# Metallized polypropylene filter capacitors

## MKP 416 to 420

MKP RADIAL POTTED TYPE

PITCH 5/10/15 mm

### FEATURES

- 5, 10 and 15 mm lead pitch
- Supplied loose in box, in ammpack and taped on reel
- Intermediate values are available of the E96 series.

### APPLICATIONS

- Low losses due to low contact resistance and low loss dielectric result in applications where high frequency occur or high stability is preferred
- Their small dimensions make them suitable for circuits with high packaging density.

### DETAIL SPECIFICATION

For more detailed data and test requirements see "Type detail specification HQN-384-16/101".

### QUICK REFERENCE DATA

DESCRIPTION	VALUE
Capacitance range (E24 series)	0.001 to 1.2 $\mu$ F
Capacitance tolerance	$\pm 5\%$ ; $\pm 2\%$
Rated (DC) voltage	63 V; 160 V; 250 V; 400 V; 630 V
Rated (AC) voltage	25 V; 63 V; 100 V; 125 V; 160 V
Rated peak-to-peak voltage	70 V; 180 V; 280 V; 350 V; 450 V
Climatic category	55/085/56
Rated temperature (DC)	85 °C
Rated temperature (AC)	85 °C
Maximum application temperature	85 °C
Reference specification	IEC 60384-16
Performance grade	grade 1 (long life)
Stability grade	grade 1
Materials	qualified in accordance with UL94 V-0

# Metallized polypropylene filter capacitors

# MKP 416 to 420

## CONSTRUCTION

### Description

- Low-inductive wound cell of metallized polypropylene (PP) film, potted with epoxy resin in a flame-retardant case
- Radial leads, solder-coated
  - Copper clad steel wire for pitch = 2e, 4e and 6e (case size 1750 and 1760)
  - Copper wire pitch = 6e (case size 1770, 1785 and 1710)
- Solder-plated copper-clad steel wire to ensure good resistance to soldering heat
- Small stand-off pips allow removal of solder flux etc. during cleaning of the printed-circuit board.

### Mounting

#### NORMAL USE

The capacitors are designed for printed-circuit board applications. The capacitors packed in bandoliers are designed for mounting on printed-circuit boards by means of automatic insertion machines. For detailed specifications refer to this handbook, chapter "Packaging information".

#### SPECIFIC METHOD OF MOUNTING TO WITHSTAND VIBRATION AND SHOCK

In order to withstand vibration and shock tests, it must be ensured that the stand-off pips are in good contact with the printed-circuit board.

The capacitors shall be mechanically fixed by the leads.

#### SPACE REQUIREMENTS ON PRINTED-CIRCUIT BOARD

The maximum length and width of film capacitors is shown in Fig.17:

- Eccentricity as in Fig.17. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.
- Product height with seating plane as given by "IEC 60717" as reference:  $h_{\max} \leq h + 0.3 \text{ mm}$ .

### Storage temperature

- Storage temperature:  $T_{\text{stg}} = -25$  to  $+40$  °C with RH maximum 80% without condensation.

### RATINGS AND CHARACTERISTICS REFERENCE CONDITIONS

Unless otherwise specified, all electrical values apply at an ambient free air temperature of  $23 \pm 1$  °C, an atmospheric pressure of 86 to 106 kPa and a relative humidity of  $50 \pm 2\%$ .

For reference testing, a conditioning period shall be applied over  $96 \pm 4$  hours by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20%.

## CHARACTERISTICS

### Capacitance

Fig.18 Capacitance change at 1 kHz as a function of temperature.

