#### **Safety Instructions**

Integrated circuits on computer boards are sensitive to static electricity. To avoid damaging chips from electrostatic discharge, observe the following precautions:

- Do not remove boards or integrated circuits from their anti-static packaging until you are ready to install them.
- Before handling a board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. This helps to discharge any static electricity on your body.
- Wear a wrist-grounding strap, available from most electronic component stores, when handling boards and components. Fasten the ALLIGATOR clip of the strap to the end of the shielded wire lead from a grounded object. Please wear and connect the strap before handle the HS-6038 to ensure harmlessly discharge any static electricity through the strap.
- Please use an anti-static pad when putting down any components or parts or tools outside the computer. You may also use an anti-static bag instead of the pad. Please inquire from your local supplier for additional assistance in finding the necessary anti-static gadgets.
- **NOTE:** DO NOT TOUCH THE BOARD OR ANY OTHER SENSITIVE COMPONENTS WITHOUT ALL NECESSARY ANTI-STATIC PROTECTION.

# **Chapter 1**

1

## **General Description**

The HS-6038 is a 133MHz FSB Intel<sup>®</sup> 82815/82801BA chipset-based board designed for PICMG Bus Celeron<sup>™</sup>/Coppermine<sup>™</sup>/Tualatin<sup>™</sup> 800MHz~1.2GHz CPU compatibility. These features combine and make the HS-6038 an ideal all-in-one industrial single board computer. Additional features include an enhanced I/O with CompactFlash, VGA, dual LAN, audio, and two COM interfaces.

Its onboard ATA/33/66/100 to connected IDE drive interface architecture allows the HS-6038 to support data transfers of 33, 66 or 100MB/sec. for each IDE drive connection. Designed with the Intel<sup>®</sup> 82815/82801BA core logic chipset, the board supports all Celeron<sup>TM</sup>/Coppermine<sup>TM</sup>/Tualatin<sup>TM</sup> CPU series operating at 800MHz to 1.2GHz. The 82815 integrated CRT display controller supports up to 1280 x 1024 at 16 color resolution.

A single Flash chip holds the system BIOS, and you can change the Flash BIOS by the Utility Update. Advanced IrDA port also provides a faster data transmission. You can also use the DOS version of the "DiskOnChip<sup>TM</sup>" socket by issuing commands from the DOS prompt without the necessity of other software supports up to 288MB. System memory is also sufficient with the two DIMM sockets that can support up to 512MB.

Additional onboard connectors include an advanced USB and IrDA ports providing faster data transmission, and a dual RJ-45 connector for 10/100 Based Ethernet use.

To ensure the reliability in an unmanned or standalone system, the Watchdog Timer (WDT) onboard HS-6038 is designed with pure hardware that does not need the arithmetical functions of a real-time clock chip. If any program causes unexpected halts to the system, the onboard Watchdog Timer (WDT) will automatically reset the CPU or generate an interrupt to resolve such condition.

The HS-6038 also has a CompactFlash<sup>TM</sup> connector that accommodates standard of memory cards available in the market.

#### 1.1 Major Features

The HS-6038 comes with the following features:

- Socket 370 for Intel<sup>®</sup> Celeron<sup>™</sup>/Coppermine<sup>™</sup>/Tualatin<sup>™</sup> 800MHz ~1.2GHz CPU
- Supports 66/100/133MHz FSB
- Two DIMM sockets with a max. capacity of 512MB
- > Intel<sup>®</sup> 82815/82801BA system chipset
- Winbond W83627 super I/O chipset
- > Intel<sup>®</sup> 82815 CRT display controller
- Intel<sup>®</sup> 82559 and ICHII 10/100 Based LAN
- AC97 3D audio controller
- > Two COM, four USB connectors
- PC/104 Bus connector
- ▶ DiskOnChip<sup>TM</sup> socket supporting memory sizes of up to 288MB
- Supports Hardware Monitor
- ➤ Supports CompactFlash<sup>TM</sup> card reader (optional)

