Clock Generator for PowerQUICC and PowerPC Microprocessors and Microcontrollers

MPC9817

MICROPROCESSOR CLOCK GENERATOR

The MPC9817 is a PLL-based clock generator specifically designed for Freescale Semiconductor Microprocessor and Microcontroller applications including the PowerPC and PowerQUICC. This device generates the microprocessor input clock and other microprocessor system and bus clocks at any one of four output frequencies. These frequencies include the popular 33- and 66-MHz PCI bus frequencies. The device offers five low-skew clock outputs plus three reference outputs. The clock input reference is 25 MHz and may be derived from an external source or by the addition of a 25-MHz crystal to the on-chip crystal oscillator. The extended temperature range of the MPC9817 supports telecommunication and networking requirements.

Features

- 5 LVCMOS outputs for processor and other system circuitry
- 3 Buffered 25-MHz reference clock outputs
- Crystal oscillator or external reference input
- 25-MHz input reference frequency
- Selectable output frequencies include: 25, 33, 50, or 66 MHz
- Low cycle-to-cycle and period jitter
- Package: 20-lead SSOP
- 3.3-V supply
- Supports computing, networking, and telecommunications applications
- Ambient temperature range: –40°C to +85°C

Functional Description

The MPC9817 uses a PLL with a 25-MHz input reference frequency to generate a single bank of five configurable LVCMOS output clocks. The output frequency of this bank is configurable to either 25, 33, 50, or 66 MHz by two FSEL pins. The 25-MHz reference may be either an external frequency source or a 25-MHz crystal. The 25-MHz crystal is directly connected to the XTAL_IN and XTAL_OUT pins with no additional components required. An external reference may be applied to the XTAL_IN pin with the XTAL_OUT pin left floating. The input reference, whether provided by a crystal or an external input, is also directly buffered to a second bank of three LVCMOS outputs. These outputs may be used as the clock source for processor I/O applications such as an Ethernet PHY. When FSEL0 and FSEL1 are both configured low, the QA outputs are directly fed from the input reference providing a total of eight low-skew 25-MHz outputs. For all other combinations of FSEL0 and FSEL1 the single-ended LVCMOS outputs provide five low-skew outputs for use in driving a microprocessor or microcontroller clock input as well as other system components.

The MPC9817 is packaged in a 20-lead SSOP package.

MPC9817 OPERATION

Crystal Oscillator

The MPC9817 features a fully integrated Pierce oscillator to minimize system implementation costs. Other than the addition of a 25-MHz crystal, no external components are required.The crystal selection should be: 25 MHz, parallel resonant type with a load specification of C_L = 10 pF. Crystals with a load specification of C_L = 20 pF may be used, however, the reference frequency may be higher than the specified 25 MHz. Externally supplied capacitors on both the XTAL_IN and XTAL_OUT pins may be used to trim the frequency as desired.

The crystal should be located as close to the MPC9817 XTAL_IN and XTAL_OUT pins as possible to avoid any board level parasitic.

Table 3. Crystal Specifications

Parameter	Value
Crystal Cut	Fundamental AT Cut
Resonance	Parallel Resonance
Shunt Capacitance (C_L)	5–7 pF
Load Capacitance (C_O)	10 pF
Equivalent Series Resistance (ESR)	20–60 Ω

Power Supply Bypassing

The MPC9817 should have all V_{DD} pins bypassed with 0.01 capacitors and a minimum of one 1.0 capacitor for the overall package. All capacitors should be located as close to the SSOP pins as possible.

External Clock Source

An external reference source of 25 MHz may be applied to the XTAL_IN pin. In this mode of operation, the XTAL_OUT pin should be left floating.

Table 4. Absolute Maximum Ratings[1]