### Impedance

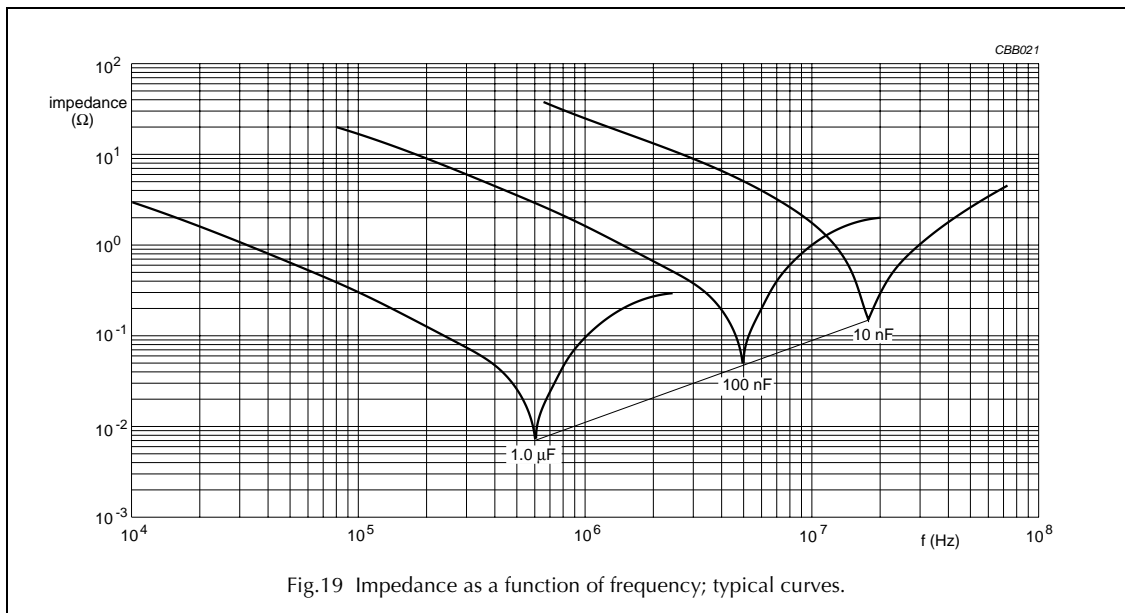

Fig.19 Impedance as a function of frequency; typical curves.

