

SP2524

Low ESR Cap. & Low Power High-speed CMOS LDO With CE Pin

DESCRIPTION

The SP2524 series are highly precise, low noise, positive voltage LDO regulators manufactured using CMOS processes. The series achieves high ripple rejection and low dropout and consists of a standard voltage source, an error correction, current limiter and a phase compensation circuit plus a driver transistor. The series is also compatible with low ESR ceramic capacitors which give added output stability.

This stability can be maintained even during load fluctuations due to the excellent transient response of the series. The current limiter's feedback circuit also operates as a short protect for the output current limiter and the output pin. The CE function enables the output to be turned off, resulting in greatly reduced power consumption.

The SP2524 family is compatible with low ESR capacitors. The current limiter's feedback circuit also operates as a short protect for the output current limiter. The SOT-23-5L / SOT-353 packages are available for portable electronic equipment.

FEATURES

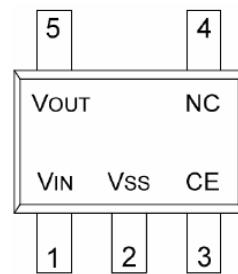

- ◆ Highly Accurate $\pm 2\%$
- ◆ Maximum operation voltage 7V.
- ◆ Dropout Voltage 200mV @ 150mA (3.3V type)
- ◆ High Ripple Rejection 45dB (10 KHz)
- ◆ Low Power Consumption 25 μ A (TYP.)
- ◆ Minimum Output Current 300mA
- ◆ Standby Current less than 0.1 μ A
- ◆ Internal protector current limiter and short protector
- ◆ Small packages SOT-23-5L / SOT-353 , and other required

APPLICATIONS

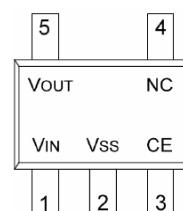

- Battery Power Equipment
- Cellular Phone
- Digital Cameras
- Computer Disk Drivers
- Portable games
- Communication tools
