TS922

Rail-to-rail high output current dual operational amplifier

Features

- Rail-to-rail input and output
- Low noise: 9nV/√Hz
- Low distortion
- High output current: 80mA (able to drive 32Ω loads)
- High-speed: 4MHz, 1V/µs
- Operating from 2.7V to 12V
- Low input offset voltage: 900µV max (TS922A)
- ESD Internal protection: 2kV
- Latch-up immunity
- Macromodel included in this specification
- Dual version available in flip-chip package

(Plastic micropackage)

P
TSSOP8
(Thin shrink small outline package)

Description

The TS922 is a rail-to-rail dual BiCMOS operational amplifier optimized and fully specified for 3V and 5V operation.

The device's high output current allows low-load impedances to be driven.

Very low noise, low distortion, low offset and a high output current capability make this device an excellent choice for high quality, low voltage or battery operated audio systems.

The device is stable for capacitive loads up to 500pF.

Applications

- Headphone amplifier
- Sound cards, multimedia systems
- Line driver, actuator driver
- Servo amplifier
- Mobile phone and portable equipment
- Instrumentation with low noise as key factor
- Piezoelectric speaker driver

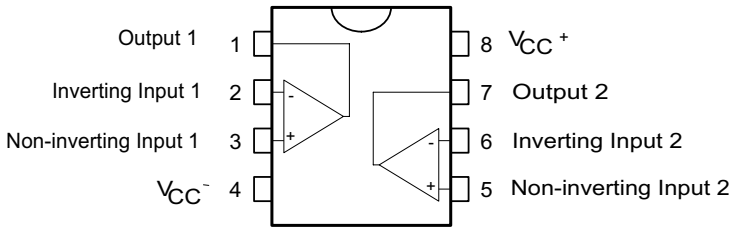

Figure 2. Pin-out for flip-chip package (top view)

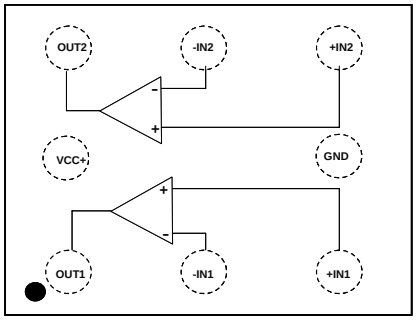

2 Absolute maximum ratings and operating conditions

Table 1. Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage (1)	14	V
V_{id}	Differential input voltage (2)	±1	V
V_{in}	Input voltage (3)	V_{DD}-0.3 to V_{CC}+0.3	V
T_{stg}	Storage temperature	-65 to +150	°C
R_{thja}	Thermal resistance junction to ambient (4) SO8 TSSOP8 DIP8 Flip-chip	 125 120 85 90	°C/W
R_{thjc}	Thermal resistance junction to case SO8 TSSOP8 DIP8	 40 37 41	°C/W
T_j	Maximum junction temperature	150	°C
ESD	HBM: human body model(5) MM: machine model(6) CDM: charged device model	2 100 1.5	kV V kV
	Output short circuit duration	see note(7)	
	Latch-up immunity	200	mA
	Soldering temperature (10sec), leaded version Soldering temperature (10sec), unleaded version	250 260	°C

1. All voltage values, except differential voltage are with respect to network ground terminal.
2. Differential voltages are the non-inverting input terminal with respect to the inverting input terminal. If V_{id} > ±1V, the maximum input current must not exceed ±1mA. In this case (V_{id} > ±1V) an input series resistor must be added to limit input current.
3. Do not exceed 14V.
4. Rth are typical values.
5. Human body model, 100pF discharged through a 1.5kΩ resistor into pin of device.
6. Machine model ESD, a 200pF cap is charged to the specified voltage, then discharged directly into the IC with no external series resistor (internal resistor < 5Ω), into pin of device.
7. There is no short-circuit protection inside the device: short-circuits from the output to V_{CC} can cause excessive heating. The maximum output current is approximately 80mA, independent of the magnitude of V_{CC}. Destructive dissipation can result from simultaneous short-circuits on all amplifiers.

Table 2. Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	2.7 to 12	V
V_{icm}	Common mode input voltage range	V_{DD} -0.2 to V_{CC} +0.2	V
T_{oper}	Operating free air temperature range	-40 to +125	°C

3 Electrical characteristics

Table 3. Electrical characteristics measured at V_{CC} = +3V, V_{DD} = 0V, V_{icm} = V_{CC}/2, T_{amb} = 25°C, and R_L connected to V_{CC}/2 (unless otherwise specified)

4 Macromodel

4.1 Important note concerning this macromodel

Please consider the following remarks before using this macromodel.

- All models are a trade-off between accuracy and complexity (i.e. simulation time).
- Macromodels are not a substitute to breadboarding; rather, they confirm the validity of a design approach and help to select surrounding component values.
- A macromodel emulates the **nominal** performance of a **typical** device within **specified operating conditions** (temperature, supply voltage, for example). Thus the macromodel is often not as exhaustive as the datasheet, its purpose is to illustrate the main parameters of the product.

Data derived from macromodels used outside of the specified conditions (V_{CC}, temperature, for example) or even worse, outside of the device operating conditions (V_{CC}, V_{icm}, for example), is not reliable in any way.

Section 4.2 presents the electrical characteristics resulting from the use of these macromodels.

4.2 Electrical characteristics from macromodelization

Table 5. Electrical characteristics resulting from macromodel simulation at V_{CC} = 3V, V_{DD} = 0V, R_L, C_L connected to $V_{CC}/2$, T_{amb} = 25°C (unless otherwise specified)

Symbol	Conditions	Value	Unit
V_{io}		0	mV
A_{vd}	R_L = 10kΩ	200	V/mV
I_{CC}	No load, per operator	1.2	mA
V_{icm}		-0.2 to 3.2	V
V_{OH}	R_L = 10kΩ	2.95	V
V_{OL}	R_L = 10kΩ	25	mV
I_{sink}	V_O = 3V	80	mA
I_{source}	V_O = 0V	80	mA
GBP	R_L = 600kΩ	4	MHz
SR	R_L = 10kΩ, C_L = 100pF	1.3	V/µs
ϕm	R_L = 600kΩ	68	Degrees

5 Package mechanical data

In order to meet environmental requirements, STMicroelectronics offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an STMicroelectronics trademark. ECOPACK specifications are available at: www.st.com.
