

- ◇Structure Silicon Monolithic integrated circuit
- ◇Product name Audio interface + Video driver + POL + RTC LSI
- ◇Type BU76294GUW
- ◇Applications DSC, etc
- ◇Functions
 - <Audio part>
 - Monaural・16 bit $\Delta \Sigma$ CODEC
 - Monaural microphone amplifier with ALC function
 - Monaural line amplifier
 - BTL output speaker amplifier (300mW@8 Ω , THD+N=10%, VDD=3.0V)
 - 64-step electronic volume with ALC function
 - PLL built-in(Reference clock: 12MHz, 24MHz, 27MHz, 16fs, 32fs, 64fs)
(sampling rate: 8kHz ~ 48kHz)
 - Four-line serial interface (power on reset function)
 - Audio IF format MSB First, 2's compliment
 - <ADC> 16bit word lengths Left justified, I²S
 - <DAC> 16bit word lengths Left, Right justified, I²S
 - <Video part>
 - Sync-tip-clamp, LPF, 6dB Amplifier
 - Output coupling condenser unnecessary
 - <Boot system>
 - Step up charge pump: 1ch, Voltage detect circuit: 4ch built-in
 - <RTC part>
 - 32bit counter built-in
 - 128bit back up register built-in

◇Absolute maximum ratings (Ta=25°C)

Parameter	Symbol	Limits	Unit	Comment
Supply voltage	VDD	-0.3~4.5	V	AVDD, IOVDD, SPVDD, VVDD
DVDD Supply voltage	DVDD	-0.3~2.5	V	DVDD
UNREG Supply voltage	UNREG	-0.3~6.0	V	UNREG
BATT Supply voltage	BATT	-0.3~4.5	V	BATT
Input voltage	VIN	-0.3~supply voltage +0.3	V	keep each limits upon
Storage temperature range	TSTG	-50~125	°C	
Operating temperature range	TOPE	-20~85	°C	
Power dissipation *1	PD	800*1	mW	

* 1: In the case of use at Ta=25°C or more, 8mW should be reduced per 1°C.

(t=1.6mm, 114.3mm x 76.2mm, board base on SEMI, 4-layer board)

Radiation resistance design is not arranged.

◇Operating conditions (Ta=25°C)

Parameter	Symbol	Limits	Unit	Comment
Supply voltage	VDD	2.7~3.6	V	AVDD, IOVDD, SPVDD, VVDD
DVDD Supply voltage	DVDD	1.62~1.98	V	DVDD
UNREG Supply voltage	UNREG	1.7~5.5	V	UNREG
BATT Supply voltage	BATT	2.0~3.3	V	BATT

(note) Please do not set SPVDD lower than AVDD-0.3V.

(note) Please do not surpass package permissible loss, when SPVDD is set.

◆ Pin Functional Descriptions

Pin name	function	Pin name	function
AVDD	Analog power supply	RTCGND	GND for RTC
AVSS	Analog ground	RESETIN	RESET voltage detective output
BIAS	Bias	UVLO	UVLO voltage detective input
MREG	Regulator for MIC	RESETOUT	Reset output
MICIN	MIC input	ACT	ACT input
LNF	MIC NF input	PWRSW0	Power SW0 input
LINEOUT	LINE output	PWRSW1	Power SW1 input
EVROUT	EVR output	PWRCTRL0	Power control0 output
SPIN	SP input	PWRCTRL1	Power control1 output
SPNEG	SP negative output	PMG_VBAT_DA	Voltage monitor output
SPPOS	SP positive output	PWRSW_STATE	Power SW output
SPVDD	SP power supply	DVDD	Digital power supply
SPVSS	SP ground	IOVDD	Digital IO power supply
VVDD	Video driver power supply	FCLK	CODEC frame clock input
VVSS	Video driver ground	BCLK	CODEC bit clock input
VIN	Video driver input	DAIN	CODEC DA serial data input
VOUT	Video driver output	ADOUT	CODEC DA serial data output
UNREG	UNREG voltage input	MCLK	Master clock input
CPOUT	Step up pulse output	DVSS	Digital GND
FBREG	Step up voltage output	SCLK	Serial clock input
EV3	Regulator output	CSB	Serial chip select input
BATT	Back up power supply	SDATA	Serial data input
XIN	Crystal oscillation input	SOUT	Serial data output
XOUT	Crystal oscillation output	TEST	Test terminal

◇Caution

(1) About absolute maximum rating

When the absolute maximum rating such as the applied voltage and the ranges of the operating temperature is exceeded, LSI might be destroyed. Please apply neither voltage nor the temperature that exceeds the absolute maximum rating.

Please execute physical measures for safety such as fuse when it is thought to exceed the absolute maximum rating, and examine it so that the condition to exceed the absolute maximum rating is not applied to LSI.

(2) About GND Voltage

In any state of operation must be the lowest voltage about the voltage of the terminal GND. Please actually confirm the voltage of each terminal is not a voltage that is lower than the terminal GND including excessive phenomenon.

(3) About design of overheating malfunction preventive circuit

Please design overheating malfunction preventive circuit with an enough margin in consideration of a permissible loss in the state of using actually.

(4) About the short between terminals and the mounting by mistake

Please note the direction and the gap of position of LSI enough about LSI when you mount on the substrate. LSI might be destroyed when mounting by mistake and energizing. Moreover, LSI might be destroyed when short-circuited by entering of the foreign substances between the terminal and GND, between terminals, between the terminal and the power supply of LSI.

(5) About operation in strong electromagnetic field

Use in strong electromagnetic field has the possibility of malfunctioning and evaluate it enough, please.

(6) Please note not to be beyond the package permissible range. When SPVDD is set.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.
