

The 'F350 is a specialized multiplexer that accepts a 4-bit word and shifts it 0, 1, 2 or 3 places, as determined by two Select (S_0, S_1) inputs. For expansion to longer words, three linking inputs are provided for lower-order bits; thus two packages can shift an 8-bit word, four packages a 16-bit word, etc. Shifting by more than three places is accomplished by paralleling the TRI-STATE outputs of different packages and using the Output Enable ($\overline{OE}$) inputs as a third Select level. With appropriate interconnections, the 'F350 can perform zero-backfill, sign-extend or end-around (barrel) shift functions.

- Linking inputs for word expansion
- TRI-STATE outputs for extending shift range

Functional Description

The 'F350 is operationally equivalent to a 4-input multiplexer with the inputs connected so that the select code causes successive one-bit shifts of the data word. This internal connection makes it possible to perform shifts of 0, 1, 2 or 3 places on words of any length.

A 4-bit data word is introduced at the I_n inputs and is shifted according to the code applied to the select inputs S_0, S_1 . Outputs O_0-O_3 are TRI-STATE, controlled by an active LOW output enable ($\overline{OE}$). When $\overline{OE}$ is LOW, data outputs will follow selected data inputs; when HIGH, the data outputs will be forced to the high impedance state. This feature allows shifters to be cascaded on the same output lines or

to a common bus. The shift function can be logical, with zeros pulled in at either or both ends of the shifting field; arithmetic, where the sign bit is repeated during a shift down; or end around, where the data word forms a continuous loop.

Logic Equations

$$O_0 = \overline{S_0}\overline{S_1}I_0 + S_0\overline{S_1}I_{-1} + \overline{S_0}S_1I_{-2} + S_0S_1I_{-3}$$

$$O_1 = \overline{S_0}\overline{S_1}I_1 + S_0\overline{S_1}I_0 + \overline{S_0}S_1I_{-1} + S_0S_1I_{-2}$$

$$O_2 = \overline{S_0}\overline{S_1}I_2 + S_0\overline{S_1}I_1 + \overline{S_0}S_1I_0 + S_0S_1I_{-1}$$

$$O_3 = \overline{S_0}\overline{S_1}I_3 + S_0\overline{S_1}I_2 + \overline{S_0}S_1I_1 + S_0S_1I_0$$
