

MIC5841/5842

8-Bit Serial-Input Latched Drivers

General Description

Using BiCMOS technology, the MIC5841/5842 integrated circuits were fabricated to be used in a wide variety of peripheral power driver applications. The devices each have an eight-bit CMOS shift register, CMOS control circuitry, eight CMOS data latches, and eight bipolar current-sink Darlington output drivers.

These two devices differ only in maximum voltage ratings. The MIC5842 offers premium performance with a minimum output breakdown voltage rating of 80V (50V sustaining). The drivers can be operated with a split supply where the negative supply is down to -20V.

The 500mA outputs, with integral transient-suppression diodes, are suitable for use with lamps, relays, solenoids and other inductive loads.

These devices have improved speed characteristics. With a 5V logic supply, they will typically operate faster than 5 MHz. With a 12V supply, significantly higher speeds are obtained. The CMOS inputs are compatible with standard CMOS, PMOS, and NMOS logic levels. TTL or DTL circuits may require the use of appropriate pull-up resistors. By using the serial data output, the drivers can be cascaded for interface applications requiring additional drive lines.

The MIC5840 family is available in DIP, PLCC, and SOIC packages. Because of limitations on package power dissipation, the simultaneous operation of all drivers at maximum rated current might require a reduction in duty cycle. A copper-alloy lead frame provides for maximum package power dissipation.

Features

- 3.3 MHz Minimum Data-Input Rate
- CMOS, PMOS, NMOS, TTL Compatible
- Internal Pull-Up/Pull-Down Resistors
- Low-Power CMOS Logic and Latches
- High-Voltage Current-Sink Outputs
- Output Transient-Protection Diodes
- Single or Split Supply Operation

Ordering Information

Part Number		Temperature Range	Package
Standard	Pb-Free		
MIC5841BN	MIC5841YN	-40°C to +85°C	18-Pin Plastic DIP
MIC5841BV	MIC5841YV	-40°C to +85°C	20-Pin PLCC
MIC5841BWM	MIC5841YWM	-40°C to +85°C	18-Pin Wide SOIC
MIC5842BN	MIC5842YN	-40°C to +85°C	18-Pin Plastic DIP
MIC5842BV	MIC5842YV	-40°C to +85°C	20-Pin PLCC
MIC5842BWM	MIC5842YWM	-40°C to +85°C	18-Pin Wide SOIC

		$V_{DD} = 5.0\text{V}$	50		
Supply Current	$I_{DD(ON)}$	All Drivers ON, $V_{DD} = 12\text{V}$		16	mA
		All Drivers ON, $V_{DD} = 10\text{V}$		14	
		All Drivers ON, $V_{DD} = 5.0\text{V}$		8	
	$I_{DD(OFF)}$	All Drivers OFF, $V_{DD} = 12\text{V}$		2.9	
		All Drivers OFF, $V_{DD} = 5.0\text{V}$		2.1.6	
Clamp Diode Leakage Current	I_R	MIC5841A $V_R = 50\text{V}$		1.6	μA
		MIC5842A $V_R = 80\text{V}$		100	

Notes:

1. For Inductive load applications.
2. Derate at the rate of $18.2\text{mW}/^\circ\text{C}$ above $T_A = 25^\circ\text{C}$ (Plastic DIP)
3. CMOS devices have input-static protection but are susceptible to damage when exposed to extremely high static electrical charges.
4. Operation of these devices with standard TTL may require the use of appropriate pull-up resistors to insure an input logic HIGH.
5. Not 100% tested. Guaranteed by design.

Typical Output Driver

Typical Input Circuits

Maximum Allowable Duty Cycle (Plastic DIP)
