

## Cemented wirewound resistors

## AC01/03/04/05/07/10/15/20

## FEATURES

- High power dissipation in small volume
- High pulse load handling capabilities.

## APPLICATIONS

- Ballast switching
- Shunt in small electric motors
- Power supplies.

## DESCRIPTION

The resistor element is a resistive wire which is wound in a single layer on a ceramic rod. Metal caps are pressed over the ends of the rod. The ends of the resistance wire and the leads are connected to the caps by welding. Tinned copper-clad iron leads with poor heat conductivity are employed permitting the use of relatively short leads to obtain stable mounting without overheating the solder joint.

The resistor is coated with a green silicon cement which is not resistant to aggressive fluxes. The coating is non-flammable, will not drip even at high overloads and is resistant to most commonly used cleaning solvents, in accordance with "MIL-STD-202E" and "IEC 60068-2-45".

## QUICK REFERENCE DATA

DESCRIPTION	VALUE							
	AC01	AC03	AC04	AC05	AC07	AC10	AC15	AC20
Resistance range	0.1 Ω to 2 kΩ	0.1 Ω to 4.7 kΩ	0.1 Ω to 6.8 kΩ	0.1 Ω to 8.2 kΩ	0.1 Ω to 15 kΩ	0.68 Ω to 27 kΩ	0.82 Ω to 39 kΩ	1.2 Ω to 56 kΩ
Resistance tolerance	±5%; E24 series							
Maximum permissible body temperature	350 °C							
Rated dissipation at T <sub>amb</sub> = 40 °C	1 W	3 W	4 W	5 W	7 W	10 W	15 W	20 W
Rated dissipation at T <sub>amb</sub> = 70 °C	0.9 W	2.5 W	3.5 W	4.7 W	5.8 W	8.4 W	12.5 W	16 W
Climatic category (IEC 60068)	40/200/56							
Basic specification	IEC 60115-1							
Stability after:								
load, 1000 hours	ΔR/R max.: ±5% + 0.1 Ω							
climatic tests	ΔR/R max.: ±1% + 0.05 Ω							
short time overload	ΔR/R max.: ±2% + 0.1 Ω

**Notes**

1. Products with bent leads and loose in box, are available on request.
2. Last 3 digits available on request.

**Ordering code (12NC)**

- The resistors have a 12-digit ordering code starting with 23
- The subsequent 7 digits indicate the resistor type and packaging; see Table 1.
- The remaining 3 digits indicate the resistance value:
  - The first 2 digits indicate the resistance value.
  - The last digit indicates the resistance decade in accordance with Table 2.

**Table 2** Last digit of 12NC

RESISTANCE DECADE	LAST DIGIT
0.1 to 0.91 Ω	7
1 to 9.1 Ω	8
10 to 91 Ω	9
100 to 910 Ω	1
1 to 9.1 kΩ	2
10 to 56 kΩ	3

ORDERING EXAMPLE

The ordering code of an AC01 resistor, value 47 Ω, supplied in ammopack of 1000 units is: 2306 328 33479.

Product specifications deviating from the standard values are available on request.

# Cemented wirewound resistors

AC01/03/04/05/07/10/15/20

## FUNCTIONAL DESCRIPTION

### Product characterization

Standard values of nominal resistance are taken from the E24 series for resistors with a tolerance of  $\pm 5\%$ . The values of the E24 series are in accordance with "IEC publication 60063".

