

8-Channel/Differential 4-Channel, CMOS High Speed Analog Multiplexer

August 1997

Features

- Access Time (Typical) 130ns
- Settling Time 250ns (0.1%)
- Low Leakage (Typical)
 - $I_{S(OFF)}$ 10pA
 - $I_{D(OFF)}$ 15pA
- Low Capacitance (Max)
 - $C_{S(OFF)}$ 5pF
 - $C_{D(OFF)}$ 10pF
- Off Isolation at 500kHz 45dB (Min)
- Low Charge Injection Error 25mV
- Single Ended to Differential Selectable (SDS)
- Logic Level Selectable (LLS)

Applications

- Data Acquisition Systems
- Precision Instrumentation
- Industrial Control

Description

The HI-518 is a monolithic, dielectrically isolated, high speed, high performance CMOS analog multiplexer. It offers unique built-in channel selection decoding plus an inhibit input for disabling all channels. The dual function of address input A_2 enables the HI-518 to be user programmed either as a single ended 8-Channel multiplexer by connecting 'Out A' to 'Out B' and using A_2 as a digital address input, or as a 4-Channel differential multiplexer by connecting A_2 to the V_- supply. The substrate leakages and parasitic capacitances are reduced substantially by using the Harris Dielectric Isolation process to achieve optimum performance in both high and low level signal applications. The low output leakage current ($I_{DOFF} < 100pA$ at $25^{\circ}C$) and fast settling ($t_{SETTLE} = 800ns$ to 0.01%) characteristics of the device make it an ideal choice for high speed data acquisition systems, precision instrumentation, and industrial process control.

Temperature Ranges

HI-518-2,-8	-55°C to 125°C
HI-518-5	0°C to 75°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.

NOTES:

1. V_{DD}/LLS pin = open or grounded for TTL compatibility. V_{DD}/LLS pin = V_{DD} for CMOS compatibility.
2. At temperatures above 90°C, care must be taken to assure V_{IN} remains at least 1.0V below the V_{SUPPLY} for proper operation.
3. $V_{IN} = \pm 10V$, $I_{OUT} = -100\mu A$.
4. $V_{IN} = 0V$, $C_L = 100pF$, enable input pulse = 3V, $f = 500kHz$.
5. $C_L = 40pF$, $R_L = 1K$. Due to the pin to pin capacitance between IN 8/4B and OUT B, channel 8/4B exhibits 60dB of OFF isolation under the above test conditions.
6. $V_{EN} = +2.4V$.
