DS78C20/DS88C20

DS78C20/DS88C20 Dual CMOS Compatible Differential Line Receiver

General Description

The DS78C20 and DS88C20 are high performance, dual differential, CMOS compatible line receivers for both balanced and unbalanced digital data transmission. The inputs are compatible with EIA and Federal Standards.

Input specifications meet or exceed those of the popular DS7820/DS8820 line receiver, and the pinout is identical.

A response pin is provided for controlling sensitivity to input noise spikes with an external capacitor. Each receiver includes a 180Ω terminating resistor, which may be used optionally on twisted pair lines. The DS78C20 is specified over a -55°C to $+125^\circ\text{C}$ operating temperature range, and the DS88C20 over a 0°C to $+70^\circ\text{C}$ range.

Features

- Meets requirements of EIA Standards RS-232-C RS-422 and RS-423, and Federal Standards 1020 and 1030
- Input voltage range of $\pm 15\text{V}$ (differential or common-mode)
- Separate strobe input for each receiver
- $\frac{1}{2} V_{CC}$ strobe threshold for CMOS compatibility
- $5\text{k}\Omega$ typical input impedance
- 50mV input hysteresis
- 200mV input threshold
- Operation voltage range = 4.5V to 15V
- DS7830/DS8830 or MM78C30/MM88C30 recommended driver

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	18V
Common-Mode Voltage	±25V
Differential Input Voltage	±25V
Strobe Voltage	18V
Output Sink Current	50 mA
Maximum Power Dissipation* at 25°C	
Cavity Package	1364 mW
Molded Package	1280 mW
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 4 seconds)	260°C

*Derate cavity package 9.1 mW/°C; derate molded package 10.2 mW/°C above 25°C.

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the $-55^\circ C$ to $+125^\circ C$ temperature range for the DS78C20 and across the $0^\circ C$ to $+70^\circ C$ range for the DS88C20. All typical values are for $T_A = 25^\circ C, V_{CC} = 5V$ and $V_{CM} = 0V$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: Only one output at a time should be shorted.

Note 5: Refer to EIA-RS-422 for exact conditions.

Typical Applications

RS-422/RS-423 Application

TL/F/5798-2

Note 1: (Optional internal termination resistor.)

- a) Capacitor in series with internal line termination resistor, terminates the line and saves termination power. Exact value depends on line length.
- b) Pin 1 connected to pin 2; terminates the line.
- c) Pin 2 open; no internal line termination.
- d) Transmission line may be terminated elsewhere or not at all.

Note 2: Optional to control response time.

Note 3: V_{CC} 4.5V to 15V for the DS78C20. For further information on line drivers and line receivers, refer to application notes AN-22, AN-83 and AN-108.

RS-232-C Application with Hysteresis

V_{CC}	$R1 \pm 5\%$
5V	4,3 kΩ
10V	15 kΩ
15V	24 kΩ

TL/F/5798-4

TL/F/5798-3

For signals which require fail-safe or have slow rise and fall times, use R1 and D1 as shown above. Otherwise, the positive input (pin 3 or 11) may be connected to ground.