### 1.2 Specifications

- **CPU:** Socket 370 for Intel<sup>®</sup> Celeron<sup>™</sup>/Coppermine<sup>™</sup>/Tualatin<sup>™</sup> 800MHz ~1.2GHz CPU
- Bus Interface: PICMG Bus
- Memory: Two DIMM sockets supporting up to 512MB
- Chipset: Intel<sup>®</sup> 82815/82801BA
- I/O Chipset: Winbond W83627
- CompactFlash™: One, IDE interface adapter (optional)
- VGA: Intel<sup>®</sup> 82815 supporting CRT display up to 1280 x 1024 at 16 colors
- LAN: Intel<sup>®</sup> 82559 and Intel<sup>®</sup> ICHII 10/100 Based LAN
- Audio: AC97 3D audio controller
- IDE: Four IDE disk drives supporting ATA/33/66/100 and with transfer rates of up to 33/66/100MB/sec.
- FDD: Supports up to two floppy disk drives
- Parallel: One enhanced bi-directional parallel port supporting SPP/ECP/EPP
- Serial Port: 16C550 UART-compatible RS-232/422/485 x 1 and RS-232 x 1 serial ports with 16-byte FIFO
- PC/104: PC/104 connector for 8-bit ISA Bus
- IrDA: One TX/RX IrDA header
- USB: Four USB connectors
- Keyboard/Mouse: PS/2 6-pin Mini DIN
- DiskOnChip: DiskOnChip socket supporting memory sizes of up to 288MB
- BIOS: AMI PnP Flash BIOS
- Watchdog Timer: Software programmable time-out intervals from 1~256 sec.
- CMOS: Battery backup
- Power Consumption: +5V/7.5A (1GHz CPU), +12V/120mA
- **Operating Temperature:** 0~60°C
- Hardware Monitor: Winbond W83627
- Board Size: 33.8 x 12.1 cm

## 1.3 Board Dimensions

# **Chapter 2**

# Unpacking

#### 2.1 Opening the Delivery Package

The HS-6038 is packed in an anti-static bag. The board has components that are easily damaged by static electricity. Do not remove the anti-static wrapping until proper precautions have been taken. Safety Instructions in front of this manual describe anti-static precautions and procedures.

#### 2.2 Inspection

After unpacking the board, place it on a raised surface and carefully inspect the board for any damage that might have occurred during shipment. Ground the board and exercise extreme care to prevent damage to the board from static electricity.

Integrated circuits will sometimes come out of their sockets during shipment. Examine all integrated circuits, particularly the BIOS, processor, memory modules, ROM-Disk, and keyboard controller chip to ensure that they are firmly seated. The HS-6038 delivery package contains the following items:

- HS-6038 Industrial Single Board Computer
- ATA/100 IDE flat cable x 2
- FDD flat cable x 1
- Printer cable with bracket x 1
- KB/MS transfer cable x 1
- ♦ 8-pin USB split type cable with bracket x 1
- Speaker connector flat cable with bracket x 1
- Two RS-232 cable with bracket x 1
- 5-pin ATX cable x 1
- Jumper Bag
- Utility CD-ROM
- User's Manual

It is recommended that you keep all the parts of the delivery package intact and store them in a safe/dry place for any unforeseen event requiring the return shipment of the product. In case you discover any missing and/or damaged items from the list of items, please contact your dealer immediately.

# **Chapter 3**

# **Hardware Installation**

This chapter provides the information on how to install the hardware using the HS-6038. This chapter also contains information related to jumper settings of switch, watchdog timer, and the DiskOnChip<sup>™</sup> address selection etc.

### 3.1 Before Installation

After confirming your package contents, you are now ready to install your hardware. The following are important reminders and steps to take before you begin with your installation process.

- 1. Make sure that all jumper settings match their default settings and CMOS setup correctly. Refer to the sections on this chapter for the default settings of each jumper.
- 2. Go through the connections of all external devices and make sure that they are installed properly and configured correctly within the CMOS setup. Refer to the sections in this chapter for the detailed information on the connectors.
- 3. Keep the manual and diskette in good condition for future reference and use.

3.2

# 3.3 Jumper List

Jumper	Definition	Setting	Page
JP2	Host Bus Clock Rate Select: 133MHz FSB	Open	10
JP3	Clear CMOS: Normal Operation	Short 1-2	15
JP4	LAN2 Enabled/Disabled Select: Enabled	Short 1-2	14

USB1	External USB Connector	15
USB2/USB3	Internal USB Connectors	15
RT1/RT2	Power Sensing Connectors	18
VGA1	15-pin VGA Connector	10

### 3.5 Configuring the CPU

JP2 is used to set the Host Bus Clock Rate. The setting of internal Host Bus Clock Rate is for defining the operating clock base rate of the internal bus of core logic.

• JP2: Host Bus Clock Rate Select

Description	Setting	1
66/100MHz FSB	Short	
133MHz FSB (default)	Open	
	орен	чC

### 3.6 System Memory

The HS-6038 provides two 168-pin DIMM sockets at locations *DIM1* and *DIM2*. The maximum capacity of the onboard memory is 512MB.

### 3.7 VGA Controller

The HS-6038 provides one connection for VGA device. *VGA1* offers a single standard 15-pin CRT connector.

#### • VGA1: 15-pin CRT Connector

PIN	Description	PIN	Description	
1	Red	2	Green	6
3	Blue	4	VCC	
5	GND	6	GND	
7	GND	8	GND	
9	VCC	10	GND	
11	VCC	12	DDCDA	501001
13	HSYNC	14	VSYNC	
15	DDCCL			

An Inter-IC connector *CN9*, also offers the flexibility of installing an  $I^2C$  digital signal-based device.

