

## Features

- Low-noise Low Drop Out Voltage Regulator
- 2.8V Fixed Output Voltage
- 3V to 5.5V Supply Operation
- 130 mA Maximum Load Current
- Power-down Mode Consumption Less Than 1  $\mu$ A
- More Than 70 dB (Typical) PSRR at 1 kHz
- 29  $\mu$  V<sub>RMS</sub> Output Noise
- 0.35  $\mu$ m CMOS Technology
- Typical Application: Radio Section Supply in Mobile Terminals

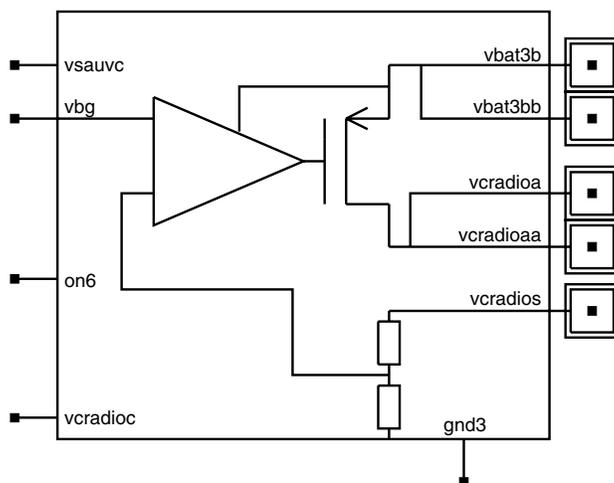

## Description

RE027 is a Low Drop Out (LDO) voltage regulator macrocell with a fixed 2.8V output voltage, rated for loads up to 130 mA. It is designed to be integrated with other analog cells, digital logic, microcontrollers, DSP cores and memory blocks into system-on-chip products.

The circuit consists of a PMOS pass device, an error amplifier and a feedback resistive network, sized to achieve the required closed loop gain. These blocks make up the regulating loop. An over-current and short circuit protection circuit has been included to limit the output current delivered by the regulator, thus avoiding destruction in case of a short circuit.

An external reference voltage (bandgap voltage) is necessary for correct functionality. The target reference voltage is 1.231V delivered, for example, by BG019. Double pads on the supply voltage  $V_{BAT3B}/V_{BAT3BB}$  and output voltage  $V_{CRADIOA}/V_{CRADIOAA}$  are used to reduce the total output resistance. Current reference is generated inside the cell through a circuit supplied by a  $2.5V \pm 0.1V$  regulated input voltage on  $V_{SAUVC}$ . Remote sense terminal  $V_{CRADIOS}$  provides regulation at the load by connecting it to the output terminal near a critical point to improve performance of the regulator (e.g., connecting them at the package pin by double-bonding, thus avoiding the bonding resistance influence). A capacitor of 2.2  $\mu$ F connected from  $V_{CRADIOA}/V_{CRADIOAA}$  to ground is needed as external compensation.

## Absolute Maximum Ratings\*

$V_{IN}$ .....	-0.3V to 6.5V
Digital Signals.....	-0.3V to 5.5V
Output Current.....	Internally Limited
Junction Temperature .....	-40°C to 150°C

\*NOTICE: Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