**Metallized polypropylene filter capacitors**

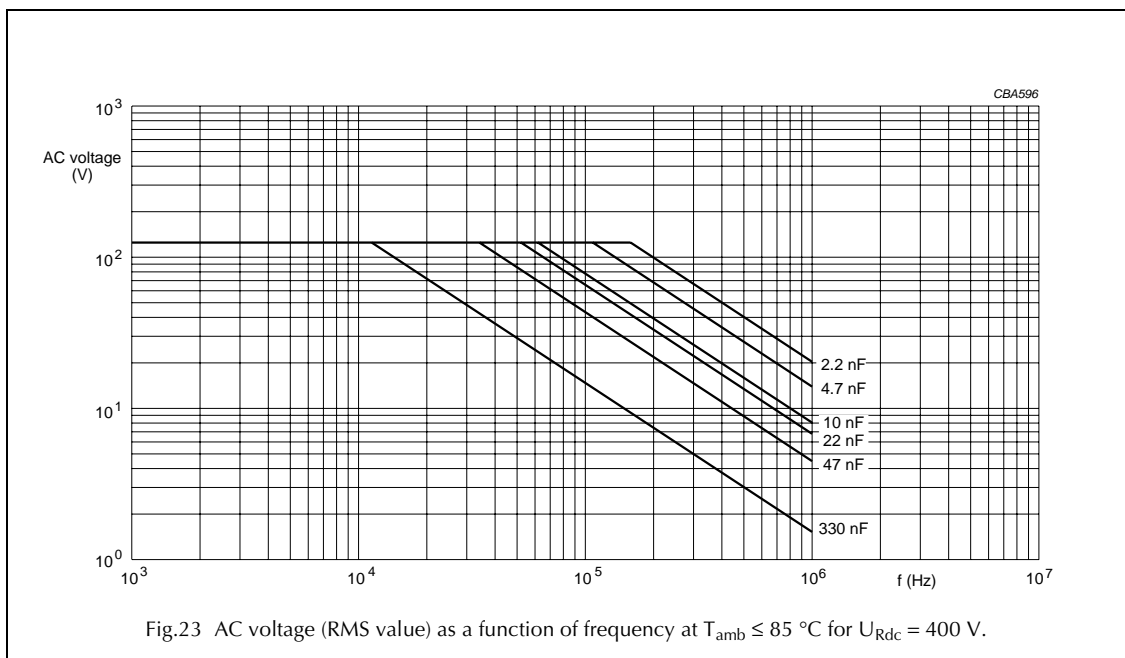

**MKP 416 to 420**

**Maximum RMS voltage (sinewave) as a function of frequency**

**Metallized polypropylene filter capacitors**

**MKP 416 to 420**

## Metallized polypropylene filter capacitors

## MKP 416 to 420

**Maximum RMS current (sinewave) as a function of frequency**

The maximum RMS current is defined by  $I_{ac} = \omega \times C \times U_{ac}$ .

$U_{ac}$  is the maximum AC voltage depending on the ambient temperature in Figs 20 to 24.

**Metallized polypropylene filter capacitors**

**MKP 416 to 420**

**Tangent of loss angle**

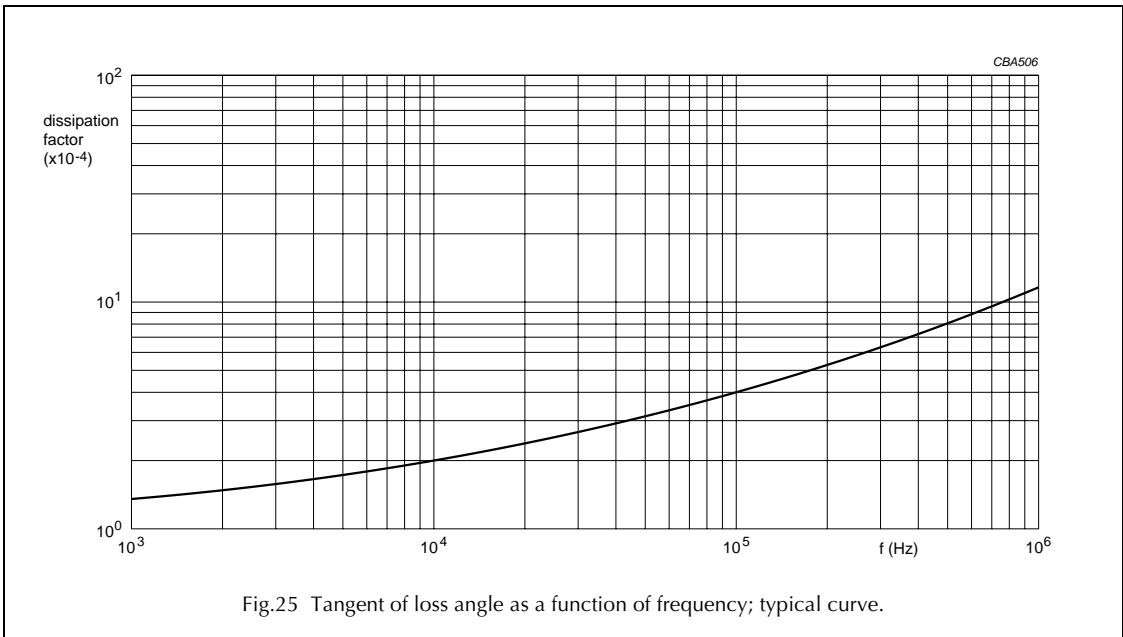

Fig.25 Tangent of loss angle as a function of frequency; typical curve.