#### • CN9: I<sup>2</sup>C Bus Connector

PIN	Description	1 2 3
1	SMBDATA	
2	SMBCLK	🗖 🔿 🔿
3	GND	

### **3.8 IDE Drive Connector**

*IDE1/IDE2* are standard 40-pin connector daisy-chain driver connectors serving the PCI E-IDE drive provisions onboard the HS-6038. A maximum of four IDE drives can be connected to the HS-6038 via *IDE1/IDE2*.

PIN	Description	PIN	Description

23	GND	24	GND
25	GND	26	GND

### 3.12 Ethernet Connector

The HS-6038 provides one dual RJ-45 10/100 Based LAN interface connectors. Please refer to the following table for their identical pin assignments.

• LAN1: Dual RJ-45 Connector

#### • JP4: LAN2 Enable/Disable Select

Options	Settings	1	2	3
Enabled (default)	Short 1-2			
Disabled	Short 2-3		<u> </u>	

#### 3.13 IrDA Connector

*IR1* is a 5-pin internal IR communication connector for connection of an IrDA device.

#### • IR1: IrDA Connector

PIN	Description	
1	VCC	1 2 3 4 5
2	N/C	
3	IRRX	
4	GND	
5	IRTX	

### 3.14 USB Connector

The HS-6038 provides one 4-pin external USB connector at location USB1, and two 8-pin connectors at locations USB2 and USB3.

#### • USB1: External USB Connector

PIN	Description	Ι.		
1	VCC	1		C
2	BD0-		0	4

### 3.15 CMOS Data Clear

The HS-6038 has a Clear CMOS jumper on JP3.

#### • JP3: Clear CMOS

Options	Settings	
Normal Operation (default)	Short 1-2	
Clear CMOS	Short 2-3	
		0

**NOTE:** The default setting of JP3 is Short 1-2 in storage. Before you turn on the power of your system, please set JP3 to Short 1-2 for normal operation.

### 3.16 Power and Fan Connectors

The HS-6038 provides one 5-pin ATX Power On connector at *CN10*, one 2-pin ATX Power ON switch at *CN6*, and a single 3-pin FAN out connector at *CN8*.

#### • CN10: 5-pin ATX Power In Connector

PIN	Description		-

9	+5Vsb	19	+5V	+12V	lõ	õ	+5V
10	+12V	20	+5V		10	20	

If the system is not using the ATX power function, you may SHORT pins 4 and 5 of *CN10* so that the ATX power supply can be used as an AT power unit. If not, *CN2* must be connected to a corresponding connector on a PICMG Bus backplane in order to use the ATX Power function.

When using the ATX Power, *CN6* is used to turn on the power. In this case, a BOSER PICMG Bus backplane must complement the HS-6038 for proper operation.

• CN6: 2-pin ATX Power On Switch

PIN	Description	1 2
1	5VSBY	
2	PANSWIN	

CN8 onboard HS-6038 is a 3-pin fan power output connector.

• CN8: Fan Power In Connector

### 3.17 Keyboard/Mouse Connectors

The HS-6038 offers two possibilities for keyboard connection. The connections are via *KB1* for an external PS/2 type keyboard/mouse or via *CN3* for an internal 5-pin cable converter to an AT keyboard.

#### • CN3: 5-pin Keyboard Connector

PIN	Description						
1	Keyboard Clock	I	1	2	3	4	5
2	Keyboard Data	IK.	_				
3	N/C	1Y	-	U	U	U	U
4	GND	1-					
5	+5V	]					

#### • KB1: PS/2 6-pin Mini DIN Keyboard/Mouse Connector

PIN	Description	
1	Keyboard Data	Keyboard Clock O 3 GND
2	Mouse Data	5 1 Keyboard
3	GND	
4	+5V	6
5	Keyboard Clock	Mouse Clock O O 4 +5V
6	Mouse Clock	

### 3.18 System Front Panel Connectors

The HS-6038 has one LED at location D1 that indicates the power-on status. This visual feature of the IDE LED may also be connected to an external IDE LED via connector CN4.

• CN4: IDE LED Connector

CN1 and CN7 are the Keylock and Reset Button connectors onboard.

• CN1: Keylock Connector

PIN	Description					
1	VCC					
2	N/C	1	2	3	4	5
3	GND			Ô		
4	Keylock		0	0	0	U
5	GND					

• CN7: 2-pin Reset Button Connector

PIN	Description	12
1	GND	
2	H/W Reset	

### 3.19 External Speaker

Aside from the buzzer at location BZ1 onboard, the HS-6038 also offers a connector (CN2) for an external speaker connection. The table below lists the pin assignments of CN2.

