SOLID STATE
OPTRONICS

1 Form B Solid State Relay

## DESCRIPTION

The AD6C332 is a bi-directional, single-pole, single-throw, normally closed multipurpose solid-state relay. It is designed to replace electromechanical relays in general purpose switching applications. The relay consists of an integrated circuit that drives two rugged source-to-source depletion type DMOS transistors - optically coupled to a light emitting diode. The output MOS transistors are protected with free-wheeling diodes that can handle up to 5A of inrush current, making the relay ideal for switching lamps and highly inductive loads.

## FEATURES

- Low On-resistance (10 Ohms MAX)
- Low input control power consumption (2.5mA TYP)
- 200 mA maximum continuous load current
- High input-to-output isolation
- Long life/high reliability

## OPTIONS/SUFFIXES*

- -S Surface Mount Leadform Option
- -TR Tape and Reel Option

NOTE: Suffixes listed above are not included in marking on device for part number identification.

## SCHEMATIC DIAGRAM

## APPLICATIONS

- Reed relay replacement
- Meter reading systems
- Medical equipment
- Battery monitoring
- Multiplexers

## ABSOLUTE MAXIMUM RATINGS*

| PARAMETER | UNIT | MIN | TYP | MAX |
| :--- | :---: | :---: | :---: | :---: |
| Storage Temperature | ${ }^{\circ} \mathrm{C}$ | -55 |  | 125 |
| Operating Temperature | ${ }^{\circ} \mathrm{C}$ | -40 |  | 85 |
| Continuous Input Current | mA |  |  | 40 |
| Transient Input Current | mA |  |  | 400 |
| Reverse Input Control <br> Voltage | V | 6 |  |  |
| Output Power Dissipation | mW |  |  | 800 |

*The values indicated are absolute stress ratings. Functional operation of the device is not implied at these or any conditions in excess of those defined in electrical characteristics section of this document. Exposure to Absolute Ratings may cause permanent damage to the device and may adversely affect reliability.

## APPROVALS

- BABT CERTIFICATE \#607836

BS EN 60950, BS EN 41003, BS EN 60065

- CSA CERTIFICATE \#LR111581-1

Solid State Optronics (SSO) makes no warranties or representations with regards to the completeness and accuracy of this document. SSO reserves the right to make changes to product description, specifications at any time without further notice.
SSO shall not assume any liability arising out of the application or use of any product or circuit described herein. Neither circuit patent licenses nor indemnity are expressed or implied.
Except as specified in SSO's Standard Terms \& Conditions, SSO disclaims liability for consequential or other damage, and we make no other warranty, expressed or implied, including merchantability and fitness for particular use.

## LIFE SUPPORT POLICY

SSO does not authorize use of its devices in life support applications wherein failure or malfunction of a device may lead to personal injury or death. Users of SSO devices in life support applications assume all risks of such use and agree to indemnify SSO against any and all damages resulting from such use. Life support devices are defined as devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when used properly in accordance with instructions for use can be reasonably expected to result in significant injury to the user, or (d) a critical component in any component of a life support device or system whose failure can be reasonably expected to cause failure of the life support device or system, or to affect its safety or effectiveness.
