

Am27LS07

64-Bit Low-Power Noninverting-Output Bipolar RAM

DISTINCTIVE CHARACTERISTICS

- Fully decoded 16-word x 4-bit low-power Schottky RAMs
- Internal ECL circuitry for optimum speed/power performance over voltage and temperature
- Output preconditioned during write to eliminate the write recovery glitch
- Available with three-state outputs (Am27LS07)
- Electrically tested and optically inspected die for the assemblers of hybrid products

GENERAL DESCRIPTION

The Am27LS07 is a 64-bit FIAM built using Schottky diode clamped transistors in conjunction with internal ECL circuitry and is ideal for use in scratch pad and high-speed buffer memory applications. Each memory is organized as a fully decoded 16-word memory of 4 bits per word. Easy memory expansion is provided by an active LOW chip select (CS) input and three-state outputs.

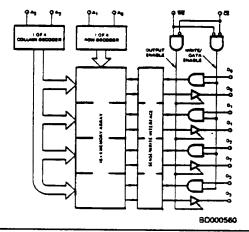

An active LOW Write line (\overline{WE}) controls the writing/reading operation of the memory. When the chip select and write lines are LOW the information on the four data inputs D_0 to D_3 is written into the addressed memory word and precon-

ditions the output circuitry so that correct data is present at the outputs when the write cycle is complete. This preconditioning operation insures minimum write recovery times by eliminating the "write recovery glitch."

Reading is performed with the chip select line LOW and the write line HIGH. The information stored in the addressed word is read out on the four noninverting outputs O_0 to O_3 .

During the writing operation or when the chip select line is HIGH the four outputs of the memory go to an inactive high impedance state.

ORDERING INFORMATION

Standard Products

AMD standard products are available in several packages and operating ranges. The order number (Valid Combination) is formed by a combination of: a. Device Number

- b. Speed Option (if applicable)
- c. Package Type
- d. Temperature Range
- e. Optional Processing

Valid Combinations

Valid Co	ombinations
AM27LS07	PC. PCB. OC. DC8

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local AMD sales office to confirm availability of specific valid combinations, to check on newly released combinations, and to obtain additional data on AMD's standard military grade products.

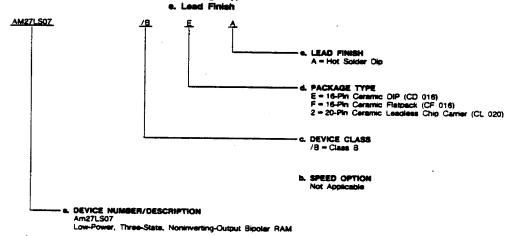

ORDERING INFORMATION (Cont'd.)

APL Products

AMD products for Aerospace and Defense applications are available in several packages and operating ranges. APL (Approved Products List) products are fully compliant with MIL-STD-883C requirements. The order number (Valid Combination) for APL products is formed by a combination of: a. Device Number

- b. Speed Option (if applicable)
- c. Device Class
- d. Package Type

Valid Co	ombinations
AM27LS07	/8EA, /BFA, /B2A

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local AMD sales office to confirm availability of specific valid combinations or to check for newly released valid combinations.

Group A Tests

Group A tests consist of Subgroups 1, 2, 3, 9, 10, 11.

ABSOLUTE MAXIMUM RATINGS

Storage Temperature -65 to +150°C Ambient Temperature with Power Applied -55 to + 125°C Supply Voltage -0.5 V to +7.0 V DC Voltage Applied to Outputs.....-0.5 V to +VCC Max. DC Input Voltage -0.5 V to +5.5 V Output Current into Outputs20 mA DC Input Current-30 mA to +5 mA

Stresses above those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to absolute maximum ratings for extended periods may affect device reliability.

OPERATING RANGES

Commercial (C) Devices	
Temperature	0 to +75°C
Supply Voltage	+4.75 V to +5.25 V
Military* (M) Devices	
Temperature	55 to +125°C
Supply Voltage	+4.5 V to +5.5 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

* Military Product 100% tested at T_C = +25°C, +125°C, and -55°C.

(See Note 4)

DC CHARACTERISTICS over operating ranges unless otherwise specified (for APL Products, Group A, Subgroups 1, 2, 3 are tested unless otherwise noted)

Notes: 1. Typical limits are at VCC = 5.0 V and TA = 25°C.

2. These are absolute voltages with respect to device ground pin and include all overshoots due to system and/or tester noise. Do not attempt to test these values without suitable equipment,

3. Not more than one output should be shorted at a time. Duration of the short circuit should not be more than one second.

4. Operating specification with adequate time for temperature stabilization and transverse air flow exceeding 400 linear teet per minute. Conformance testing performed instantaneously where $T_A = T_C = T_J$. $\theta_{\rm JA} \approx 50^{\circ}{\rm GW}$ (with moving air) for Ceramic OIP. $\theta_{\rm JC} \approx 10-17^{\circ}{\rm GW}$ for flatpack and leadless chip carrier.

write recovery gitton.)

2. $\text{Tp}_{LH}(A)$ and $\text{Tp}_{LL}(A)$ are tested with S_1 closed and $C_L = 30$ pF with both input and output timing referenced to 1.5 V.

3. For 3-state output, $\text{Tp}_{ZL}(WE)$ and $\text{Tp}_{ZL}(CS)$ are measured with S_1 open, $C_L = 50$ pF and with both the input and output timing referenced to 1.5 V. $\text{Tp}_{ZL}(WE)$ and $\text{Tp}_{ZL}(CS)$ are measured with S_1 open and $C_L \le 5$ pF and are measured between the 1.5 V level on the input to the $\text{Vo}_{H} = 500$ mV level on the output, $\text{Tp}_{ZL}(WE)$ and $\text{Tp}_{ZL}(CS)$ are measured with S_1 open and $S_2(CS)$ are measured with S_1 closed and $S_2(CS)$ are measured with S_1 closed and $S_2(CS)$ are measured with $S_2(CS)$ and $S_2(CS)$ are meas

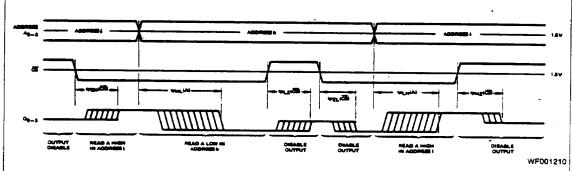

WF001111

Write Mode

Write Cycle Timing. The cycle in initiated by an address change. After t₅(A)min, the write enable may begin. The chip select must also be LOW for writing. Following the write pulse, th(A)min must be allowed before the address may be changed again. The output will be floating for the Am27LS07 while the write enable is LOW.

Read Mode

Switching delays from address and chip select inputs to the data output. For the Am27LS07, disabled output is "OFF", represented by a single center line.
