

ON1109

Photo Interrupter

For contactless SW, object detection

■ Outline

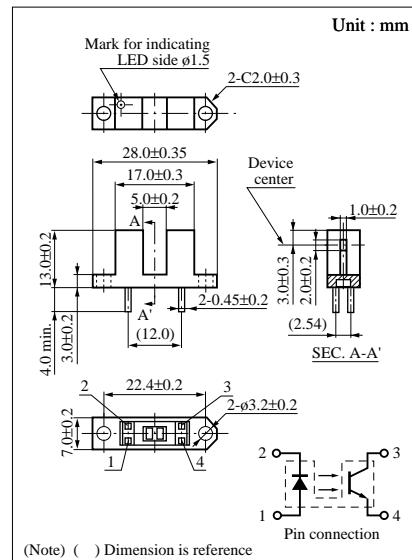

ON1109 is a photocoupler in which a high efficiency GaAs infrared light emitting diode is used as the light emitting element, and a high sensitivity phototransistor is used as the light detecting element. The two elements are arranged so as to face each other, and objects passing between them are detected.

■ Features

- Highly precise position detection : 0.7 mm
- Fast response : $t_r, t_f = 6 \mu\text{s}$ (typ.)
- Small output current variation against change in temperature
- Deep and wide gap between emitting and detecting elements

■ Absolute Maximum Ratings ($T_a = 25^\circ\text{C}$)