### Limiting values

TYPE	LIMITING VOLTAGE <sup>(1)</sup> (V)	LIMITING POWER (W)	
		T <sub>amb</sub> = 40 °C	T <sub>amb</sub> = 70 °C
AC01	$V = \sqrt{P_n \times R}$	1	0.9
AC03		3	2.5
AC04		4	3.5
AC05		5	4.7
AC07		7	5.8
AC10		10	8.4
AC15		15	12.5
AC20		20	16.0

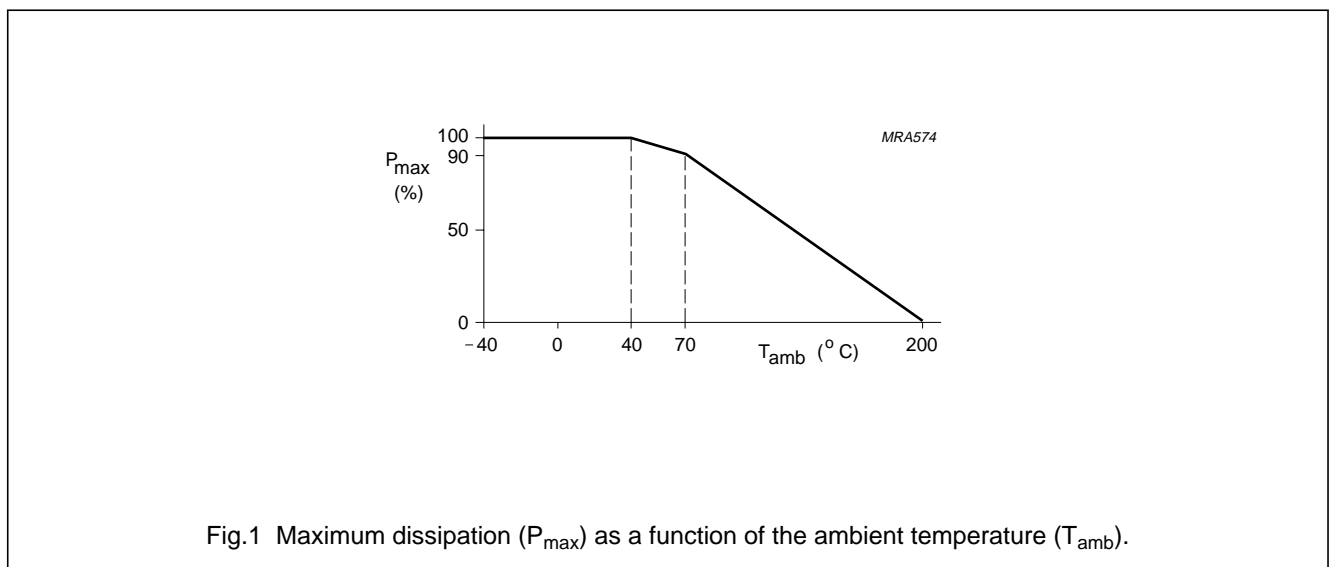

### Note

1. The maximum voltage that may be continuously applied to the resistor element, see "IEC publication 60266".

The maximum permissible hot-spot temperature is 350 °C.

