N-CHANNEL ENHANCEMENT MODE**TERMINAL DIAGRAM****TERMINAL DESIGNATION****JEDEC TO - 204 AE**

The IRF150R, IRF151R, IRF152R and IRF153R are advanced power MOSFETs designed, tested, and guaranteed to withstand a specified level of energy in the breakdown avalanche mode of operation. These are n-channel enhancement-mode silicon-gate power field-effect transistors designed for applications such as switching regulators, switching converters, motor drivers, relay drivers, and drivers for high-power bipolar switching transistors requiring high speed and low gate-drive power. These types can be operated directly from integrated circuits.

The IRF-types are supplied in the JEDEC TO-204AE metal package.