• CN2: Speaker Connector

PIN	Description	
1	Speaker Signal	1 2 3 4
2	GND	
3	GND	
4	+5V	

### 3.20 Thermal Input Connectors

In relevance to the Hardware Monitoring feature provided by the onboard Winbond W83627, the board allows the installation of a thermal sensor via connectors RT1/RT2 and JP1. The thermal connector JP1 monitors and displays the current system temperature whereas RT2 monitors the temperature conditions along the area where the power supply system sits. The displayed values are read-only figures and may not be altered.

• RT1, RT2, JP1: System/Power Sensing Connectors

PIN	Description	
1	Sensing	
2	GND	2

### 3.21 Audio Connectors

The HS-6038 has an onboard AC97 3D audio interface. The following tables list the pin assignments of the CD-ROM Analog Input, the Line In and the MIC In/Audio Out connectors.

• CD1: CD-ROM Analog Input Connector

PIN	Description	0	0	
1	CD IN_R	2	3	4
2	CD REF	10	Ο	0
3	CD REF			
4	CD IN_L			

• CD2: Line In Connector

• JP13: MIC In/Audio Out Connector

<b>PIN</b>	Description	PIN	Description			
1	OUT_L	2	OUT_R			1
3	GND	4	GND	2	0000	l
5	MIC IN	6	N/C	1		
7	GND	8	GND			

### 3.22 SMI Signal Input Switch

The HS-6038 has an SMI connector at location *CN5*. If there is an external SMI Signal Input Switch, this input switch will be able to receive signals.

• CN5: SMI Signal Input Switch

PIN	Description	1 2
1	GND	
2	EXTSMI	<b></b>

### 3.23 Watchdog Timer

Once the Enable cycle is active, a Refresh cycle is requested before the time-out period. This restarts counting of the WDT period. When the time counting goes over the period preset of WDT, it will assume that the program operation is abnormal. A System Reset signal is to re-start when such error happens.

• JP5: WDT Active Type Setting

Options	Settings	1	2	3
Active NMI	Short 1-2		0	0
System Reset (default)	Short 2-3		<u> </u>	U
Disabled Watchdog Timer	Open			

The following sample programs show how to Enable, Disable and Refresh the Watchdog Timer:

; Enter the WDT function mode, interruptible double-writ

MOV	AL, AAH
OUT	DX, AL

\* User can also use AL, 00H's defined time for reset purposes, e.g.00H for Disable, 01H = 1sec, 02H = 2sec....FFH = 255sec

#### 3.24 CompactFlash™ Connector

The HS-6038 also offers an optional CompactFlash<sup>TM</sup> connector which is IDE interface located at the solder side of the board. The designated *IDE2* connector, once soldered with an adapter, can hold CompactFlash<sup>TM</sup> cards of various sizes. Please turn off the power before inserting the CF card. Inserting a CompactFlash<sup>TM</sup> card into the adapter is not a difficult task. The socket and card are both keyed and there is only one direction for the card to be completely inserted. Refer to the diagram below for the traditional way of inserting the card.

PIN	Description	PIN	Description
1	GND	2	DATA 3
3	DATA 4	4	DATA 5

#### • **CF1:** CompactFlash<sup>TM</sup> Connector

Inserting a CompactFlash<sup>™</sup> card into the adapter is not a difficult task. The socket and card are both keyed and there is only one direction for the card to be completely inserted. Refer to the diagram on the following page for the traditional way of inserting the card.

### 3.25 PC/104 Connectors

The PC/104 expansion bus offers provisions to connect all types of PC/104 modules. With the PC/104 bus being known as the new generation of industrial embedded 16bit PC standard bus, thousands of PC/104 modules from multiple venders can be easily installed onboard. The detailed pin assignment of the PC/104 expansion bus connectors *PC1* and *PC2* are listed in the following tables:

**NOTE :** The PC/104 connector allows direct plugging or stack-through piling of PC/104 modules without requiring the PC/104 mounting kit.

### 3.26 DiskOnChip<sup>™</sup> Address Setting

The DiskOnChip<sup>™</sup> function allows the system to boot or operate without a FDD or a HDD. DiskOnChip<sup>™</sup> modules may be formatted as drive C. With DiskOnChip<sup>™</sup>, user may also execute DOS commands such as FORMAT, SYS, COPY, XCOPY, DISCOPY, DISKCOMP, etc.

The *U31* location onboard the HS-6038 is the DiskOnChip<sup>™</sup> module socket. If you have another memory device that has a similar memory capacity with that of the DOC in your system, please set both at different memory address mapping to avoid mapping area conflicts. Failing to do so will not make the HS-6038 and the additional memory device function properly. *JP6/JP7* selects the starting memory address of the DiskOnChip<sup>™</sup> (D.O.C.) to avoid the mapping area with any other memory devices.

