CY3620/CY3620J

Warp2ISR™ VHDL ISR™ Design Kit for CPLDs

Features

- Complete design and programming kit for In-System Reprogrammable™ (ISR™) CPLDs
- Industry-leading Warp2® design software for VHDL
- Easy-to-use ISR PC programmer for on-board programming
- 37000 UltraISR programming cable supports all Ultra37000™ CPLDs (For ISR programming of FLASH370i™ devices, please refer to the CY3600i data sheet.)
- Standard Windows® GUI
- Ultra37000 Prototype Board
- Year 2000 Compliant

for programming. The ISR programmer connects the PC parallel port directly to your board, allowing you to easily reprogram devices when you make design changes. Multiple devices can be programmed in series, and ISR devices are cascadable with other IEEE 1149.1 compliant devices for convenient programming.

Functional Description

Warp2ISR™ VHDL is a complete ISR CPLD design and programming solution. Warp2 VHDL and the Ultra37000 ISR Programming Kit are included in Warp2ISR VHDL. Warp2 VHDL is a state-of-the-art HDL compiler for designing with Cypress's Complex Programmable Logic Devices (CPLDs) including the new Ultra37000 family of devices. For a complete description of Warp2 VHDL, please see the CY3120 data sheet. For a complete description of the ISR PC programmer, please see the CY3700i Ultra37000 ISR Programming Kit data sheet.

Figure 1 shows the Warp2ISR VHDL kit in action with Warp2 VHDL being used for design and the 37000 UltraISR™ cable

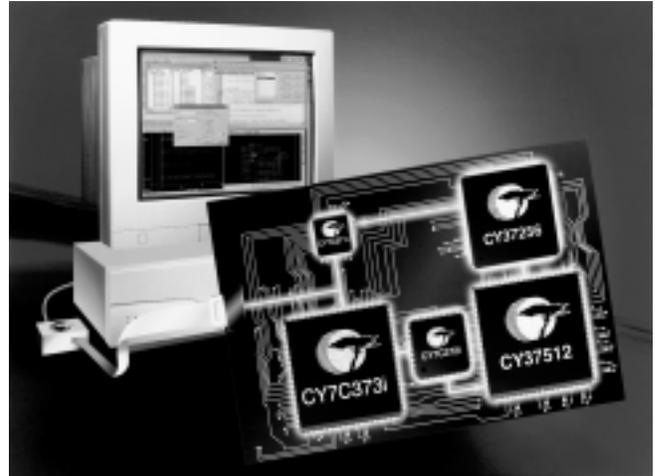

Figure 1. Design and Program with Warp2ISR

Ultra37000 Prototype Board

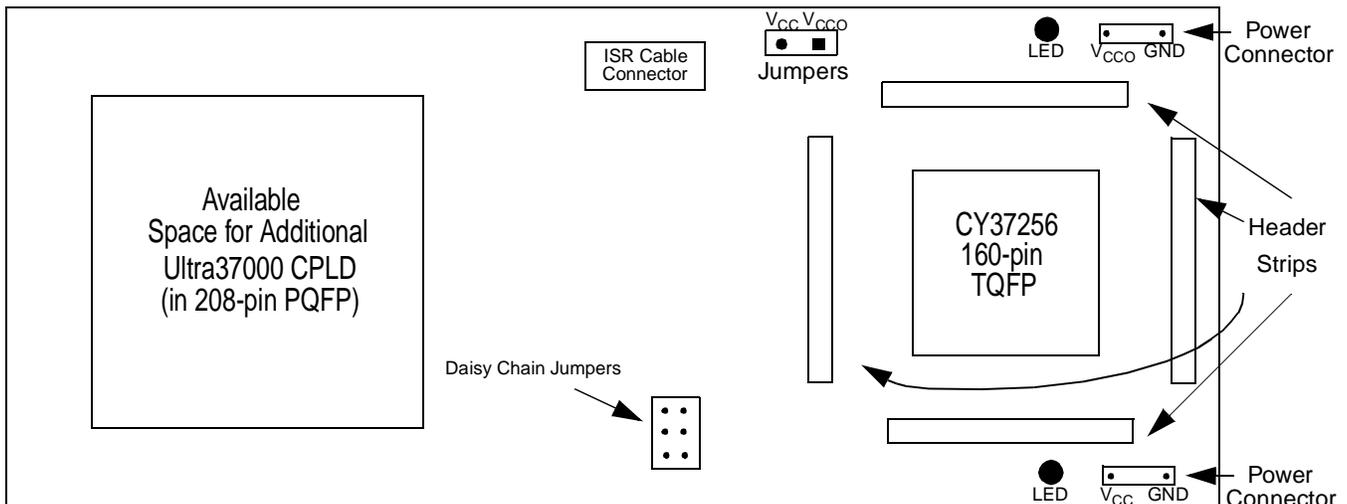

Figure 2. Ultra37000 Prototype Board

To facilitate easy and quick prototyping of designs, an Ultra37000 Prototype Board has been included with Warp2ISR VHDL (see Figure 2 for the basic layout). The prototype comes with a CY37256 160-pin TQFP device already premounted and header strips that facilitate signal testing. Detailed information on the board layout and proper usage may be found in the Cypress application note, "Using the Ultra37000 ISR Prototype Board."

System Requirements

- IBM PC or equivalent (Pentium® class recommended)
- 32 Mbytes of RAM (64 Mbytes recommended)
- 110 Mbytes Disk Space
- CD-ROM drive
- Windows (including Japanese) 95, Windows 98, or Windows NT 4.0

The Ultra37000 ISR Programming Kit requires an additional 3 Mbytes of disk space and one free parallel port.

Ordering Information

Product Code	Description
CY3620R52	<i>Warp2</i> ISR VHDL ISR Design Kit for CPLDs
CY3620JR52	<i>Warp2</i> ISR VHDL ISR Design Kit for CPLDs (Japanese)

*Warp2*ISR VHDL includes:

- CD-ROM with *Warp2* and on-line documentation
- 37000 UltraISR programming cable
- CD-ROM with ISR Programming Software Release 2.2
- ISR Application Notes
- *Warp* Release Notes
- Prototype board with a CY37256 160-pin TQFP device
- VHDL for Programmable Logic Textbook
- Registration Card
- Release Notes
