LEVEL-SHIFTED GAS DISCHARGE DISPLAY DIGIT DRIVERS

DI-505B DI-510B

General Description:

The DIONICS DI-505B and DI-510B series circuits are designed for interfacing between MOS or TTL circuitry and gas discharge display panels. Each section of these devices is made up of a switched constant current level shifter-capable of high voltage operation and a PNP-NPN driver transistor pair. The constant current operation of the level shifter stage results in low power dissipation. Input circuitry is suitable for open drain PMOS, CMOS, open-collector or standard TTL.

Features:

- ✓ 200V Level Shift Capability
- ✓ MOS and TTL Compatibility
- ✓ 6- and 8-line Versions
- ✓ Low Power Dissipation
- ✓ Reliable Dielectric Isolation Process
