

## CD4069UBM/CD4069UBC Inverter Circuits

### General Description

The CD4069UB consists of six inverter circuits and is manufactured using complementary MOS (CMOS) to achieve wide power supply operating range, low power consumption, high noise immunity, and symmetric controlled rise and fall times.

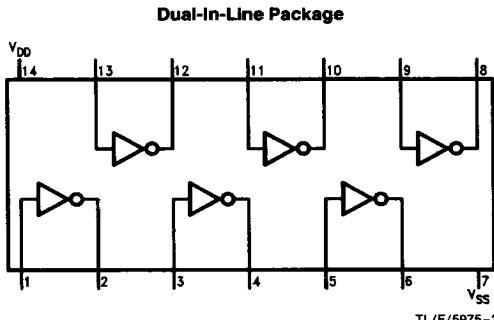

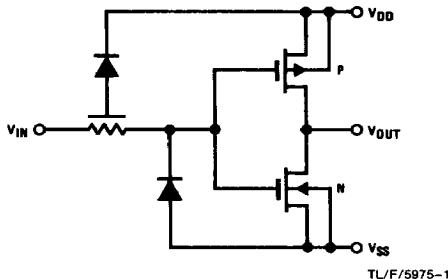

This device is intended for all general purpose inverter applications where the special characteristics of the MM74C901, MM74C903, MM74C907, and CD4049A Hex Inverter/Buffers are not required. In those applications requiring larger noise immunity the MM74C14 or MM74C914 Hex Schmitt Trigger is suggested.

All inputs are protected from damage due to static discharge by diode clamps to  $V_{DD}$  and  $V_{SS}$ .

### Features

- Wide supply voltage range      3.0V to 15V
- High noise immunity      0.45  $V_{DD}$  typ.
- Low power TTL compatibility      Fan out of 2 driving 74L or 1 driving 74LS
- Equivalent to MM54C04/MM74C04
