The BU1924 and BU1924F are RDS / RBDS decoders that employ a digital PLL and have a built-in anti-aliasing filter and an eight-stage BPF (switched-capacitor filter). Linear CMOS circuitry is used for low power consumption.

● Applications

RDS / RBDS compatible FM receivers for American and European markets, car stereos, high-fidelity stereo systems and components, and FM pagers.

● Features

- 1) Low current.
- 2) Two-stage anti-aliasing filter (LPF).
- 3) 57kHz band-pass filter.
- 4) DSB demodulation (digital PLL).
- 5) Quality indication output for demodulated data.

● **Output data timing**

The clock (RCLK) frequency is 1187.5Hz. Depending on the state of the internal PLL clock, the data (RDATA) is replaced in synchronous with either the rising or falling or falling edge of the clock. To read the data, you may choose either the rising or falling edge of the clock as the reference. The data is valid for 416.7μs. after the reference clock edge.

QUAL pin operation : Indicates the quality of the demodulated data.

- (1) Good data : HI
- (2) Poor data : LO
