

4510B

UP/DOWN DECADE COUNTER

DESCRIPTION — The 4510B is an Edge-Triggered Synchronous Up/Down BCD Counter with a Clock Input (CP), an active HIGH Up/Down Count Control Input (Up/Dn), an active LOW Count Enable Input (CE), an asynchronous active HIGH Parallel Load Input (PL), four Parallel Inputs (P₀-P₃), four Parallel Outputs (Q₀-Q₃), an active LOW Terminal Count Output (TC) and an overriding asynchronous Master Reset Input (MR).

Information on the Parallel Inputs (P₀-P₃) is loaded into the counter while the Parallel Load Input (PL) is HIGH, independent of all other input conditions except the Master Reset Input (MR) which must be LOW. With the Parallel Load Input (PL) LOW, the counter changes on the LOW-to-HIGH transition of the Clock Input (CP) if the Count Enable Input (CE) is LOW. The Up/Down Count Control Input (Up/Dn) determines the direction of the count, HIGH for counting up, LOW for counting down. When counting up, the Terminal Count Output (TC) is LOW when the Parallel Outputs Q₀-Q₃ are HIGH and the Count Enable (CE) is LOW. When counting down, the Terminal Count Output (TC) is LOW when all the Parallel Outputs (Q₀-Q₃) and the Count Enable Input (CE) are LOW. A HIGH on the Master Reset Input resets the counter (Q₀-Q₃ = LOW) independent of all other input conditions.

- UP/DOWN COUNT CONTROL
- SINGLE CLOCK INPUT (L→H EDGE-TRIGGERED)
- ASYNCHRONOUS PARALLEL LOAD INPUT
- ASYNCHRONOUS MASTER RESET
- EASILY CASCADABLE

PL (Parallel Load Input) – Asynchronously Loads P into Q, Overriding all Other Inputs
 P (Parallel Input) – Data on this Pin is Asynchronously Loaded into Q, when PL is HIGH Overriding all Other Inputs
 CP (Clock Pulse Input)
 Q, \bar{Q} (True and Complimentary Outputs)
 T (Toggle Input) – Forces the Q output to synchronously toggle when a HIGH is placed on this input.