			_				
Address	JP6	JP7	2	4	6	2	4
0C800H~0C9FFH	Short 1-2	Short 1-2					
0CC00H~0CDFFH	Short 1-2	Short 3-4		U	O		
0D000H~0D1FFH (default)	Short 3-4	Short 1-2		0	0		0
0D400H~0D5FFH	Short 3-4	Short 3-4			-		-
0D800H~0D9FFH	Short 5-6	Short 1-2	1	3	5	1	3
0DC00H~0DDFFH	Short 5-6	Short 3-4		JP6		J	P7

#### ● JP6 and JP7: DiskOnChip<sup>™</sup> Address Select

#### 3.26.1 Installing DiskOnChip<sup>™</sup> Modules

When installing a DiskOnChip<sup>™</sup> module onto your board, please take note of the following:

- Orient yourself properly with the location of the DiskOnChip<sup>™</sup> socket. Try to locate the pin 1 location on your socket. Pin numbers are usually printed on either the component side or the solder side of your board.
- Locate the Pin 1 location on your DiskOnChip<sup>™</sup> module. More often than not, Pin 1 can be found on the lower right corner of the chip. Please refer to the diagram for the exact location.
- 3. Once you have figured out where the pin 1 locations are (on both chip and socket), align the module's pins on an upright angle against the socket. Using both thumbs, gently press the module into the socket until all the pins are secured to their designations.

- 4. The installation is now complete and your module is now ready for use.
- **NOTE:** If you encounter difficulty installing your DiskOnChip<sup>™</sup> module, please consult a qualified technician or engineer to perform the installation.

#### 3.26.2 Removing DiskOnChip™ Modules

When removing a DiskOnChip<sup>™</sup> module from its socket, please take note of the following:

- 1. Loosen the contact of the module from its socket using a screwdriver.
- Insert the screwdriver's flat head into a gap on either end of the socket. Do not insert the screwdriver head on either side where the pins are located. Doing so might damage the pins in the process.
- 3. Slowly lift the screwdriver handle upwards. This will disengage the module from its socket.
- **NOTE:** If you encounter difficulty removing your DiskOnChip<sup>™</sup> module, please consult a qualified technician or engineer to remove it for you.

# **Chapter 4**

# **AMI BIOS Setup**

The HS-6038 uses AMI BIOS for the system configuration. The AMI BIOS setup program is designed to provide the maximum flexibility in configuring the system by offering various options that could be selected for end-user requirements. This chapter is written to assist you in the proper usage of these features.

### 4.1 Starting Setup

The AMI BIOS is immediately activated when you first power on the computer. The BIOS reads the system information contained in the CMOS and begins the process of checking out the system and configuring it. When it finishes, the BIOS will seek an operating system on one of the disks and then launch and turn control over to the operating system.

While the BIOS is in control, the Setup program can be activated in one of two ways:

- 1. By pressing <Del> immediately after switching the system on, or
- 2. By pressing the <Del> key when the following message appears briefly at the bottom of the screen during the POST (Power On Self Test).

#### Press DEL to enter SETUP.

If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF, then ON or pressing the "RESET" button on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt>, and <Delete> keys. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to...

#### PRESS F1 TO CONTINUE, DEL TO ENTER SETUP

### 4.2 Using Setup

In general, you use the arrow keys to highlight items, press <Enter> to select, use the <PageUp> and <PageDown> keys to change entries, press <F1> for help and press <Esc> to quit. The following table provides more details about how to navigate in the Setup program using the keyboard.

Up arrow	Move to previous item		
Down arrow Move to next item			
Left arrow	Move to the item in the left hand		
Right arrow	Move to the item in the right hand		
Esc key	Main Menu Quit and not save changes into CMOS		
-	Status Page Setup Menu and Option Page Setup Menu -		
	Exit current page and return to Main Menu		
PgUp key	Increase the numeric value or make changes		
PgDn key	Decrease the numeric value or make changes		
+ key	Increase the numeric value or make changes		
- key	Decrease the numeric value or make changes		
F1 key	General help, only for Status Page Setup Menu and Option		
	Page Setup Menu		
(Shift)F2 key	Change color from total 16 colors. F2 to select color		
	forward, (Shift) F2 to select color backward		
F3 key	Calendar, only for Status Page Setup Menu		
F4 key	Reserved		
F5 key	Restore the previous CMOS value from CMOS, only for		
	Option Page Setup Menu		
F6 key	Load the default CMOS value from BIOS default table, only		
	for Option Page Setup Menu		
F7 key	Load the default		
F8 key	Reserved		
F9 key	Reserved		
F10 key	Save all the CMOS changes, only for Main Menu		

#### 4.2.1 Getting Help

Press F1 to pop up a small help window that describes the appropriate keys to use and the possible selections for the highlighted item. To exit the Help Window press <Esc> or the F1 key again.

