

Radiation Hardened High Frequency Half Bridge Driver

The Radiation Hardened IS-2100ARH is a high frequency, 130V Half Bridge N-Channel MOSFET Driver IC, which is functionally similar to industry standard 2110 types. The low-side and high-side gate drivers are independently controlled. This gives the user maximum flexibility in dead-time selection and driver protocol.

In addition, the device has on-chip error detection and correction circuitry, which monitors the state of the high-side latch and compares it to the HIN signal. If they disagree, a set or reset pulse is generated to correct the high-side latch. This feature protects the high-side latch from single event upsets (SEUs).

Specifications for Rad Hard QML devices are controlled by the Defense Supply Center in Columbus (DSCC). The SMD numbers listed here must be used when ordering.

Detailed Electrical Specifications for the IS-2100ARH are contained in SMD 5962-99536. A "hotlink" is provided on our website for downloading.
