

### LOW DROPOUT VOLTAGE REGULATOR.

The KIA78DS05 series consists of positive fixed output voltage regulator IC capable of sourcing current up to 30mA. Due to the features of low dropout voltage and low standby current, these devices are useful for battery powered equipment. This series includes current limiting, thermal shutdown, over voltage protection, input fault protection and excessive transient protection circuits internally.

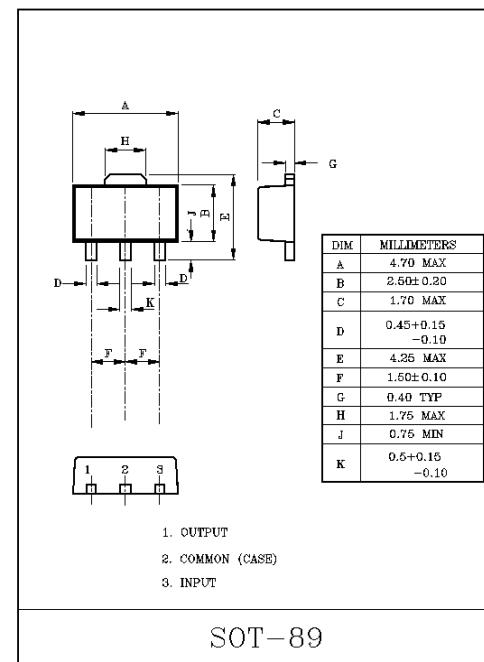

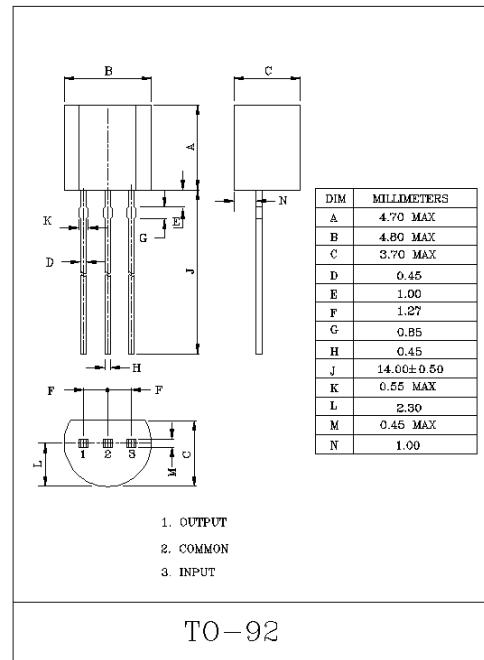

- Low Standby Current of  $500\mu\text{A}$  Typical.
- Maximum Output Current Up to 30mA.
- Low Dropout Votage of Less than 0.3V.
- Multi-protection : Reverse Connection of Power Supply, 60V Load Dump, Thermal Shut Down and Current Limiting.

### MAXIMUM RATINGS ( $T_a=25^\circ\text{C}$ )

| CHARACTERISTIC          | SYMBOL    | RATING      | UNIT |
|-------------------------|-----------|-------------|------|
| Operating Input Voltage | $V_{IN}$  | 29          | V    |
| Input Voltage of Surge  | $V_{IN}$  | 60          | V    |
| Power Dissipation       | $P_D$     | 600         | mW   |
| KIA78DS05BF             |           | 500         |      |
| Operating Temperature   | $T_{opr}$ | -40~85      | °C   |
| Junction Temperature    | $T_j$     | 150         | °C   |
| Storage Temperature     | $T_{stg}$ | -55~150     | °C   |
| Soldering Temperature   | $T_{SOL}$ | 260 (10sec) | °C   |

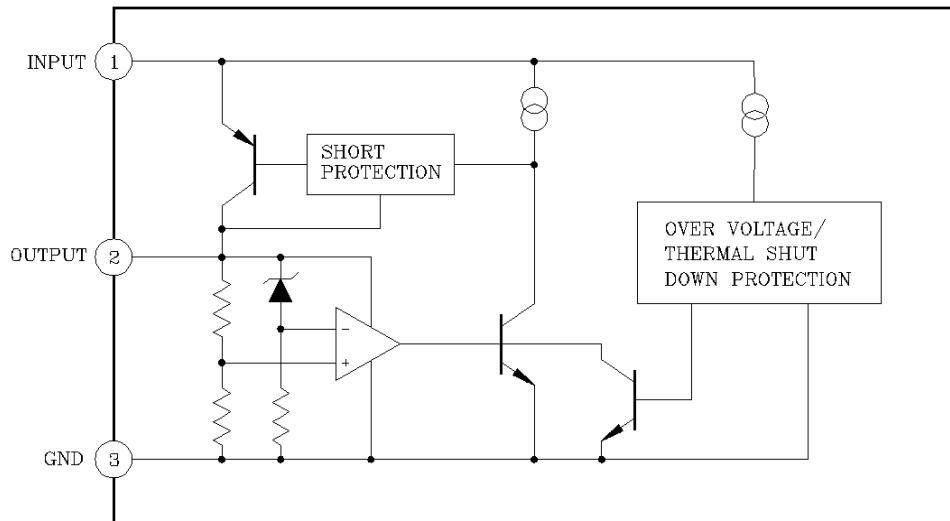

### MARKING

| Type No.    | Marking |
|-------------|---------|
| KIA78DS05BF | 8M      |

## APPLICATION CIRCUIT

Capacitor  $C_2$  must be guaranteed to operate in the temperature range that the regulator should be operated correctly,  $100\mu F$  is a suitable value to suppress the oscillation phenomenon at the output terminal.