#### 4.3 Main Menu

Once you enter the AMI BIOS CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions and two exit choices. Use the arrow keys to select among the items and press <Enter> to enter the sub-menu.

**NOTE:** A brief description of the highlighted choice appears at the bottom of the screen.

### 4.4 Standard CMOS Setup

The Standard Setup is used for the basic hardware system configuration. The main function is for Data/Time and Floppy/Hard Disk Drive settings. Please refer to the following screen for the setup. When the IDE hard disk drive you are using is larger than 528MB, you must set the HDD mode to **LBA** mode. Please use the IDE Setup Utility in BIOS SETUP to install the HDD correctly.

## 4.6 Advanced Chipset Setup

This section allows you to configure the system based on the specific features of the installed chipset. This chipset manages bus speeds and the access to the system memory resources, such as DRAM and the external cache. It also coordinates the communications between the conventional ISA and PCI buses. It must be stated that these items should never be altered. The default settings have been chosen because they provide the best operating conditions for your system. You might consider and make any changes only if you discover that the data has been lost while using your system.

AMIBIOS SETUP – ADVANCED CHIPSET SETUP (C)2001 American Megatrends, Inc. All Rights Reserved

## 4.8 PCI / Plug and Play Setup

This section describes configuring the PCI bus system. PCI, or Personal Computer Interconnect, is a system that allows I/O devices to operate at speeds nearing the speed the CPU itself uses when communicating with its own special components. This section covers some very technical items and it is strongly recommended that only experienced users should make any changes to the default settings.

## 4.9 Peripheral Setup

The IDE hard drive controllers can support up to two separate hard drives. These drives have a master/slave relationship that is determined by the cabling configuration used to attach them to the controller. Your system supports two IDE controllers--a primary and a secondary--so you can install up to four separate hard disks.

PIO means Programmed Input/Output. Rather than having the BIOS issue a series of commands to affect the transfer to or from the disk drive, PIO allows the BIOS to tell the controller what it wants and then let the controller and the CPU perform the complete task by them. This is much simpler and more efficient (also faster).

## 4.11 Auto-Detect Hard Disks

This option detects the parameters of an IDE hard disk drive, and automatically enters them into the Standard CMOS Setup screen.

Up to four IDE drives can be detected, with parameters for each appearing in sequence inside a box. To accept the displayed entries, press the "Y" key; to skip to the next drive, press the "N" key. If you accept the values, the parameters will appear listed beside the drive letter on the screen.

## 4.12 Change Supervisor/User Password

You can set either supervisor or user password, or both of then. The differences between are:

- **supervisor password:** can enter and change the options of the setup menus.
- **user password:** just can only enter but do not have the right to change the options of the setup menus.

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

#### ENTER PASSWORD:

Type the password, up to eight characters in length, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable a password, just press <Enter> when you are prompted to enter the password. A message will confirm the password will be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

#### PASSWORD DISABLED.

When a password has been enabled, you will be prompted to enter it every time you try to enter Setup. This prevents an unauthorized person from changing any part of your system configuration.

Additionally, when a password is enabled, you can also require the BIOS to request a password every time your system is rebooted. This would prevent unauthorized use of your computer.

You determine when the password is required within the BIOS Features Setup Menu and its Security option (see Section 3). If the Security option is set to "System", the password will be required both at boot and at entry to Setup. If set to "Setup", prompting only occurs when trying to enter Setup.

# 4.13 Auto Configuration with Optimal Settings

When you press <Enter> on this item you will get a confirmation dialog box with a message shown below. This option allows you to load/restore the BIOS default values permanently stored in the BIOS ROM. Pressing 'Y' loads the BIOS default values for the most stable, minimal-performance system operations.

AMIBIOS HIFLEX SETUP UTILITY – VERSION 1.52 (C)2001 American Megatrends, Inc. All Rights Reserved	
HS-6038LV VER:1.1.	
Standard CMOS Setup Advanced CMOS Setup Advanced Chipset Setup Power Management Setup	
Load high performance settings (Y/N) ? <u>N</u>	
Change Supervisor Password Auto Configuration with Optimal Settings Optimal Configuration with Fail Safe Settings Save Settings and Exit Exit Without Saving	
Standard CMOS setup for changing time, date, hard disk type, etc. ESC:Exit ↑↓:Sel F2/F3: Color F10: Save & Exit	

## 4.14 Optimal Configuration with Fail Safe Settings

When you press <Enter> on this item you get a confirmation dialog box with a message similar to the figure below. This option allows you to load/restore the default values to your system configuration, optimizing and enabling all high performance features. Pressing 'Y' loads the default values that are factory settings for optimal performance system operations.

