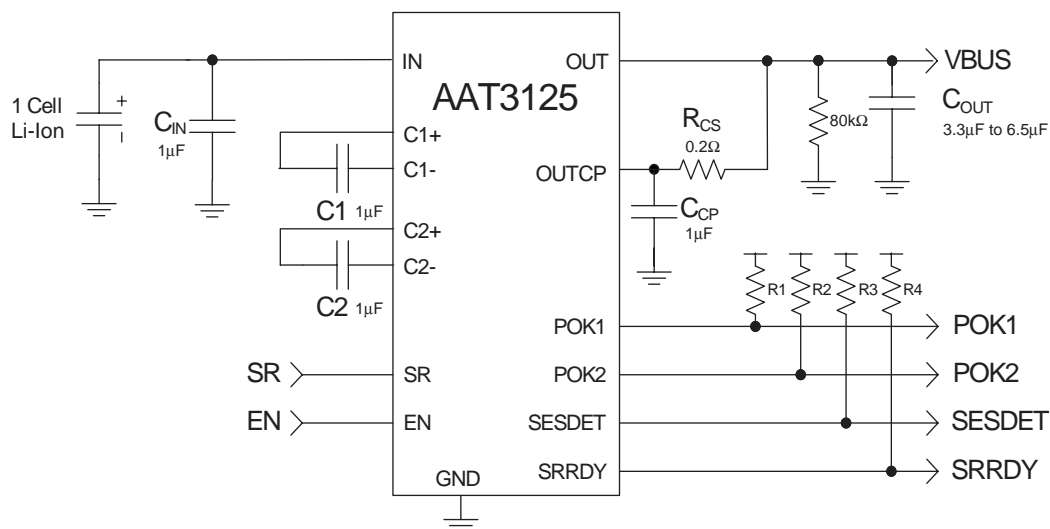

Features

- V_{IN} Range: 2.7V to 5.5V
- Regulated Fractional Charge Pump
- 100mA Output Current
- Reverse Load Protection
- Power Good Flag
- SRP Detection Flag
- SRP Ready Flag
- Output Short-Circuit and Thermal Protection
- Under-Voltage Protection
- Less than 1 μ A Consumed While Disabled
- Designed to Allow Operation with Output Capacitance as Low as 3.3 μ F
- 16-pin QFN44 Package
- -40°C to +85°C Temperature Range

Applications

- Cell Phones
- Hand-Held Computers
- PDAs

Typical Application

Pin Descriptions

Pin #	Symbol	Function
1	POK1	Power OK 1. Open drain output with 4.0V voltage detector. When the OUT pin rises above the detected voltage (4.0V), POK1 will transition from low to high state. Similarly, when the output falls below 4.0V, POK1 will transition from high to low. A 10kΩ pull-up resistor is recommended.
2	POK2	Power OK 2. Open drain output with 4.4V voltage detector. When the OUT pin rises above the detected voltage (4.4V), POK2 will transition from low to high state. Similarly, when the output falls below 4.4V, POK2 will transition from high to low. A 10kΩ pull-up resistor is recommended.
3	SESDET	Session detect. Open drain output with 2.0V voltage detector. When the OUT pin rises above the detected voltage (2.0V), it will transition from low to high state. Similarly, when the output falls below 2.0V, SESDET will transition from high to low. A 10kΩ pull-up resistor is recommended.
4	SRRDY	Session request ready. Open drain output with 0.6V voltage detector. When the OUT pin rises above the detected voltage (0.6V), it will transition from low to high state. Similarly, when the output falls below 0.6V, SRRDY will transition from high to low. A 10kΩ pull-up resistor is recommended.
5	OUT	Power output to VBUS.
6	C1+	Flying capacitor 1 positive terminal.
7	C1-	Flying capacitor 1 negative terminal.
8, 13	N/C	No connect.
9	OUTCP	Charge pump output. Requires 1μF bypass capacitor to ground.
10	C2+	Flying capacitor 2 positive terminal.
11	C2-	Flying capacitor 2 negative terminal.
12	GND	Ground.
14	VIN	Input power supply. Requires 1μF bypass capacitor to ground.
15	SR	Session request input control pin. Should not be left floating. Must connect to high or low. For more details, see Table 1.
16	EN	Enable input control pin. When in the low state, the AAT3125 is powered down and consumes a small amount of power. When connected high, it is in normal operation. This pin should not be left floating. For more details, see Table 1.
EP		Exposed paddle (bottom); connect to GND directly beneath package.

1. Stresses above those listed in Absolute Maximum Ratings may cause permanent damage to the device. Functional operation at conditions other than the operating conditions specified is not implied. Only one Absolute Maximum Rating should be applied at any one time.
2. Based on long-term current density limitation.
3. Human body model is a 100pF capacitor discharged through a 1.5kΩ resistor into each pin.
4. Mounted on an FR4 board.
5. Derate 20mW/°C above 25°C.

Power OK

USB OTG devices connected as Host must maintain V_{OUT} above 4.4 volts or report that it is below 4.4 volts. Two Power OK outputs (POK1 and POK2) provide a window comparison of the V_{OUT} voltage. The POK1 open drain output is pulled low if V_{OUT} drops below $4.0V \pm 5\%$, and the POK2 open drain output is pulled low if V_{OUT} drops below $4.4V \pm 5\%$.

Under-Voltage Lockout

Circuits other than the MicroPower voltage detector (SESDet) require voltage to be present on IN. Under-voltage lockout guarantees that sufficient voltage is present on IN to ensure operation. All functions other than the SESDET flag are disabled if the voltage on IN is less than 2V.

Discharge Resistor

In accordance with the USB OTG specification, a pull-down resistor is provided to discharge V_{BUS} at a current of not more than 8mA.

Over-Temperature Protection

If the AAT3125 junction temperature exceeds 125°C , the charge pump is shut down.

Ordering Information
