

SI-3000V Series**3-Terminal, Low Dropout Voltage Dropper Type****■Features**

- TO-3P package 3-terminal regulator
- Output current: 2.0A
- Low dropout voltage: $V_{DIF} \leq 1V$ (at $I_o=2.0A$)
- Built-in foldback overcurrent protection circuit

■Applications

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

**■Absolute Maximum Ratings**

*: A foldback type overcurrent protection circuit is built into the IC regulator. Therefore, avoid using it for the following applications as it may cause starting errors:

- (1) Constant current load (2) Plus/minus power (3) Series power (4) V_O adjustment by raising ground voltage

Plastic Mold Package Type (TO-3P)

Flammability: UL94V-0

Weight: Approx. 6g

■Block Diagram**■Standard External Circuit**

C1: Oscillation prevention capacitor (approx. 0.33μF)

Connection to terminal No.3 must be made as short as possible.

C2: Output capacitor (47 to 100μF)

Connection to terminal No.2 must be made as short as possible.

D1: Protection diode (RM1Z)

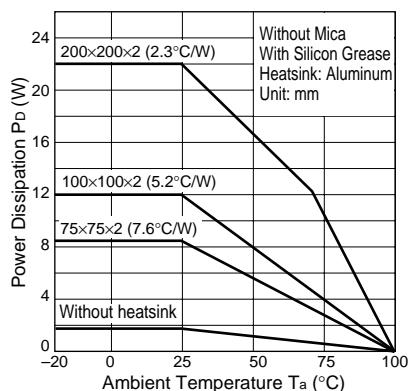

Required for protection against reverse biasing of input and output.

Note 1: Prevention of oscillation at low temperatures

At low temperatures, oscillation may occur unless an output capacitor with good tanδ is used. Be sure to connect a tantalum capacitor (approx. 10μF) in parallel with output capacitor C2.

Note 2: An isolation type diode is provided from input to ground and also from output to ground. These may be destroyed if the device is reverse biased. In this case, use a diode with low VF to protect them.

Note 3: The output voltage may not be adjusted by raising the ground voltage (using a diode or resistor).