## 4.15 Save Settings and Exit

Pressing <Enter> on this item asks for confirmation:

AMIBIOS HIFLEX SETUP UTILITY – VERSION 1.52 (C)2001 American Megatrends, Inc. All Rights Reserved
HS-6038LV VER:1.1.
Standard CMOS Setup Advanced CMOS Setup Advanced Chipset Setup Power Management Setup
Save current settings and exit (Y/N) ? <u>Y</u>
Change Supervisor Password Auto Configuration with Optimal Settings Optimal Configuration with Fail Safe Settings Save Settings and Exit Exit Without Saving
Standard CMOS setup for changing time, date, hard disk type, etc. ESC:Exit ↑↓:Sel F2/F3: Color F10: Save & Exit

Pressing "Y" stores the selections made in the menus in CMOS – a special section of memory that stays on after you turn your system off. The next time you boot your computer, the BIOS configures your system according to the Setup selections stored in CMOS. After saving the values, the system will restart.

## 4.16 Exit Without Saving

Pressing <Enter> on this item asks for confirmation:

### Quit without saving (Y/N)?

This allows you to exit Setup without storing and having any change in CMOS. The previous selections remain in effect. This exits the Setup utility and restarts your computer.

# **Chapter 5**

# **Software Utilities**

This chapter contains the detailed information of IDE, VGA, LAN and Audio driver installation procedures. The utility disk that came with the delivery package contains an auto-run program that invokes the installation programs for the IDE, VGA, LAN and Audio drivers. The following sections describe the installation procedures of each driver based on Win 95/98, Win 2000 and Win NT operating systems. It is recommended that you install the drivers matching the sections listed in this chapter.

## 5.1 IDE Driver Installation

### 5.1.1 Installing Intel 815 Chipset Software

1. Insert Utility CD Disk into your CD ROM drive. The main menu will pop up as shown below. Select on the **IDE** button to launch the installation program.

2. Click on the **INTEL\_ICH2** button to continue.

3. When the **IDE \ INTEL\_ICH2** box appears on your screen, click on the **INTEL\_R&HIPSET\_SOFTWARE\_INS** to install the IDE plug and play information files into your system.

 Immediately after clicking the IDE button in Step 1, the program launches the InstallShield Wizard that will assist you in the installation process. Click on the <u>Next</u> > button to proceed.

5. The Intel OEM Software License Agreement dialog box then appears on the screen. Choose  $\underline{\textbf{Yes}}$  to proceed.

6. When the Readme Information dialog box pops up, just click on the  $\underline{\textbf{Next}}$  button to proceed.

Readme Information		
Readme.bit		(38)

### 5.1.2 Installing Intel Security Driver

 Following Steps 1 ~ 3 of the Intel 815 chipset software (from the preceding section), click on the INTEL\_SECURITY\_ DRIVER button. When the dialog box below appears, make sure you close all other Windows applications then click on the <u>Next</u> > button to proceed.

2. The Intel OEM Software License Agreement dialog box then appears on the screen. Choose **Yes** to proceed.

 When the **Release Notes** box pops up on the screen, read through any important information listed before clicking the <u>Next</u> > button.

Intel Security Driver	
Varsti Release Notes	×
Belease Notes for DEMs. bit	
< Back Next> Car	icel

 Setup will then prompt you to specify the path where you would like the Security driver installed. Select the <u>Next</u> > button after you have made your path/installation choice.

ersi	se Destination Loc	cation 🔀
		Setup will install Intel Security Driver in the following folder.
		To install to this folder, click Next.
	-	To install to a different folder, click Browse and select another folder.
		You can choose not to install Intel Security Driver by clicking. Concel to exit Setup.
		Destination Folder
		C:\Vintel\Intel Security Driver Browse
		<back next=""> Cancel</back>

1X

 Once the setup program finishes copying files into your system, it will prompt you to restart the computer. Tick on the Yes, I want to restart my computer now followed by a click on the <u>Finish</u> button to reboot. Only after your computer boots will the new settings take effect.

## 5.2 VGA Driver Installation

### 5.2.1 Win 95/98

1. After loading the Utility CD-ROM, the program automatically runs the utility. Press **Enter** to proceed installing. When the main utilities window pops up on the screen, select the **VGA** button.

2. When the VGA main utility window is displayed. Select **INTEL\_815** to continue.

3. The INTEL\_815 window shows up next. Select **WIN9X** to invoke the corresponding installation program.

 The program launches an introduction screen of what graphics driver it will install. Close all other running Windows applications then click on the **Next** > button to proceed.

 Immediately after clicking on the Next > button, the Intel OEM Software License Agreement pops up on the screen. Choose <u>Yes</u> to proceed.

