- A: The value of R_{θJA} is measured with the device in a still air environment with T_A=25°C.
 - B: The power dissipation P_D is based on T_{J(MAX)}=175°C, using junction-to-case thermal resistance, and is more useful in setting the upper dissipation limit for cases where additional heatsinking is used.
 - C: Repetitive rating, pulse width limited by junction temperature T_{J(MAX)}=175°C.
 - D: The R_{θJA} is the sum of the thermal impedance from junction to case R_{θJC} and case to ambient.
 - E: The static characteristics in Figures 1 to 6 are obtained using <300 μs pulses, duty cycle 0.5% max.
 - F: These curves are based on the junction-to-case thermal impedance which is measured with the device mounted to a large heatsink, assuming a maximum junction temperature of T_{J(MAX)}=175°C.
 - G: The maximum current rating is limited by bond-wires.
