

# 16-Channel (Two Banks of 8-Channel), High-Voltage Analog Switches

MAX14805/MAX14806

## General Description

The MAX14805/MAX14806 provide high-voltage switching on 16 channels for ultrasonic imaging. Both devices are ideal for the following applications: banks selection in biplane or triplane ultrasound probes and relays replacement. The devices utilize 200V process technology to provide sixteen high-voltage, low-charge injection SPST switches, controlled by a digital interface.

The MAX14805/MAX14806's output switches are configured as two sets of eight SPST analog switches. The switches are controlled by two input logic controls, DIN1 and DIN2 (respectively for switch 0 to 7 and switch 8 to 15). The MAX14806 features integrated 40k $\Omega$  bleed resistors on each switch terminal, which help to reduce voltage buildup in capacitive loads such as piezoelectric elements.

The MAX14805/MAX14806 operate with a wide range of high-voltage supplies, including  $V_{PP}/V_{NN} = +100V/-100V$ ,  $+200V/0V$ , and  $+40V/-160V$ . The digital interface operates from a separate  $V_{DD}$  supply from +2.7V to +5.5V. Digital inputs DIN1, DIN2, and  $\overline{LE}$  operate on the  $V_{DD}$  supply voltage.

The MAX14805CCM+ is a drop-in replacement for the Supertex HV2631. The MAX14806CCM+ is a drop-in replacement for the Supertex HV2731. Both devices are available in the 48-pin, TQFP package and are specified for the extended -40°C to +85°C temperature range.

## Features

- ◆ HVCMOS Technology for High Performance
- ◆ Two Sets of 8-Channel SPST High-Voltage Analog Switches
- ◆ DC to 20MHz Low-Voltage Analog Signal Frequency Range
- ◆ +2.7V to +5.5V Logic Supply Voltage
- ◆ Ultra-Low (0.1 $\mu$ A) (typ) Quiescent Current
- ◆ Low-Charge Injection, Low-Capacitance 20 $\Omega$  Switches
- ◆ -77dB (typ) Off-Isolation at 5MHz (50 $\Omega$ )
- ◆ Flexible, High-Voltage Supplies ( $V_{PP} - V_{NN} = 230V$ )

## Applications

Medical Ultrasound Imaging  
Nondestructive Test (NDT)

## Ordering Information/Selector Guide

PART	SWITCH CHANNELS	BLEED RESISTOR	SECOND SOURCE	PIN-PACKAGE
MAX14805CCM+	2 x 8	No	HV2631	48 TQFP
MAX14806CCM+	2 x 8	Yes	HV2731	48 TQFP

**Note:** All devices are specified over the extended -40°C to +85°C operating temperature range.  
+Denotes a lead(Pb)-free/RoHS-compliant package.

# 16-Channel (Two Banks of 8-Channel), High-Voltage Analog Switches

## ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND.)

VDD Logic Supply Voltage	-0.3V to +7V	Junction-to-Ambient Thermal Resistance	
VPP - VNN Supply Voltage	230V	$\theta_{JA}$ (Note 1)	44°C/W
VPP Positive Supply Voltage	-0.3V to +220V	Junction-to-Ambient Thermal Resistance	
VNN Negative Supply Voltage	+0.3V to -220V	$\theta_{JC}$ (Note 1)	10°C/W
Logic Inputs Voltage ( $\overline{LE}$ , DIN1, DIN2)	-0.3V to +7V	Operating Temperature Range	-40°C to +85°C
Analog Signal Range (SW_)	(-0.3V + VNN) to (VNN + 200V)	Storage Temperature Range	-65°C to +150°C
Peak Analog Signal Current per Channel	3A	Junction Temperature	+150°C
Continuous Power Dissipation (TA = +70°C)		Lead Temperature (soldering, 10s)	+300°C
48-Pin TQFP (derate 22.7mW/°C above +70°C)	1818mW	Soldering Temperature (reflow)	+260°C

**Note 1.** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maxim-ic.com/thermal-tutorial](http://www.maxim-ic.com/thermal-tutorial).

