HM100470

4096-word × 1-bit Fully Decoded Random Access Memory

The HM100470 is a 4096-words x 1-bit, read/write, random access memory developed for high speed systems such as scratch pads and control buffer storages.

The fabrication process is the Hitachi's low capacitance, oxide isolation method with double metalization.

The HM100470 is compatible with the HD100K ECL families and includes on-chip voltage and temperature compensation for improved noise margin. This device is encapsulated in cerdip-18pin package, compatible with Fairchild's F100470.