### DERATING

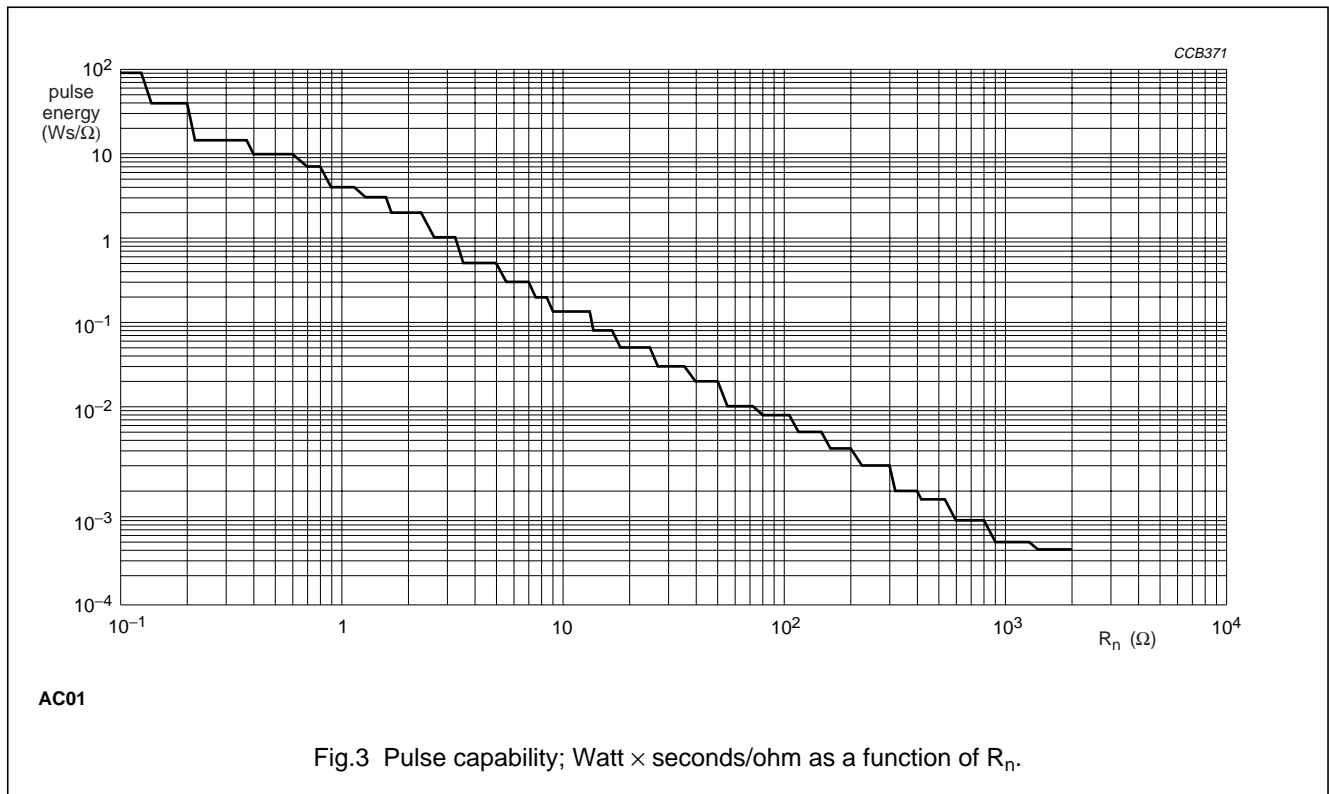

The power that the resistor can dissipate depends on the operating temperature; see Fig.1.

MOUNTING

The resistor is suitable for processing on cutting and bending machines. **Ensure that the temperature rise of the resistor body does not affect nearby components or materials by conducted or convected heat.** Figure 26 shows the hot-spot temperature rise of the resistor body as a function of dissipated power. Figures 27 to 34 show the lead length as a function of dissipated power and temperature rise.

Marking

The resistor is marked with the nominal resistance value, the tolerance on the resistance and the rated dissipation at  $T_{amb} = 40\text{ °C}$ .

For values up to 910 Ω, the R is used as the decimal point.

For values of 1 kΩ and upwards, the letter K is used as the decimal point for the kΩ indication.

## TESTS AND REQUIREMENTS

Essentially all tests are carried out in accordance with the schedule of "IEC publications 60115-1 and 60115-4", category 40/200/56 (rated temperature range -40 °C to +200 °C; damp heat, long term, 56 days). The testing also covers the requirements specified by EIA and EIAJ.

The tests are carried out in accordance with IEC publication 60068, "Recommended basic climatic and mechanical robustness testing procedure for electronic components" and under standard atmospheric conditions according to "IEC 60068-1", subclause 5.3.

Unless otherwise specified the following values apply:

Temperature: 15 °C to 35 °C

Relative humidity: 45% to 75%

Air pressure: 86 kPa to 106 kPa  
(860 mbar to 1060 mbar).

In Table 4 the tests and requirements are listed with reference to the relevant clauses of "IEC publications 60115-1, 115-4 and 68"; a short description of the test procedure is also given. In some instances deviations from the IEC recommendations were necessary for our method of specifying.

All soldering tests are performed with mildly activated flux.

**Table 4** Test procedures and requirements