**Insulation resistance**

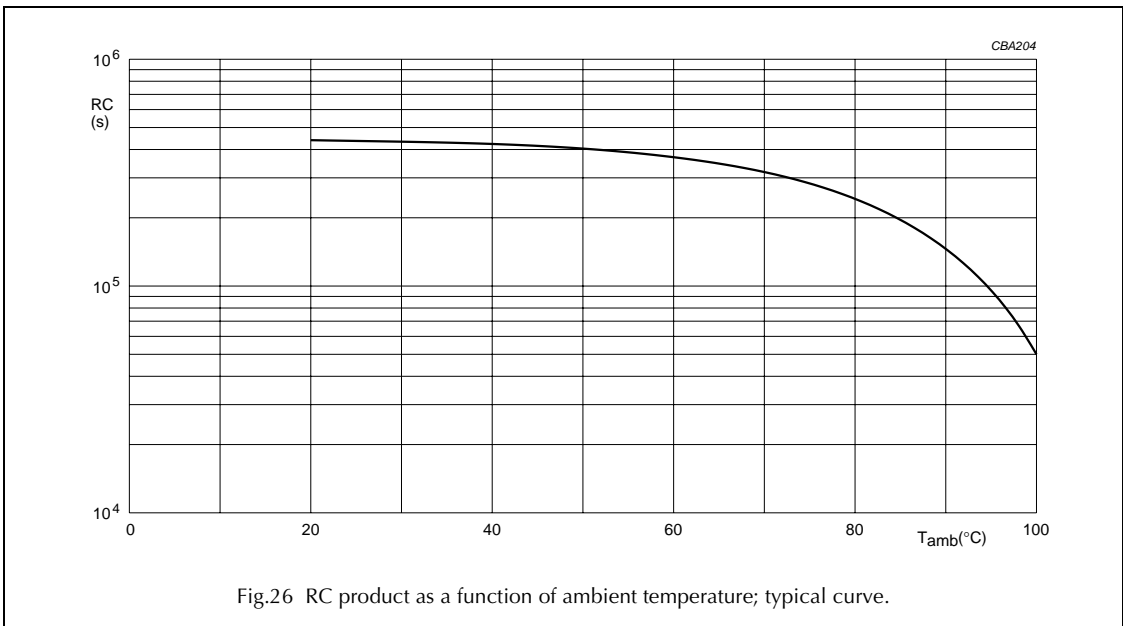

Fig.26 RC product as a function of ambient temperature; typical curve.

**Metallized polypropylene filter capacitors****MKP 416 to 420**

Maximum allowed component temperature rise ( $\Delta T$ ) as a function of the ambient temperature ( $T_{amb}$ )

Fig.27 Maximum allowed component temperature rise as a function of the ambient temperature.

Heat conductivity (G) as a function of pitch and capacitor body thickness in mW/°C

**Table 1** Heat conductivity

$b_{max}$ (mm)	PITCH (mm)		
	5	10	15
3.5	3.0	–	–
4.0	–	6.5	–
4.5	4.0	–	–
5.0	–	7.5	10
6.0	5.5	9.0	11
7.0	–	–	12
8.5	–	–	16
10.0	–	–	18

**Power dissipation and maximum component temperature rise**

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free air ambient temperature.

The power dissipation can be calculated according chapter “Introduction”, section “Maximum power dissipation”.

The component temperature rise ( $\Delta T$ ) can be measured (see section “Measuring the component temperature” for more details) or calculated by  $\Delta T = P/G$  :

- $\Delta T$  = component temperature rise (°C).
- P = power dissipation of the component (mW).
- G = heat conductivity of the component (mW/°C).

## Metallized polypropylene filter capacitors

## MKP 416 to 420

### Measuring the component temperature

A thermocouple must be attached to the capacitor body; see Fig.28.

The temperature is measured in unloaded ( $T_{amb}$ ) and maximum loaded condition ( $T_c$ ).

The temperature rise is given by  $\Delta T = T_c - T_{amb}$ .

To avoid radiation or convection, the capacitor should be tested in a wind-free box.

