

STG4158

Low voltage 0.6 Ω typ single SPDT switch with break-before-make feature and 15 kV ESD protection

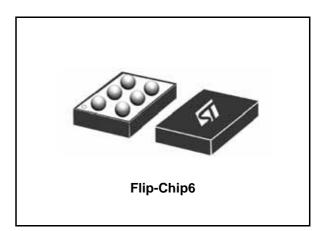

Features

- Power-off and over-voltage protection
- Wide operating voltage range: V_{CC} (opr) = 1.65 to 4.5 V
- Low ON resistance V_{IN} = 0 V:
 R_{ON} = 0.85 Ω (max) at V_{CC} = 4.5 V
- Latch-up performance exceeds 300 mA JESD 17
- ESD performance tested on (D pin)
 - 8 kV IEC-61000-4-2 ESD, contact discharge
 - 15 kV IEC-61000-4-2 ESD, air discharge
- ESD performance test on all other pins
 - 3 kV Human-Body-Model
 - 200 V machine model (IEC61340-3-2 level M2)
 - 1000 V charge-device model (JESD22 C101)

Description

The STG4158 is a high-speed CMOS low voltage single analog SPDT (single pole dual throw) switch or 2:1 multiplexer/ demultiplexer switch fabricated in silicon gate C²MOS technology. Designed to operate from 1.65 to 4.5 V, this device is ideal for portable applications.

It offers low ON resistance (0.6 Ω) at V_{CC} = 4.5 V (typical T_A = 25 °C). The SEL input threshold is compatible to 1.8 V, and provides control to the switches.

The switch S1 is ON (connected to common port D) when the SEL input is held high and OFF (high impedance state exists between the two ports) when SEL is held low. The switch S2 is ON (connected to common port D) when the SEL input is held low and OFF (high impedance state exists between the two ports) when SEL is held high.

The SEL input has an integrated weak pull-down resistor to prevent SEL signal from floating. For low power consumption, the SEL input must be grounded.

Power-off and over-voltage protection

The STG4158 features power-off and overvoltage protection, enabling the device to be isolated during voltage fault events.

2 Maximum rating

Stressing the device above the rating listed in the "absolute maximum ratings" table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

1. OFF-isolation = 20 log₁₀ (VD/VS), V_D = output, V_S = input to off switch

4 Application information

Power-off and over-voltage protection

The STG4158 has two operation modes:

- 1. Normal operation mode
- 2. Isolation mode

In the normal operation mode, the switch functions as a normal SPDT, with the SEL pin that selects the switch to be either ON or OFF. Either S1 or S2 is connected to common channel D.

In the isolation mode, all the switches are OFF. S1 or S2 are isolated from common channel D. The S1, S2, D ports have a 1 M Ω impedence to ground.

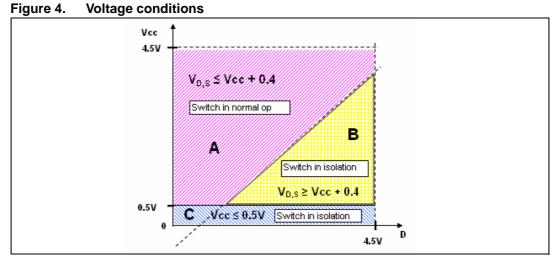

The operation modes are made possible by special detection circuitry that detects the voltage level at D, S1 and S2 supplies. Depending on these voltage levels, the device goes into isolation mode or normal operation mode accordingly.

The isolation mode is a feature of the device that is useful during fault conditions that occur in the application environment.

| V _{cc} | V _{D,S} (voltage at common port D, S1 or S2) | Voltage condition | Mode |
|-----------------------|---|--|-----------|
| Floating | 0 – 4.5 V | All switches OFF S1,S2 and D are isolated from each other | Isolation |
| 0 – 0.5 V | 0 – 4.5 V | All switches OFF S1, S2, D are isolated from each other | Isolation |
| V _{CC} > 0.5 | $V_{D,S} > V_{CC} + 0.4$ | All switches OFF S1,S2 and D are isolated from each other | Isolation |
| 1.65 – 4.5 V | 0 – V _{CC} | Either S1 or S2 is connected to D, depending on SEL input | Normal |

Table 9. Voltage conditions

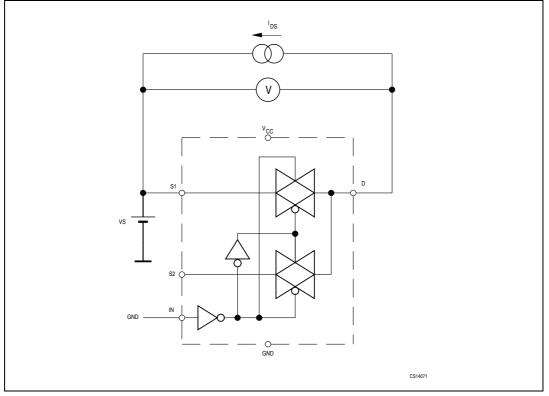

The SEL input has an integrated weak pull-down resistor $\mathsf{R}_{\mathsf{SEL}}$ to prevent SEL signal from floating. For lower power consumption, the SEL input must be grounded.