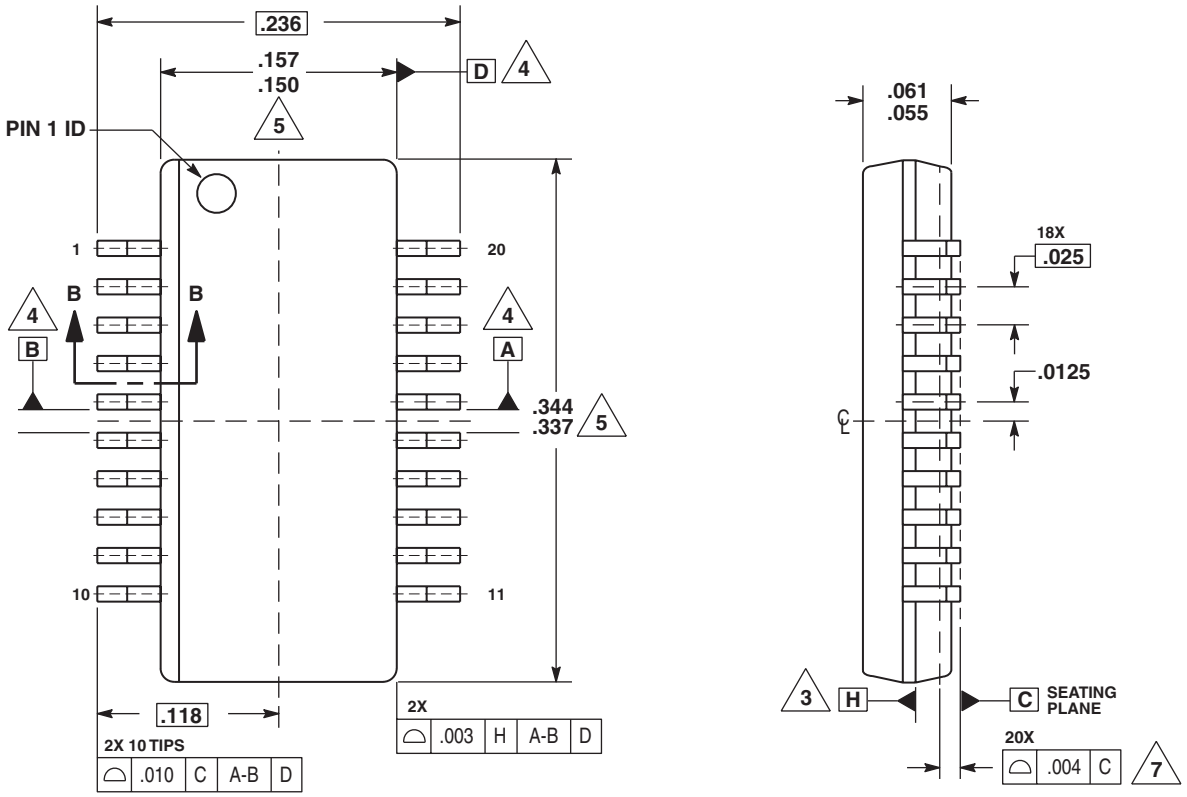
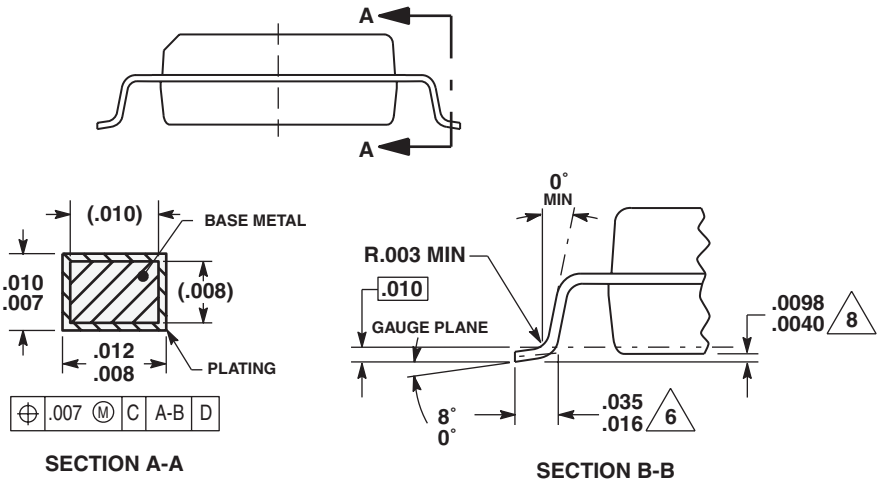
PACKAGE DIMENSIONS





NOTES:
1. DIMENSIONS ARE IN INCHES.
2. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 1994.
3. DATUM PLANE H LOCATED AT MOLD PARTING LINE AND COINCIDENT WITH LEAD, WHERE LEAD EXITS PLASTIC BODY AT BOTTOM OF PARTING LINE.
4. DATUM A, B AND D TO BE DETRMINED WHERE CENTERLINE BETWEEN LEADS EXITS PLASTIC BODY AT DATUM PLANE H.
5. THIS DIMENSION DOES NOT INCLUDE MOLD FLASH OR PROTRUSIONS, BUT DO INCLUDE MOLD MISMATCH AND ARE MEASURED AT THE MOLD PARTING LINE. MOLD FLASH OR PROTRUSIONS SHALL NOT EXCEED .006 INCHES FOR ENDS AND .008 INCHES FOR SIDES.
6. THIS DIMENSION IS LENGTH OF TERMINAL FOR SOLDERING A SUBSTRATE.
7. FORMED LEADS SHALL BE PLANAR WITH RESPECT TO ONE ANOTHER WITHIN .004 INCHES AT SEATING PLANE.
8. THIS DIMENSION IS DEFINED AS THE DISTANCE FROM THE SEATING PLANE TO THE LOWEST POINT OF THE PACKAGE BODY.
