# SOLDERING PROCESS RECOMMENDATION GUIDE

AUGAT/ INTCON PRDT GP 49E D 🎟 1095335 0001533 628 🖿 AUIP 🔿

The majority of customers utilizing miniature or sub miniature switches in the industry today have a great concern about the switches capabilities during their soldering and cleaning cycles. This concern centers around the introduction of contaminates into the switch contact area which could cause the switch to experience various failure modes either immediately or during the life cycle of the switches usage. These failure modes can show in a number of manners. The following are just a few examples: high contact resistance, open contacts, low dielectric strength breakdown, and high actuation forces causing use related applications to malfunction. Since most fluxes become active with the introduction of the high temperatures used in all soldering techniques, the switch must either prevent these fluxes from entering into its contact area or allow cleaning techniques to carry flux particles out. It must be understood that switch contamination can occur during any procedure: from hand soldering to the new age Surface Mount systems using vapor phase , I.R., or Convection chambers for solder reflow.

We at Augat/Alcoswitch offer a wide range of switches to handle any soldering operations. However, certain soldering conditions will not apply to all switches. The following conditions and charts should help assist you in the soldering of our switches in your application. If you need additional information, feel free to contact the factory.

### SOLDERING TYPES

### A. Wave Soldering:

Top & Bottom board preheats: 200°F(93°C) for approximately 3 to 4 minutes. Solder Temperature and Dwell Time: 500°F(260°C) for approximately 3 to 5 seconds.

### **B. Hand Soldering**

- 1. 500°F-600°F(260°C-316°C)utilizing a controlled 40 Watt iron for 3 to 5 seconds maximum.
- 2. 500°F(260°C) utilizing a controlled 30 Watt iron for 10 seconds maximum.

### C. Dip Soldering

Solder Temperature & Dwell Time: 500°F(260°C) for 10 seconds maximum.

### **D.Surface Mount**

1. Convection IR

Zone 1 = 212°F(100°C) for 120 seconds maximum. Zone 2 = 419°F(215°C) is reaches in approximately 160 seconds after zone 1, and held at that temperature for approximately 10 seconds.

### 2. Radiant IR

Zones 1 & 2 combined =  $330^{\circ}F(166^{\circ}C)$  maximum with a total run of  $210^{\circ}C(99^{\circ}C)$  seconds. Zone 3 & 4 combined =  $460^{\circ}F(238^{\circ}C)$  is reached in approximately 30 seconds after zones 1 & 2 and held at that temperature for approximately 10 seconds.

3. Vapor Phase

Zone  $1 = 140^{\circ}F$  (60°C) for 15 seconds. Zone  $2 = 419^{\circ}F(215^{\circ}C)$  for 30 seconds.

### **CLEANING TYPES**

- A. Solvent Wash (1.1.1 Trichlorethylene, T.M.S., T.M.C.)
- B. Vapor Degreasing
- C. Solvent Immersion
- D. Aqueous Cleaning

SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE.

AA/C Series/Dip Switch Integral Diodes - ATT Series/Dip Switch with Integral **Attenuator Network** 

### **SPECIFICATIONS**

ELECTRICAL	
Contact Rating:	0.4VA at 20VDC max.
Initial Contact Resistance:	
Insulation Resistance:	1000 megohms min. at 100VDC
Dielectric Strength:	

less than 800 grams
5,000 cycles
1.30mm/.050" piano style 25°
ATT Series 1.50mm/.060"
800 grams max.

### MATERIALS

Base:	PBT encapsulated ceramic
Cover:	PBT 94 V-O
Actuator:	PBT 94 V-O
Moving Contact:	gold flashed Beryllium copper
Fixed Contact & Terminal:	AD Series: solder coated brass
ATT & AA/C Series + Hybrid s	surface mount:gold flashed brass

\_\_\_\_\_

Operating Force:less than 800 grams	Ope
Life Expectancy:	Stor
Actuator Travel: AD/R/C/A Series 1.30mm/.050" piano style 25°	Solo
ATT Series 1.50mm/.060"	
Actuator Force:	
-	

ENVIRONMENTAL	
Operating Temperatures:	
Storage Temperature:	45°C to 100°C
Solder Heat Resistance: 245°C± 5°C w	vith switch in "off" position

30 seconds when mounted on a .060" thick PCB Cleaning: ..... Aqueous solution or solvent
