DATA SHEET

LA72715V — Monolithic Linear IC

LA72715VA — JPN MTS (Multi Channel Television Sound) Decoder IC

Overview

JPN MTS (Multi Channel Television Sound) Decoder IC

Features

- With SIF circuit, alignment-free* STEREO channel separation.
* In base band signal input mode, separation is adjusted by input level.
- Three I²C slave-addresses are prepared.
- The maximum output level is as large as 4.2dBV.
(Frequency = 1kHz, distortion = less than 3%, V_{CC} = 5V, TYP)
- The external clock is unnecessary.
- A couple of external input terminal is prepared.

Functions

- Stereo & Bilingual demodulation.
- Stereo & Bilingual detection.
- Just clock out.

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum power supply voltage	V _{CCH} max		7.0	V
Allowable power dissipation	Pd max	Ta ≤ 80°C, Mounted on a specified board*	203	mW
Operating temperature	Topr		-20 to +80	°C
Storage temperature	Tstg		-55 to +150	°C

* Mounted on a specified board: 114.3mm × 76.1mm × 1.6mm glass epoxy board

- Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment (home appliances, AV equipment, communication device, office equipment, industrial equipment etc.). The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for applications outside the standard applications of our customer who is considering such use and/or outside the scope of our intended standard applications, please consult with us prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.
- Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

Block Diagram and Application Circuit Example

SLAVE ADDRESS = 1000 000*B (16PIN : OPEN)
 SLAVE ADDRESS = 1000 010*B (16PIN : H)
 SLAVE ADDRESS = 1010 000*B (16PIN : L)

The value of (1*), (2*), and (3*) affects sensitivity for signal detection. It must be adjusted depending on the circumstances by the user.

(1*): Recommended constant value $0.0033\mu\text{F} + 470\text{k}\Omega$ (values when tested)

(2*): Recommended matching resistor value $R1=1\text{k}\Omega$, $R2=1\text{k}\Omega$

Recommended BPF Murata SFSRA4M50DF00-B0

(3*): Recommended constant value $4.7\mu\text{F}$ to $10\text{k}\Omega$

The ceramic capacitor may be used for the electrolytic capacitor.

LA72715V, 72715VA

Pin Functions

Pin No.	Pin Name	DC voltage AC level	Function	Equivalent Circuit
1	AM DETECTOR	DC : 2.3V	Reference terminal of AM detection.	
2 14	DC FILTER OUT	2pin DC : 2.6V 14pin DC : 2.1V	Absorbing the DC offset of signal line by external capacity.	
3 15	DC FILTER IN	DC : 2.4V	Absorbing the DC offset of signal line by external capacity.	
4	FM FILTER	DC : 2.9V	Filter terminal for making stable DC voltage of FM detection output in SIF part. Normally, use a condenser of 4.7μF. Increase the capacity value with concerning frequency characteristics of low level.	
5	SIF INPUT	DC : 2.4V	Input terminal for SIF. The input impedance is about 5kΩ. Be care for about pattern layout of the input circuit, because of causing buzz-beat and buzz by leaking noise signal into the input terminal. (The noise signal depending on sound is particularly video signal and chroma signal and so on. VIF carrier becomes noise signal.)	
6	GND

I²C BUS Serial Interface Specification

(1) Data Transfer Manual

This IC adopts control method (I²C-BUS) with serial data, and controlled by two terminals which called SCL (serial clock) and SDA (serial data). At first, set up^{*1} the condition of starting data transfer, and after that, input 8 bit data to SDA terminal with synchronized SCL terminal clock. The order of transferring is first, MSB (the Most Scale of Bit), and save the order. The 9th bit takes ACK (Acknowledge) period, during SCL terminal takes 'H', this IC pull down the SDA terminal. After transferred the necessary data, two terminals lead to set up and of^{*2} data transfer stop condition, thus the transfer comes to close.

*1 Defined by SCL rise down SDA during 'H' period.

*2 Defined by SCL rise up SDA during 'H' period.

(2) Transfer Data Format

After transfer start condition, transfers slave address (1000 000*) to SDA terminal, control data, then, stop condition (See figure 1).

Slave address is made up of 7bits, ^{*3}8th bit shows the direction of transferring data, if it is 'L' takes write mode (As this IC side, this is input operation mode), and in case of 'H' reading mode (As this IC side, this is output operation mode).

Data works with all of bit, transfer the stop condition before stop 8bit transfer, and to stop transfer, it will be canceled the transfer dates.

*3 It is called R/W bit.

LA72715V, 72715VA

Fig.1 DATA STRUCTURE “WRITE” mode

START Condition	Slave Address	R/W L	ACK	Control data	ACK	STOP condition
-----------------	---------------	----------	-----	--------------	-----	----------------

Fig.2 DATA STRUCTURE “READ” mode

START condition	Slave Address	R/W H	ACK	Internal Data *	ACK	STOP condition
-----------------	---------------	----------	-----	-----------------	-----	----------------

* Output data as follows ;

- bit8 is result of STERO DET (H : STEREO)
- bit7 is result of BILINGUAL DET (H : BILINGUAL)
- bit6 is Initial Condition ‘H’
- bit5 to bit1 are fixed to ‘L’

(3) Initialize

This IC is initialized for circuit protection. Initial condition is “01h (Main-mode)”.

Reference

Parameter	Symbol	min	max	unit
LOW level input voltage	V_{IL}	-0.5	1.5	V

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written consent of SANYO Semiconductor Co.,Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO Semiconductor Co.,Ltd. product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only; it is not guaranteed for volume production.
- Upon using the technical information or products described herein, neither warranty nor license shall be granted with regard to intellectual property rights or any other rights of SANYO Semiconductor Co.,Ltd. or any third party. SANYO Semiconductor Co.,Ltd. shall not be liable for any claim or suits with regard to a third party's intellectual property rights which has resulted from the use of the technical information and products mentioned above.

This catalog provides information as of November, 2008. Specifications and information herein are subject to change without notice.
