LOW POWER DISSIPATION ADSL LINE DRIVER

FEATURES

- **Low Power Dissipation Increases ADSL Line Card Density**
- **Low THD of –88 dBc (100-Ω, 1 MHz)**
- **Low MTPR Driving +20 dBm on the Line**
  - **–76 dBc With High Bias Setting**
  - **–74 dBc With Low Bias Setting**
- **Wide Output Swing of 44V_{PP} Differential Into a 200 Ω Differential Load (V_{CC} = ±12 V)**
- **High Output Current of 600 mA (Typ)**
- **Wide Supply Voltage Range of ±5 V to ±15 V**
- **Pin Compatible With EL1503C and EL1508C**
  - **Multiple Package Options**
- **Multiple Power Control Modes**
  - **11 mA/ch Full Bias Mode**
  - **7.5 mA/ch Mid Bias Mode**
  - **4 mA/ch Low Bias Mode**
  - **0.25 mA/ch Shutdown Mode**
  - **I_{ADJ} Pin for User Controlled Bias Current**
  - **Stable Operation Down to 2 mA/ch**
- **Low Noise for Increased Receiver Sensitivity**
  - **3.2 nV/√Hz Voltage Noise**
  - **1.5 pA/√Hz Noninverting Current Noise**
  - **10 pA/√Hz Inverting Current Noise**

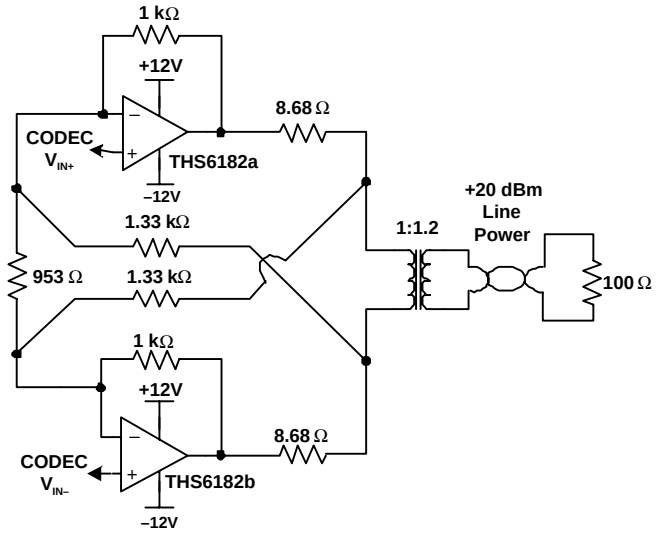
APPLICATIONS

- **Ideal for Full Rate ADSL Applications**

DESCRIPTION

The THS6182 is a current feedback differential line driver ideal for full rate ADSL systems. Its extremely low power dissipation is ideal for ADSL systems that must achieve high densities in ADSL central office rack applications. The unique architecture of the THS6182 allows the quiescent current to be much lower than existing line drivers while still achieving very high linearity without the need for excess open loop gain. Fixed multiple bias settings of the amplifiers allow for enhanced power savings for line lengths where the full performance of the amplifier is not required. To allow for even more flexibility and power savings, an I_{ADJ} pin is available to further lower the bias currents while maintaining stable operation with as little as 2 mA per channel. The wide output swing of 44 V_{pp} differentially with ±12V power supplies allows for more dynamic headroom, keeping distortion at a minimum. With a low 3.2 nV/√Hz voltage noise coupled with a low 10 pA/√Hz inverting current noise, the THS6182 increases the sensitivity of the receive signals, allowing for better margins and reach.

Typical ADSL CO Line Driver Circuit Utilizing Active Impedance



Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage.

PACKAGE DISSIPATION RATINGS(1)

PACKAGE	PowerPAD SOLDERED(2) Θ_{JA}	PowerPAD NOT SOLDERED(3) Θ_{JA}	Θ_{JC}
RHF-24	32°C/W	74°C/W	1.7°C/W
D-16	–	62.9°C/W	25.7°C/W
DW-20	–	45.4°C/W	16.4°C/W

(1) Θ_{JA} values shown are typical for standard test PCBs only.
(2) For high power dissipation applications, use of the PowerPAD package and soldering the PowerPAD to the PCB is required. Failure to do so may result in reduced reliability and/or lifetime of the device. See TI technical brief SLMA002 for more information about utilizing the PowerPAD thermally enhanced package.
(3) Use of packages without the PowerPAD or not soldering the PowerPAD to the PCB, should be limited to low-power dissipation applications.

ABSOLUTE MAXIMUM RATINGS

Lead temperature, 1,6 mm (1/16–inch) from case for 10 seconds	300°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) The THS6182 may incorporate a PowerPAD on the underside of the chip. This acts as a heatsink and must be connected to a thermally dissipating plane for proper power dissipation. Failure to do so may result in exceeding the maximum junction temperature that could permanently damage the device. See TI Technical Brief SLMA002 for more information about utilizing the PowerPAD thermally enhanced package.
(3) The absolute maximum temperature under any condition is limited by the constraints of the silicon process.
(4) The maximum junction temperature for continuous operation is limited by package constraints. Operation above this temperature may result in reduced reliability and/or lifetime of the device.