## Metallized polypropylene filter capacitors

## MKP 416 to 420

### Application note and limiting conditions

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection, as described hereunder. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

To select the capacitor for a certain application, the following conditions must be checked:

1. The peak voltage ( $U_p$ ) shall not be greater than the rated DC voltage ( $U_{Rdc}$ ).
2. The peak-to-peak voltage ( $U_{p-p}$ ) shall not be greater than the maximum  $U_{p-p}$ .
3. The voltage pulse slope ( $dU/dt$ ) shall not exceed the rated voltage pulse slope in an RC-circuit at rated voltage and without ringing. If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by  $U_{Rdc}$  and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left( \frac{dU}{dt} \right)^2 \times dt < U_{Rdc} \times \left( \frac{dU}{dt} \right)_{rated}$$

T is the pulse duration.

4. The maximum component surface temperature rise must be lower than the limits in Fig.27.
5. Since in circuits used at voltages over 280 V peak-to-peak the risk for an intrinsically active flammability after a capacitor breakdown (short circuit) increases, it is recommended that the power to the component is limited to 100 times the values mentioned in Table 1 "Heat conductivity".
6. When using these capacitors in the input filters or as series connected with an impedance to the mains the applicant must guarantee that following conditions are fulfilled in any case (spikes and surge voltages from the mains or line card supply included).

#### VOLTAGE CONDITIONS FOR 6 ABOVE

ALLOWED VOLTAGES	$T_{amb} \leq 85 \text{ }^\circ\text{C}$
Maximum continuous RMS voltage	$U_{Rac}$
Maximum temporary RMS -overvoltage (<24 hours)	$1.25 \times U_{Rac}$
Maximum peak voltage ( $V_{o-p}$ ) (<2 s)	$1.6 \times U_{Rdc}$

### Example

$C = 0.1 \text{ } \mu\text{F} - 250 \text{ V}$  used for the sine voltage signal of  $2 V_{RMS}$  at 1 MHz superimposed on 160 V (DC).

The ambient temperature is 50 °C. The circuit is high ohmic during a capacitor breakdown.

Checking the conditions:

1. The peak voltage  $U_p = 162.8 \text{ V}$  is lower than 250 V (DC).
2. The peak-to-peak voltage 5.6 V is lower than  $2 \times \sqrt{2} \times 100 \text{ V(AC)} = 280 U_{p-p}$ .
3. The signal is not pulsed.
4. This is a sinewave, according the curves in, the capacitor can be applied.
5. Not applicable.
6. Not applicable.

## MARKING

### Product marking

#### CAPACITORS WITH PITCH = 5 mm

The capacitors are marked on the side (see Fig.29) with the following information:

1. Capacitance code in accordance with "IEC 60062": n = nF
2. Tolerance on rated capacitance: G =  $\pm 2\%$ ; J =  $\pm 5\%$
3. Rated (DC) voltage (e.g. 250 V)
4. Code for manufacturer
5. Year and week of manufacture (e.g. 0001)
6. Manufacturers type designation.

#### CAPACITORS WITH PITCH = 10 mm

The capacitors are marked on the front face (see Fig.30) with the following information:

1. Year and week of manufacture (e.g. 0001)
2. Capacitance code in accordance with "IEC 60062"
3. Tolerance on rated capacitance: G =  $\pm 2\%$ ; J =  $\pm 5\%$
4. Rated (DC) voltage (e.g. 160 V)
5. Code for dielectric material (MKP)
6. Manufacturer's type designation (e.g. 417)
7. Code for manufacturer
8. Code for factory of origin (HQ).

#### CAPACITORS WITH PITCH = 15 mm

The capacitors are marked on the top (see Fig.31) with the following information:

1. Rated capacitance code in accordance with "IEC 60062"
2. Tolerance on rated capacitance: G =  $\pm 2\%$ ; J =  $\pm 5\%$
3. Rated voltage (DC) (e.g. 63 V)
4. Manufacturer's type designation (416)
5. Code for dielectric material (MKP);

and on the side with the following information:

1. Manufacturer
2. Code for factory of origin (HQ)
3. Year and week of manufacture (e.g. 0001).

**Metallized polypropylene filter capacitors****MKP 416 to 420****Package marking**

The package containing the capacitors is marked as shown in Fig.32.
