

Low Noise, Dual EL Lamp Driver

General Description

The Supertex HV843DB1 demo board contains all necessary circuitry to demonstrate the features of the HV843 dual EL lamp driver.

Simply connect it to a power supply and a lamp as shown below. For additional assistance in designing EL driver circuits, please refer to application notes AN-H33 (effect of external components on performance of Supertex EL drivers).

Board Layout and Connection Diagram

Actual Size: 17.3mm x 14.4mm

Connections:

Controls C_1 and C_2 : Lamp Selection

Various modes of the device are selected via the C_1 and C_2 pins. When C_1 is connected to V_{DD}/GND , Lamp 1 (EL_1) will be ON/OFF. When C_2 is connected to V_{DD}/GND , lamp 2 (EL_2) will be ON/OFF. When both C_1 and C_2 are connected to GND, the device shuts down. These inputs may be connected to a mechanical switch, or to a logic circuit output that has a source impedance of less than 20k Ω .

V_{DD} : IC Supply

Supplies the HV843 EL driver IC. The supplied circuit is optimized for 3.0V operation.

V_{IN} : Inductor Supply

Supplies the high voltage power converter. The demoboard is optimized for 3.3V to 4.2V operation.

GND: Circuit Ground

Connect to V_{DD} and V_{IN} negative terminals. Supply bypass capacitor for both V_{DD} and V_{IN} are provided on the demo board. External supply bypass capacitors are not necessary.

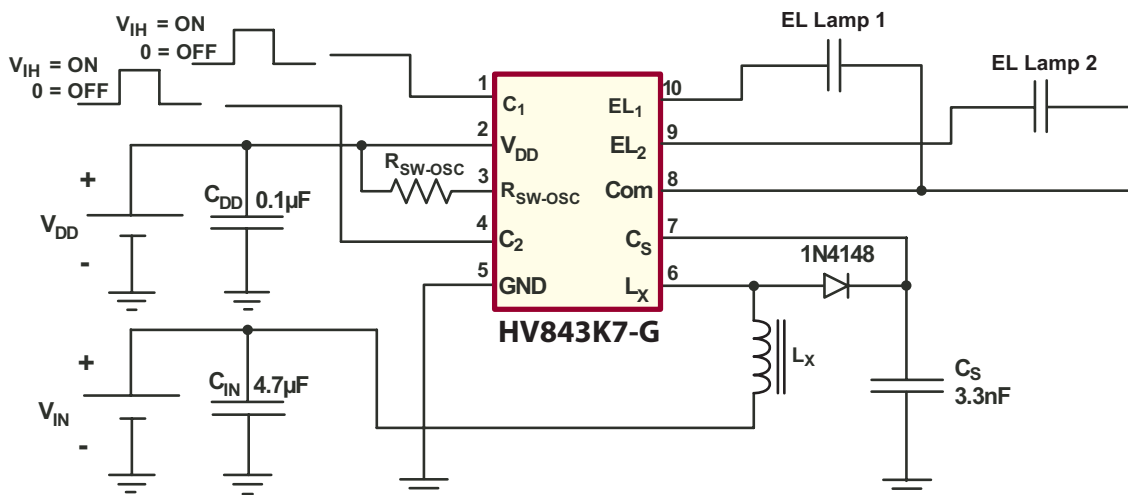

EL_1 and EL_2 : Lamp Connections

Connects to lamps 1 and 2. Polarity is irrelevant.

Com: Lamp Connections

Connects to the other side of lamps 1 and 2. Polarity is irrelevant.
