DESCRIPTION

Using BiCMOS wafer fabrication technology allows the DG9421/DG9422 to operate on single and dual supplies.

Designed for optimal performance at single 5 V and dual $\pm$5 V, the DG9421/9422 combine low and flat on-resistance (3 Ω), fast speed (t_{ON} = 38 ns) and low charge injection (less than 1 pC) and is well suited for applications where signal switching accuracy, low noise and low distortion is critical.

The DG9421 and DG9422 respond to opposite control logic as shown in the Truth Table.

a. Refer to PROCESS OPTION FLOWCHART.
b. Room = 25°C, Full = as determined by the operating temperature suffix.
c. Typical values are for DESIGN AID ONLY, not guaranteed nor subject to production testing.
d. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this data sheet.
e. Guaranteed by design, not subject to production test.
f. V_{IN} = input voltage to perform proper function.
g. Leakage parameters are guaranteed by worst case test conditions and not subject to test.
