## **NTE1687** **Linear Integrated Circuit** **Dual, 2.5W (7.8W BTL) Audio Amp**

### **Description:**

The NTE1687 is a high performance stereo power amplifier in an 11-Lead SIP type package designed to deliver 1W/Ch into  $4\Omega$  or 2W bridged monaural into  $8\Omega$ . It is ideal for sensitive AM radio applications, exhibiting lower wideband noise, lower distortion, and less AM radiation than conventional designs.

### **Features:**

- Low AM Radiation
- Low Noise
- 3V,  $4\Omega$ , Stereo  $P_O = 250\text{mW}$
- Wide Supply Operation: 3V to 15V
- Low Distortion
- $P_O = 9\text{W}$  Bridged

### **Applications:**

- Compact AM/FM Radios
- Stereo Tape Recorders and Players
- High Power Portable Stereos

### **Absolute Maximum Ratings:**

|  |                 |
|--|-----------------|
| Supply Voltage, $V_S$ .....                              | 18V             |
| Junction Temperature, $T_J$ .....                        | +150°C          |
| Operating Temperature Range (Note 1), $T_{opr}$ .....    | 0°C to +70°C    |
| Storage Temperature Range, $T_{stg}$ .....               | -65°C to +150°C |
| Lead Temperature (During Soldering, 10 sec), $T_L$ ..... | +260°C          |

Note 1. For operation at ambient temperature greater than +25°C, the NTE1687 must be derated based on a maximum +150°C junction temperature using a thermal resistance which depends upon mounting techniques,

**Electrical Characteristics:** ( $T_A = 25^\circ\text{C}$ ,  $A_V = 200$  (46dB),  $T_{\text{TAB}} = 25^\circ\text{C}$ ,  $V_S = 12\text{V}$ ,  $R_L = 8\Omega$ , unless otherwise specified)

| Parameter                           | Test Conditions   |  | Min | Typ | Max  | Unit |
|-------------------------------------|---|--|-----|-----|------|------|