Softw	Software License Agreement
3ejjun	Please read the following License Agreement. Press the PAGE DDWN key to see the rest of the agreement.
	INTEL SOFTWARE LICENSE AGREEMENT (DEM / INV / ISV Dubbukon & Single Ure) Ure) Dubbukon & Single

		Before you can use the program, you must restart Windows or your computer.	
		C No, I want to restart my computer now	
-	29	Remove any disks from their drives, and then click Finish to complete setup.	
		< Back Finish	

## 5.2.2 Win 2000

1. Follow steps 1 and 2 from the Win9x installation procedure. When the INTEL\_815 window shows up, select WIN2K to invoke the installation program to your Win 2000 OS.

 The program launches the InstallShield Wizard for Intel 810/810E/815/815E/815EM chipset graphics. Close all other running Windows applications then click on the Next > button.

 Immediately after clicking the Next > button, the Intel OEM Software License Agreement pops up on the screen. Choose <u>Yes</u>.

4. Once the utility program finishes copying and installing all the necessary files into your system, it will prompt you to restart your computer. Tick on the **Yes, I want to restart my computer now** followed by a click on the **Finish** button to complete the installation.

### 5.2.3 Win NT4.0

No.17

- 1. Follow steps 1 and 2 from the Win9x installation procedure. When the INTEL\_815 window shows up, select **NT40** to invoke the installation program to your Win 2000 OS.
- 2. The program launches an introduction screen of the graphics it will install. Close all other running Windows applications and then click on the **Next >** button to proceed.

 Immediately after clicking on the Next > button, the Intel OEM Software License Agreement pops on the screen. Choose <u>Yes</u>.

 Once the utility program finishes copying and installing all the necessary files into your system, it will prompt you to restart your computer. Tick on the Yes, I want to restart my computer now followed by a click on the Finish button to complete the installation.

## 5.3 LAN Driver Installation

### 5.3.1 Win 95/98

1. Right click on **My Computer** icon then scroll to the **Properties** item from the pop-up menu.

2. Select **Device Manager** from the top menu bar. A list of all devices installed appears, scroll down to the **Other devices** and then select on **PCI Ethernet Controller**. Select the Properties button to access the details of this *unknown* device. Refer to the following screen shot for a clearer explanation of this step.

3. Once the **PCI Ethernet Controller Properties** screen pops up on the screen, click on the **Update Driver** ... button to launch the **Update Device Driver Wizard** screen.

## 5.4 Audio Driver Installation

## 5.4.1 Win 95/98

1. After loading the Utility CD-ROM, the program automatically runs the utility. Press **Enter** to proceed installing. When the main utilities window pops up on the screen, select **SOUND&AC7**.

 The succeeding screen will then show you the SOUND&AC97 main menu. Select on ALC 100 to continue installation. When the ALC100 dialog box appears, pick on WIN98\_ME and it will take you to the ALC 100 menu. Refer to the following screen shots for a graphical description of this step.

3. Select the language you intend to use for the installation. The default is **English**. After making your choice, press on the **OK** button to proceed.

4. Once the InstallShield Wizard completes the operation and update of your AC'97 driver, it will ask you to remove disks from their drives, and prompt you to restart your system. Tick on the Yes, I want to restart my computer now. Afterwards, click on the **<u>F</u>inish** button to complete the installation process. The system changes you made will take effect after the system restarts.

75

## 5.4.2 Win 2000

- 1. Following steps 1 and 2 of the Win95/98 AC97 installation, select **WIN2K** button when the ALC100 dialog box appears on the screen.
- Select the language you intend to use for the installation. The default is **English**. After making your choice, press on the <u>OK</u> button to proceed.

 Immediately after clicking on the <u>OK</u> button from the preceding step, the Advance AC'97 Audio Drivers and Applications Setup dialog box will appear on the screen. Just click on the <u>Next</u> > button to continue.

4. Once the InstallShield Wizard completes the operation and update of your AC'97 driver, it will ask you to remove any disks from their drives, and prompt you to restart your system. Tick on the **Yes**, I want to restart my computer now. Afterwards, click on the **Finish** button to complete the installation process. The system changes you made will take effect after the system restarts.

## 5.4.3 Win NT

- 1. Following steps 1 and 2 of the Win95/98 OR step 1 of Win 2000 AC97 installation, select **WINNT** button when the ALC100 dialog box appears on the screen.
- Select the language you intend to use for the installation. The default is **English**. After making your choice, press on the <u>OK</u> button to proceed.

 Immediately after clicking on the <u>OK</u> button from the preceding step, the Advance AC'97 Audio Drivers and Applications Setup dialog box will appear on the screen. Just click on the <u>Next</u> > button to continue.

4. Once the InstallShield Wizard completes the operation and update of your AC'97 driver, it will ask you to remove any disks from their drives, and prompt you to restart your system. Tick on the **Yes**, I want to restart my computer now. Afterwards, click on the **Einish** button to complete the installation process. The system changes you made will take effect after the system restarts.