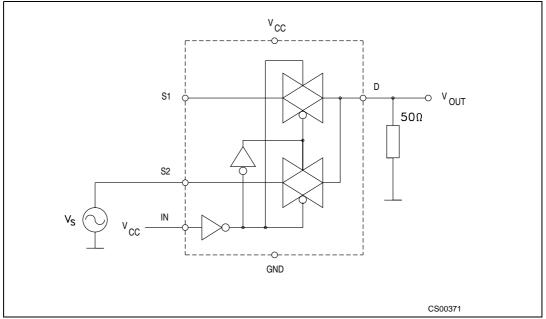

57

5 Test circuits

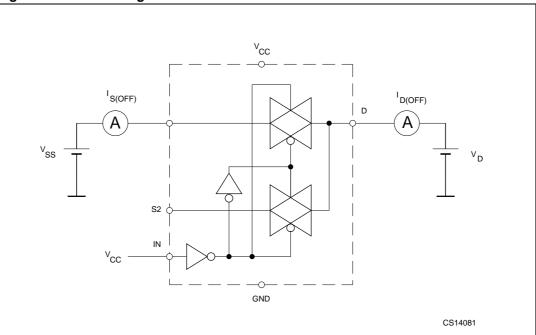

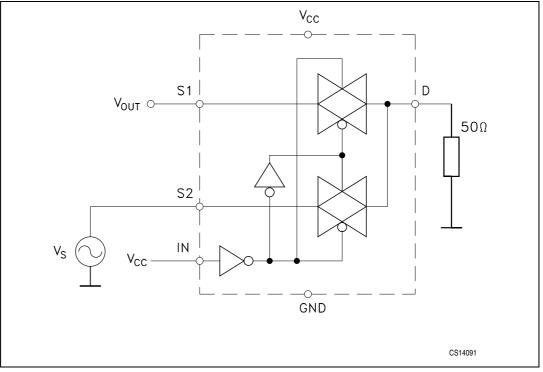

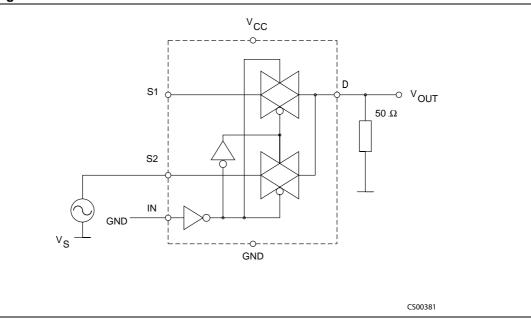

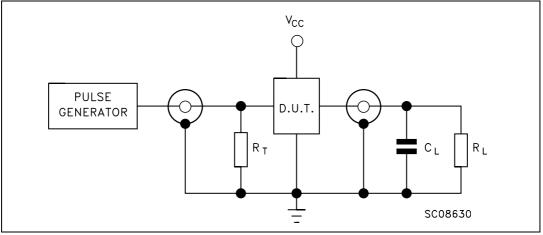

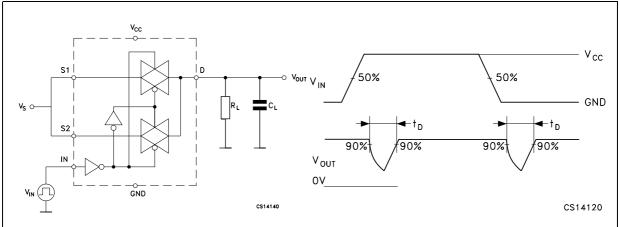

1. $C_L = 5/35 \text{ pF}$ or equivalent: (includes jig capacitance)

- 2. $R_L = 50 \Omega$ or equivalent
- 3. $R_T = Z_{OUT}$ of pulse generator (typically 50 Ω)

6 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK[®] packages. These packages have a Lead-free second level interconnect. The category of second Level Interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.

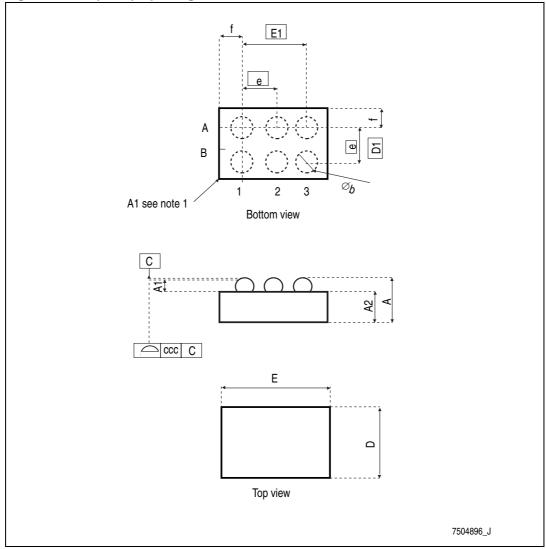

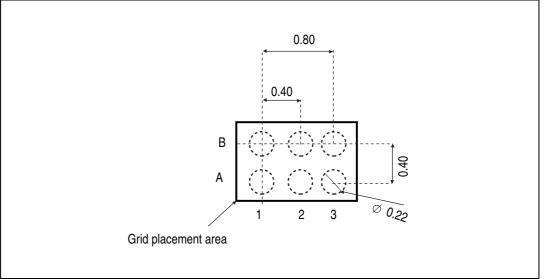

Figure 14. Flip-Chip6 package outline

- The terminal pin 1 on the bumps side is identified by a distinguishing feature (for instance by a circular "clear area" - typically 0.1mm diameter). The terminal pin 1 on the backside of the product is identified by a distinguishing feature (for instance by a circular "dot" - typically 0.5 mm diameter).
- 2. Drawing not to scale.
