

# HiPerFETs

The HiPerFET family of Power MOSFETs is designed to provide superior  $dv/dt$  performance while eliminating the need for discrete, fast recovery "free wheeling" rectifiers in a broad range of power switching applications.

This new class of Power MOSFETs uses IXYS' HDMOS II process which improves the ruggedness of the FET while reducing the reverse recovery time of the intrinsic rectifier to less than 250 ns at elevated (150°C) junction temperature. The performance of the intrinsic rectifier is comparable to discrete high voltage rectifiers and is tailored to minimize power dissipation and stress in the MOSFET.

## HiPerFETs Offer Extended $dv/dt$ Ruggedness

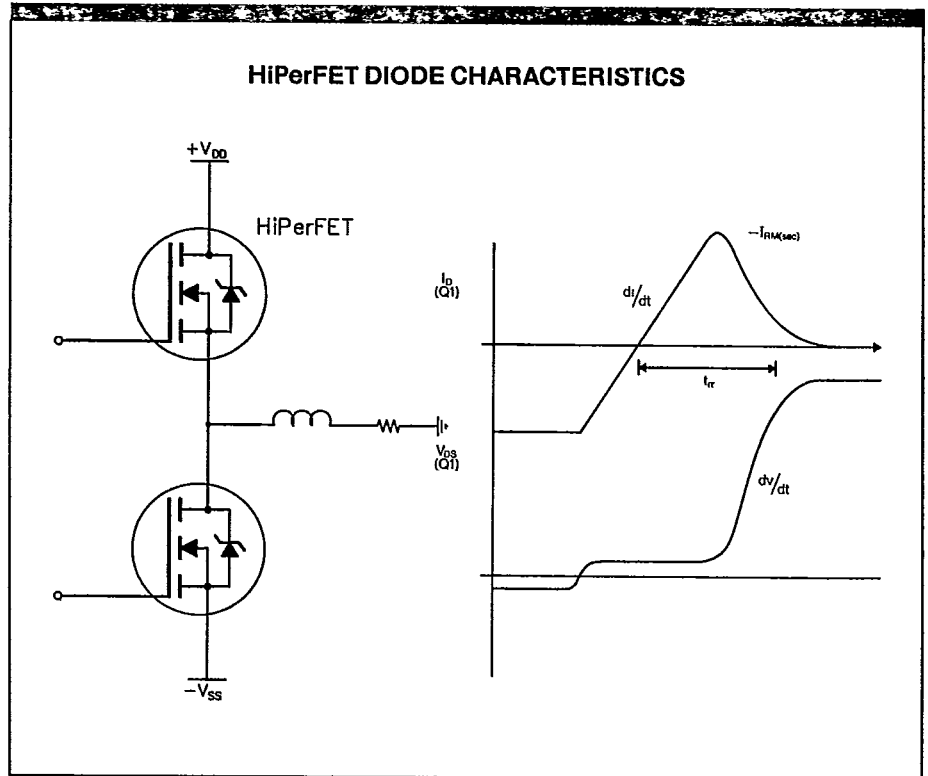

The HiPerFET series of Power MOSFETs have an extended stress capability in applications where the intrinsic "free-wheeling" diode is used. Both static and commutating  $dv/dt$  withstand capability have been improved tenfold to typically 50V/ns and 15V/ns respectively. These devices offer a significant margin of safety in high stress conditions found in many types of inductive power switching applications.

## HDMOS II Eliminates Tradeoffs

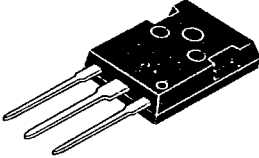

HDMOS II is a fifth generation power MOS technology developed by IXYS which incorporates the advantages of the original HDMOS process to achieve ultra low  $R_{DS(ON)}$ , high unclamped energy, and high transconductance. Additionally, HDMOS II includes proprietary lifetime control process to reduce the recovery time ( $t_{rr}$ ) of the intrinsic rectifier without increasing the on-resistance of the MOSFET. Also contained are enhancements to the MOSFET cell design which significantly improves  $dv/dt$  ruggedness.

## HiPerFETs Range From 450 to 1000 Volts

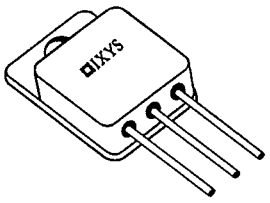

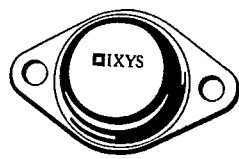

IXYS offers the broadest range of MOSFETs with high  $dv/dt$  ruggedness and usable diode characteristics. They are available in ratings of 26 amps at 500 volts and 12 amps at 1000 volts. Even if the application does not require use of the internal rectifier, HiPerFETs offer an extra measure of reliability in harsh inductive circuit environments such as DC motor controls, welders, sonar amplifiers and other Hi-Rel/military power conversion systems.