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

(VDD = +2.7V to +5.5V, VPP = +40V to (VNN + 200V), VNN = -40V to -160V, TA = TMIN to TMAX, unless otherwise noted. Typical values are at TA = +25°C.) (Note 2)

# 16-Channel (Two Banks of 8-Channel), High-Voltage Analog Switches

## Detailed Description

The MAX14805/MAX14806 provide high-voltage switching on 16 channels for ultrasonic imaging. Both devices are ideal for the following applications: bank selection in biplane or triplane ultrasound probes and relays replacement in medical ultrasound systems. The devices utilize 200V process technology to provide 16 high-voltage, low-charge injection SPST switches, controlled by a digital interface.

The MAX14805/MAX14806's output switches are configured as two sets of eight SPST analog switches. The switches are controlled by two input logic controls, DIN1 and DIN2 (respectively for switch 0 to 7 and switch 8 to 15). The MAX14806 features integrated 40k $\Omega$  bleed resistors on each switch terminal that help to reduce voltage buildup in capacitive loads such as piezoelectric elements.

The MAX14805/MAX14806 operate with a wide range of high-voltage supplies, including  $V_{PP}/V_{NN} = +100V/-100V$ ,  $+200V/0V$  and  $+40V/-160V$ . The digital interface operates from a separate  $V_{DD}$  supply from +2.7V to +5.5V. Digital inputs DIN1, DIN2, and  $\overline{LE}$  operate on the  $V_{DD}$  supply voltage.

The MAX14805CCM+ is a drop-in replacement for the Supertex HV2631. The MAX14806CCM+ is a drop-in replacement for the Supertex HV2731.

### Analog Switch

The MAX14805/MAX14806 allow a peak-to-peak analog signal range from  $V_{NN}$  to  $(V_{PP} - 10V)$ . During power-up and power-down, all analog switch inputs ( $SW_{\_}$ ) must be unconnected or satisfy  $V_{NN} \leq V_{SW_{\_}} \leq V_{PP}$ .

### High-Voltage Supplies

The MAX14805/MAX14806 allow a wide range of high-voltage supplies. The devices operate with  $V_{NN}$  from -160V to 0V and  $V_{PP}$  from +40V to  $(V_{NN} + 220V)$ . When  $V_{NN}$  is connected to GND (single-supply applications), the devices operate with  $V_{PP}$  up to +200V. The  $V_{PP}$  and  $V_{NN}$  high-voltage supplies are not required to be symmetrical, but the voltage difference ( $V_{PP} - V_{NN}$ ) must not exceed 230V.

### Bleed Resistors (MAX14806)

The MAX14806 features integrated 40k $\Omega$  bleed resistors to discharge capacitive loads such as piezoelectric transducers. Each analog switch terminal is connected to GND with a bleed resistor.

### Data Input (DIN1/DIN2)

DIN1/DIN2 control the on/off state of the analog switches. DIN1 controls SW0–SW7 and DIN2 controls SW8–SW15 (see Table 1 and Figure 2). DIN1 and DIN2 operate on the  $V_{DD}$  supply voltage.

### Latch Enable ( $\overline{LE}$ )

Drive  $\overline{LE}$  logic-low to latch DIN1/DIN2 data input (see Figure 2). Drive  $\overline{LE}$  logic-high to hold data. The  $\overline{LE}$  input operates on the  $V_{DD}$  supply voltage.

## Applications Information

For medical ultrasound applications, see Figures 3 and 4.

### Supply Sequencing and Bypassing

The MAX14805/MAX14806 do not require special sequencing of the  $V_{DD}$ ,  $V_{PP}$ , and  $V_{NN}$  supply voltages; however, analog switch inputs must be unconnected or satisfy  $V_{NN} \leq V_{SW_{\_}} \leq V_{PP}$  during power-up and power-down. Bypass  $V_{DD}$ ,  $V_{PP}$ , and  $V_{NN}$  to GND with a 0.1 $\mu$ F ceramic capacitor as close as possible to the device.
